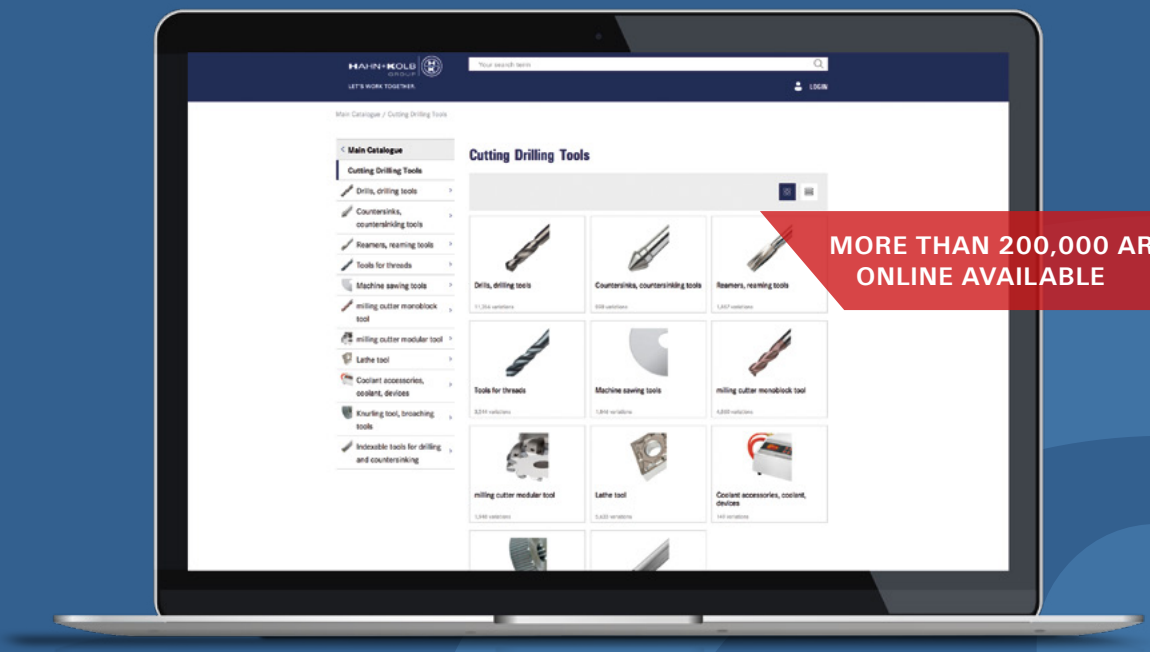
VISIT OUR ONLINE SHOP

WWW.HAHN-KOLB.COM



MORE THAN 200,000 ARTICLES ONLINE AVAILABLE

The HAHN+KOLB Online Shop: Easily accessible at any time

You will find even more products in our online shop. Over 200,000 products await you. Use the various filter options to find the item you want quickly and easily at any time. Our homepage provides information on our regularly changing special offers as well as events and new products in our range.

To make your shopping experience even better, our online shop features highlights that you will love:

- Individual prices and company conditions
- Display your own material numbers
- Intelligent user management system including budget management, approval workflows, etc.
- Order overview
- Additional information such as CAD and cutting data
- Availability display, delivery tracking and the option to request a delivery date
- Dispatch of in stock items within 12 hours
- Paperless ordering

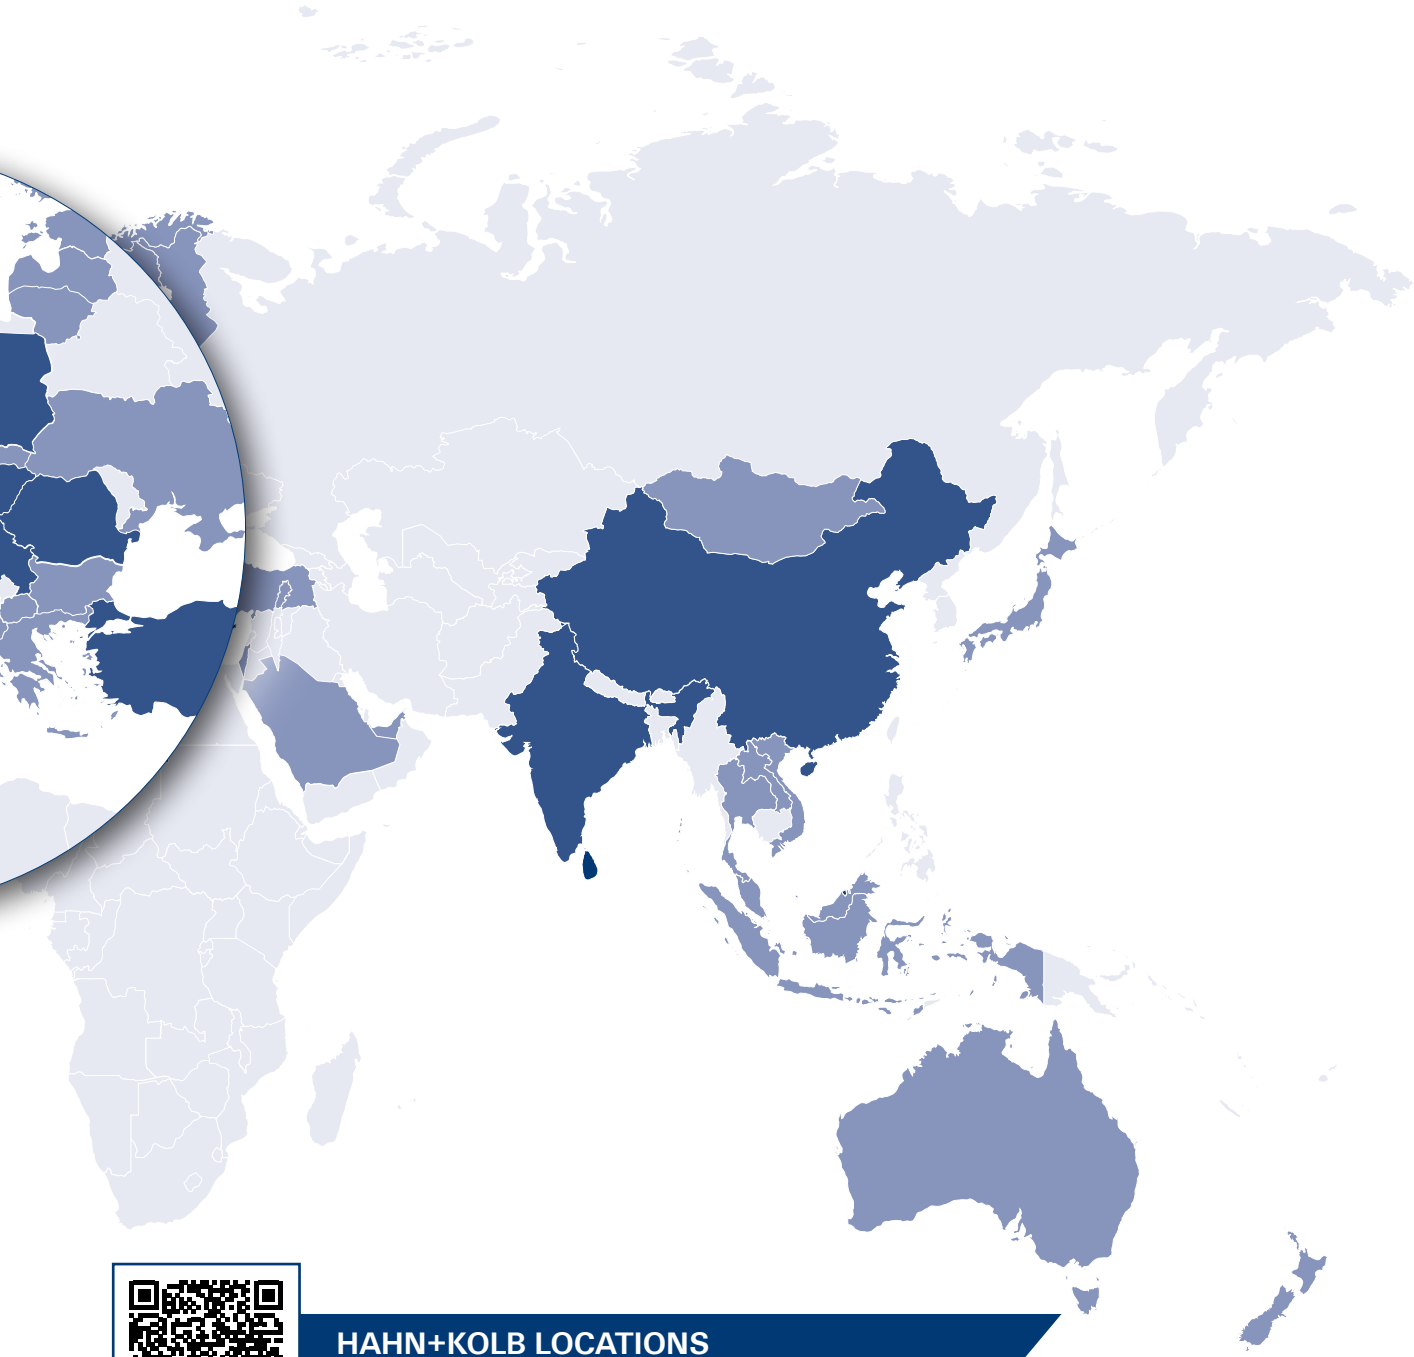
HAHN+KOLB WORLDWIDE

HAHN+KOLB is represented on every continent. With HAHN+KOLB companies in 14 countries and sales partners in more than 40 countries, we are serving more than 60 countries all around the world. The HAHN+KOLB Group employs more than 800 employees worldwide, who are always in full activity to offer the first-class service that you have come to expect from us.



HAHN+KOLB LOCATIONS
WE ARE THERE FOR YOU. WHEREVER YOU ARE.

HAHN+KOLB IN GERMANY

Everything started in 1898: Hermann Hahn and Adolf Kolb founded a company that soon became known as a specialist in tools and machines. The company has applied the highest standards right from the start and these still apply today: maximum quality, customer-oriented service, and first-class products. The first, handwritten HAHN+KOLB tool catalogue, published in 1904, soon became a printed catalogue packed full of products. Nowadays the complete range is online available with more than 100,000 items. HAHN+KOLB is one of the leading companies in the tool and machine industry. Since 2013, the company manages its worldwide operations from the company headquarters in Ludwigsburg. Spanning 48,000 square metres, these headquarters include the distribution centre, the technology centre, and the logistics building.

HAHN+KOLB IN AUSTRIA

Since METZLER GmbH & Co. KG was founded in 1990, the company has become a major name in the distribution of tools and manufacturing solutions. The company is part of the HAHN+KOLB Group and is located in Röthis in the heart of Europe – at the point where Germany, Austria and Switzerland meet. METZLER serves the entire metal working and processing industry in the Austrian market. Its range of products also include in-house developments such as the innovative hard foam solutions OPT-I-STORE and the CLIP-O-FLEX flexible mounting system. Both of these solutions are produced in-house by METZLER, ensure greater organisation and quality in production, and are available worldwide.

HAHN+KOLB IN SERBIA

HAHN+KOLB Serbia was founded in 2004 as an independent subsidiary of HAHN+KOLB Werkzeuge GmbH. Today, HAHN+KOLB DOO is the leading tool distributor and service provider in Serbia. In the Serbian market, the company is known as a reliable and expert partner focusing on maximum customer orientation. The product catalogue supports the sales team, and presents the HAHN+KOLB DOO portfolio in the local language. HAHN+KOLB DOO is working with a calibration service and measurement laboratory to calibrate length gauges in order to further increase the service offering.

HAHN+KOLB IN THE BENELUX COUNTRIES

In early 2015, a ten-person team started their work at the location in Almelo, Netherlands. This office serves customers in the Netherlands, Belgium and Luxembourg with the full HAHN+KOLB range. The experts in the fields of machining, measurement technology, clamping technology, and hand tools primarily serve customers from the mechanical engineering sector. The focus is not only on the product range, but on comprehensive services such as tool procurement, workshop planning, and advice on lean management.

HAHN+KOLB IN POLAND

The HAHN+KOLB subsidiary in Poland was created in 1998 following the acquisition of an established company on the Polish market, whose core competence was measuring instruments and tools. Since 1998, HAHN+KOLB Polska has been supplying its customers both with the entire HAHN+KOLB product range and with customised solutions. The company also installs machinery and workshop equipment and conducts specific training courses. It is available to provide its customers with helpful advice about the products at all times and uses its DEMOCAR presentation vehicle to present machines and tools to potential new customers.

HAHN+KOLB IN ROMANIA

HAHN+KOLB Romania was founded in 2005 with the aim of supplying the local market with high-quality and professional tools at attractive prices. In the steadily improving economic environment, HAHN+KOLB Romania has strengthened its market position and is known as a reliable business partner on the Romanian market.

HAHN+KOLB IN TURKEY

The Turkish branch of HAHN+KOLB was founded in 2014. The company based in Istanbul supplies Turkish customers with the entire HK quality range. Delivery of all items in stock is guaranteed within two days of receiving the order. Since the company was founded, it has become well-known for the reliability of its products and services: The recognition and popularity of HAHN+KOLB in Turkey are steadily increasing.

HAHN+KOLB IN FRANCE

HAHN+KOLB France is located in the heart of the Alsace region. Founded in 1999, the branch serves the whole country with the full HAHN+KOLB range, targeting major clients in particular. Thanks to its immediate proximity to the head office in Germany, HAHN+KOLB France benefits from direct delivery from the German warehouse, and can therefore offer its customers lightning-fast delivery times and extensive delivery capabilities.

HAHN+KOLB IN HUNGARY

The subsidiary HAHN+KOLB Hungária Kft. was founded in Budapest in 2001. The company has developed dynamically from the very beginning and is able to build on a steadily growing customer base. In 2012, the “Key Account Division” was established, offering customers the optimum comprehensive service and the best possible support. The company is also known for its particularly creative and innovative solutions.

HAHN+KOLB IN MEXICO

In August 2015, HAHN+KOLB opened its branch in Puebla, Mexico. HAHN+KOLB supplies the Mexican market with the entire HAHN+KOLB product range from the country’s fourth-largest city, where old and new Mexico meet. In Puebla, many big players of the industry have located their subsidiaries, so HAHN+KOLB is in close proximity to considerable customers. The continuously growing company offers expert advice and further local services.

HAHN+KOLB IN INDIA

HAHN+KOLB India was founded in 2007 in one of the world's fastest growing markets. The company is based in Pune, also known as the "Detroit of the East": Not only automotive manufacturers such as Daimler, VW, GM, and Tata Motors do have their head offices there, but also numerous suppliers. From Pune, HAHN+KOLB India has established itself throughout the sub-continent, with local representatives for customers in cities such as Chennai, Bangalore, and Vadodara. This presence is particularly important because most Indian buyers prefer to hold the products in their hands before making a decision.

HAHN+KOLB IN CHINA

In 2001, HAHN+KOLB entered the Chinese market in order to offer personal consultation and services on site to Chinese customers. Since then, the Chinese subsidiary has been serving and supplying the market. Nowadays, HAHN+KOLB in China enjoys an excellent reputation for the quality of its services and products.

drilling tools coatings

Titanium nitride

TiN

- Universal layer for machining in ferrous metals and steel materials
- Very high cutting speed, high level of accuracy
- High level of hardness and adhesion
- Good resistance to chemicals
- Low edge rounding
- Good temperature resistance in air
- Relatively low heat conductivity
- Titanium nitride has a low level of reactivity toward ferrous metals. Tool wear through galling is therefore significantly reduced.

Technical data:

- Vickers hardness: 2200-2300 HV
- Friction coefficient: 0.5
- Temperature resistance: 500-600°
- Colour: gold
- Coating method: PVD

Titanium aluminium nitride

TiAlN

- Universal coating for high-performance machining with high cutting speeds
- Thermally and chemically very stable
- Dry machining
- Very high hardness
- Very good heat resistance
- Relatively low heat conductivity

Technical data:

- Vickers hardness: 3200 HV
- Steel friction coefficient: 0.55
- Temperature resistance: 900-1000°
- Colour: dark blue grey
- Coating method: PVD

TiNAlOX

TiNAlOX

- Universal coating for high-performance machining with high cutting speeds
- Can be described as a multi-range laminate, as it can be used in a wide range of applications from steel machining to the machining of stainless steels right through to cast iron machining with a high level of success
- Extremely smooth
- Thermally and chemically very stable
- Very high hardness
- Very good heat resistance
- Relatively low heat conductivity

Technical data:

- Vickers hardness: 3500 HV
- Steel friction coefficient: 0.5
- Temperature resistance: 1000-1100°
- Colour: blue-violet
- Coating method: PVD

TiAlN Plus

TiAlN plus

- Universal coating for high-performance machining of steels and cast iron
- Wear-resistant multi-layer coating
- Extremely smooth
- Thermally and chemically very stable
- Very high hardness
- Good heat resistance

Technical data:

- Vickers hardness: 3300 HV
- Steel friction coefficient: 0.6
- Temperature resistance: 800°
- Colour: grey-purple
- Coating method: PVD

ULTRA M

ULTRA M

- Special coating for high-performance machining of stainless steels and steels
- Wear-resistant multi-layer material
- Extremely smooth
- Thermally and chemically very stable
- Very high hardness
- Very good heat resistance

Technical data:

- Vickers hardness: 3400 HV
- Steel friction coefficient: 0.55
- Temperature resistance: 900°
- Colour: grey-purple
- Coating method: PVD

ULTRA N-Pro

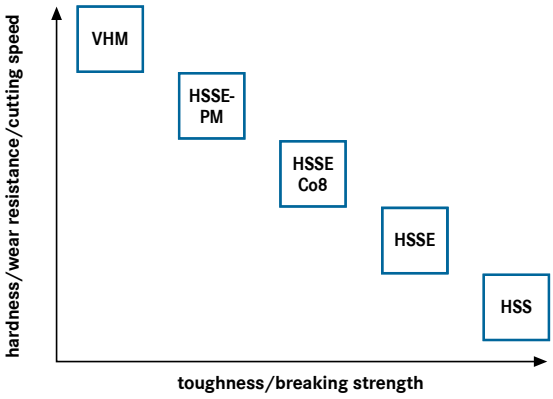
ULTRA N PRO

- Special coating for high-performance machining of non-ferrous metals
- The high wear resistance increases the service life of the tools and reduces the need for frequent replacement and maintenance
- Minimises heat generation and improves machining efficiency
- Suitable for high-speed machining, performance is maintained even under extreme conditions

Technical data:

- Steel friction coefficient: >0.10
- Temperature resistance: >500°
- Colour: Rainbow
- Coating method: PVD

drilling tools cutting materials



Solid carbide
- Very high hardness
- For applications up to 65 HRC
- Very high cutting speed
- High precision

HSSE-PM high-speed steel powder metal
- For applications up to 1300 N/mm²
- Medium to high cutting speeds
- Highly elastic

HSSE Co8 high-speed steel
- For applications up to 1300 N/mm²
- Medium to high cutting speeds
- Approx. 8 % cobalt content
- Extremely high elasticity

HSSE high-speed steel
- For applications up to 1300 N/mm²
- Low to medium cutting speeds
- Approx. 5 % cobalt content
- Extremely high elasticity

HSS high-speed steel
- For applications up to 1000 N/mm²
- Low cutting speeds
- Low alloy content
- Extremely high elasticity

Drilling tool geometries

HPC UNI

Grinding/geometry:
- Tip angle 140°
- 4-facet point
- Helix angle 30°
- Two margins for 3xD and 5xD
- Four margins for 8xD and 12xD
- Dia. tolerance h7 or m7

Advantages:
- These geometries have been specially developed for universal use
- The various coatings with cutting edge preparation prevent micro-breakouts on the cutting edge, thereby increasing the service life

HPC VA

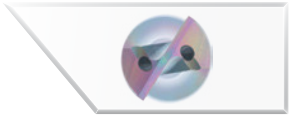
Grinding/geometry:
- Tip angle 140°
- For HPC bore machining in the stainless steel, titanium, nickel and special alloy material groups
- 4-facet point
- Helix angle 30°
- 2 margins
- Dia. tolerance m7

Advantages:
- Specifically developed geometry for machining stainless steel, titanium, nickel alloys and special alloys
- Ultra M coating with cutting edge preparation prevents micro-breakouts on the cutting edge, thereby increasing the service life

HPC ALU

Grinding/geometry:
- For HPC boring
- Tip angle 130°
- Helix angle 15°
- 2 margins
- 4-facet point
- Dia. tolerance m7

Advantages:
- Specially developed geometry for machining non-ferrous metals such as aluminium, brass, bronze and plastics.
- Perfect chip breaking due to the sharp, specially prepared cutting edges
- The specially designed ULTRA N PRO coating prevents built-up edges
- Very good chip removal even in the case of long-chipping material due to the large and polished flutes
- Excellent borehole quality due to low friction coefficient



Typ U4

Grinding/geometry:
- Tip angle 118°
- Helix angle 38°
- Precision 4-face grinding
- Optimised cross-hatch-like point thinning
- Straight main cutting edge

Cutting material:
- HSSE: HSS steel with 5 % cobalt alloy featuring outstanding hot hardness to cater for increased loads

Advantages:
- Wide range of applications due to the universal geometry design
- High level of process reliability through precision grinding
- Extremely good centring properties thanks to the 4-face grinding with cross-hatch-like point thinning (no centring required)
- Low process forces (feed force and torque) due to optimised flute profile
- Very precise, dimensionally accurate drilling in terms of diameter and roundness due to the smooth-cutting geometry design

Typ N

Grinding/geometry:
- Tip angle 118°
- Helix angle 30°
- Conical chisel point

Cutting material:
- Universal HSS steel cutting material, for alloyed and unalloyed steels up to 1,000 N/mm², cast steel, cast iron and iron alloys

Advantages:
- Wide range of applications due to the universal geometry design
- Minimises tool costs
- Flexible use on both conventional and CNC machines, even in unstable conditions
- Low hardness, resulting in high breaking strength

Typ NV

Grinding/geometry:
- Helix angle 20°
- Split point 135°
- Point thinning ≥ 1.0 mm

Cutting material:
- HSSE Co 8 %-alloyed steel for increased hot hardness

Advantages:
- Robust drill bit geometry for higher-alloy, higher-strength materials from 700 N/mm²
- Reinforced core
- For use on conventional and CNC machines

Typ VA

Grinding/geometry:
- Conical chisel point 130°
- Helix angle 35°
- Point thinning shape C
- Increased core diameter

Cutting material:
- HSSE: HSS steel with 5 % cobalt alloy with increased hot hardness for increased loads up to 1,300 N/mm²

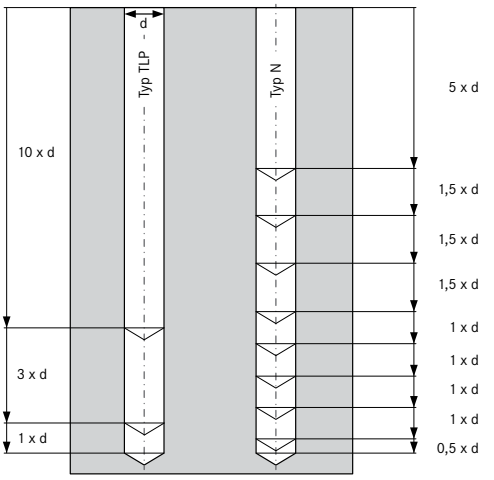
Advantages:
- Positive geometry specially developed for use in stainless steel and special alloys
- Special geometry with aggressive cutting edge design and free geometry for very smooth cutting

Typ TLP

Grinding/geometry:
- Conical chisel point 130°
- Helix angle 38°
- Point thinning shape A

Cutting material:
- Universal HSS steel cutting material, for alloyed and unalloyed steels up to 1,000 N/mm², cast steel, cast iron and iron alloys
- HSSE: HSS steel with 5 % cobalt alloy with increased hot hardness for increased loads up to 1,300 N/mm²

Advantages:
- Optimised flute profile for deep-hole drilling in unfavourable conditions such as insufficient cooling and poor chip removal
- Deep holes of up to 25xD can be achieved
- Special geometry for drilling long-chipping materials
- Deep-hole profile for optimised chip removal at greater drilling depths without venting
- Large chip space volume for excellent chip removal



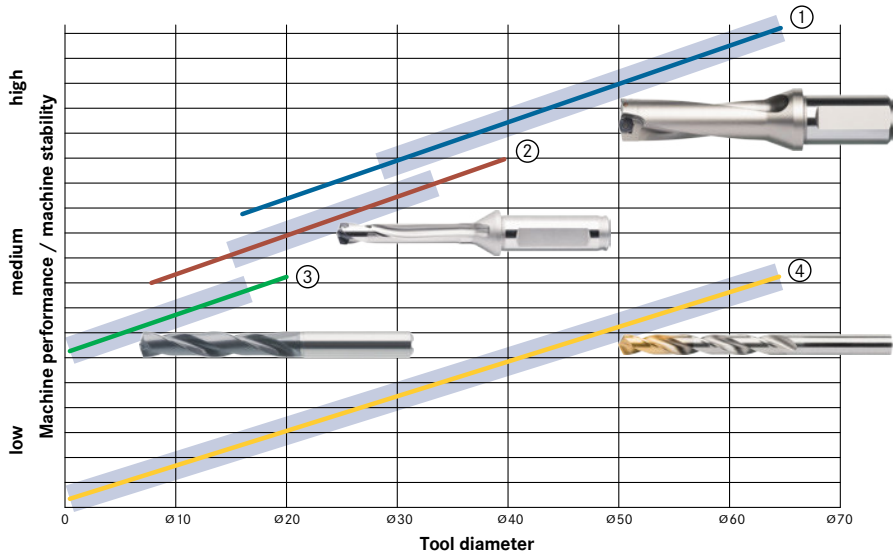
Typ X

Grinding/geometry:
- Tip angle 130°
- Precision-ground conical chisel point + point thinning combination shape A/shape B
- Chip angle correction using shape B point thinning element, therefore “strong, stable” cutting edge
- Straight main cutting edge

Cutting material:
- HSSE-PM steel maximum wear resistance due to powder metallurgical steel
- Very dense, homogeneous microstructure
- Higher level of hardness and heat resistance
- High level of wear resistance and cutting edge stability

Advantages:
- Maximum wear resistance and heat resistance due to HSSE-PM cutting material and TiN coating
- Economical drill bit that closes the gap between standard HSS drill bits and solid carbide drill bits for medium-strength materials and medium batch sizes
- High cutting edge stability and robust drill bit design thanks to the conical chisel point with combined shape A/B point thinning and optimised parabolic flute profile
- High process reliability due to the homogeneous microstructure of the HSSE-PM steel

economical range of different drill technologies



① indexable insert drill
② indexable insert drill
③ SC HPC drill
④ HSS/HSSE drill

= efficiency range depending on the diameter

142° NC spotting drill

Application:
For NC spot drilling 142° on CNC machines.
Ensures optimum centring for HPC drill bits with 135° or 140° tip angle.

Advantage:
- Exact positioning of the bore possible
- The follow-up tool does not run off centre
- Centring for HPC drill bit from 8xD recommended

	Ø	Cutting material	Surface	Angle of the tip	P 1300N/mm²	M	N	K	S	H 55HRC		page

TiAlN Plus solid carbide high-performance drill bit range
For universal use up to 1,300 N/mm²

Application:
For HPC bore machining up to a strength of 1,300 N/mm²

Advantage:
- Economic drilling in a wide variety of materials with high cutting values
- Newly developed geometry in conjunction with a multi-layer coating individually tailored to drilling provides significantly longer service lives
- Cutting edge finishing reduces micro-breakouts and increases the service life
- Very wide and in-depth range from 1.00 mm to 20.00 mm diameter in 3xD-12xD
- Core hole dimensions available for thread tapping and thread forming
- 3xD + 5xD with and without internal coolant supply

TiAlN plus

High-performance drill bit solid carbide TiNAlOX drill bit
For universal use up to 1,300 N/mm²

Application:
For HPC bore machining up to 1,300 N/mm².

Advantage:
- Latest coating technology: unique, extremely hard, low-friction, temperature-resistant and extremely thin TiNAlOX coating provides added service life and process stability.
- Cutting edge preparation minimises micro-breakouts on the cutting edge

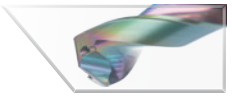
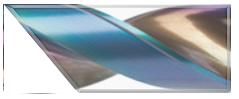
SC ULTRA N PRO high-performance drill bit range

Application:
For HPC drilling in non-ferrous metals material groups

Advantage:
- Perfect chip breaking due to the sharp, specially prepared cutting edges
- The specially designed ULTRA N PRO coating prevents built-up edges
- Very good chip removal even in the case of long-chipping material due to the large and polished chip grooves
- Excellent borehole quality due to low friction coefficient





ULTRA N PRO

High-feed drill bit solid carbide TiAlNPlus high-feed range

Application:
Designed for use with very high feed rates on stable and high-performance machines

Advantage:
- Up to 50 % higher productivity compared to dual-edge drill bits
- Perfect bore concentricity combined with excellent self-centring behaviour, even on uneven surfaces
- Extremely high feed rates thanks to the special rake
- Polished chip spaces and optimised core tapering ensure perfect chip removal
- Minimum burr formation at hole exit thanks to the 135° tip angle

High-performance deep-hole drill bit range - 16-30XD

Application:
For HPC deep-hole bore machining up to a strength of 1,300 N/mm².

Advantage:
- The entire range is coordinated in terms of angle and diameter
- Very good all-round properties and precise cutting performance with high cutting rates
- Very good chip removal and chip control thanks to polished chip space
- State-of-the-art coating technology provides a long service life in series production
- High drilling accuracy thanks to newly developed drill heels
- Cutting edge preparation minimises micro-breakouts on the cutting edge
- Available in 40xD and 50xD upon request

SC TiAINPlus drill mill range

Application:
For drilling out high-strength material connections on bodywork

Advantage:
- Low-vibration running due to four cutting edges with unequal pitch
- High stability due to corner protection chamfer
- Very good spot drilling behaviour due to centring tip with two cutting edges above centre
- No spinning in the drill chuck due to the 3-flat shank

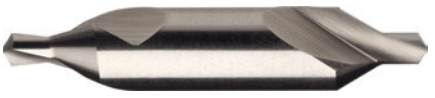
ATORN Solid carbide centre drill, form A (DIN 333)

for universal use up to 1300 N/mm²



Application:
For centre drilling on CNC machines.

Execution:
- spiral-fluted design with relief grinding

Advantage:
- radial relief ensures optimum chip breaking
- Solid carbide cutting material ensures a broad application range and an extremely long service life in series production

Notes:
For making centring holes in accordance with DIN 332

ATORN NC spotting drill VHM 90°/120°/142°

For universal use up to 1300 N/mm²

Application:
No. 11009–11069: For 90° spot drilling and simultaneous countersinking for smaller bore diameters on CNC machines.
No. 11082–11089: For 120° spot drilling for the following twist drills on CNC machines.
No. 11096–11113: For 142° spot drilling for the following twist drills on CNC machines.

Execution:
- Spiral-fluted design

Advantage:
- Short design with precise point geometry and chisel edge ensure form-true and process-reliable spot drilling
- The follow-on tool does not run off centre
- Precise gauge thanks to special point thinning of the chisel edge
- **No. 11069 020–11069 200, 11089 020–11089 200, 11113 020–11113 200:** Maximal service life thanks to innovative coating

Notes:

For universal use up to 1,300 N/mm²

Application:
For HPC bore machining up to a strength of 1,300 N/mm²

Advantage:
- Economic drilling in a wide variety of materials with high cutting values
- Newly developed geometry in conjunction with a multi-layer coating individually tailored to drilling provides significantly longer service lives
- Cutting edge finishing reduces micro-breakouts and increases the service life
- Very wide and in-depth range from 1.00 mm to 20.00 mm diameter in 3xD-12xD
- Core hole dimensions available for thread tapping and thread forming
- 3xD + 5xD with and without internal coolant supply

TiAlN plus

HPC UNI

ATORN high-performance drill, solid carbide TiAlN plus HPC 3xD with internal cooling (DIN 6537)

for universal use up to 1300 N/mm²

VHM | TiAlN plus | 3xD | HPC UNI | 140° | IK | HA | HB

Application:
for HPC boring up to a strength of 1300 N/mm²

Execution:
- solid carbide TiAlNplus high-performance drill
- 2 drill heels
- Cone polished section
- 30° spiral angle
- Straight main cutting edge

Advantage:
- economic drilling in a wide variety of materials with high cutting values
- newly developed geometry in conjunction with a multi-layer coating individually tailored to drilling ensures significantly longer service lives
- Cutting edge finishing reduces micro-fractures and increases the service life

Prod. Gr. 1AE

ATORN high-performance drill, solid carbide TiAlN plus HPC 3xD without internal cooling (DIN 6537)

for universal use up to 1300 N/mm²

VHM | TiAlN plus | 3xD | HPC UNI | 140° | HA | HB

Ident. No. 010–203, 207, 209, 211

Ident. No. 204–206, 208, 210, 212–400

p. 9 p. 11 | p. 12 | p. 123

Application:
for HPC boring up to a strength of 1300 N/mm²

Execution:
- solid carbide TiAlNplus high-performance drill
- 2 drill heels
- Cone polished section
- 30° spiral angle
- Straight main cutting edge

Advantage:
- economic drilling in a wide variety of materials with high cutting values
- newly developed geometry in conjunction with a multi-layer coating individually tailored to drilling ensures significantly longer service lives
- Cutting edge finishing reduces micro-fractures and increases the service life

Prod. Gr. 1AE

ATORN high-performance drill, solid carbide TiAlN plus HPC 5xD with internal cooling (DIN 6537)

for universal use up to 1300 N/mm²

VHM | TiAlN plus | 5xD | HPC UNI | 140° | IK | HA | HB

Application:
for HPC boring up to a strength of 1300 N/mm²

Execution:
- solid carbide TiAlNplus high-performance drill
- 2 drill heels
- Cone polished section
- 30° spiral angle
- Straight main cutting edge

Advantage:
- Economic drilling in a wide variety of materials with high cutting values
- Newly developed geometry in conjunction with a multi-layer coating individually tailored to drilling ensures significantly longer service lives
- Cutting edge finishing reduces micro-fractures and increases the service life

p. 9 p. 11 p. 12 p. 123

ATORN high-performance drill, solid carbide TiAlN plus HPC 8xD with internal cooling

for universal use up to 1300 N/mm²

VHM | TiAlN plus | 8xD | HPC UNI | 135° | IK | HA

Application:
for HPC boring up to a strength of 1300 N/mm²

Execution:
- solid carbide TiAlNplus high-performance drill
- 4 drill heels
- Four grinding faces
- 30° spiral angle
- Straight main cutting edge

Advantage:
- economic drilling in a wide variety of materials with high cutting values
- newly developed geometry in conjunction with a multi-layer coating individually tailored to drilling ensures significantly longer service lives
- Cutting edge finishing reduces micro-fractures and increases the service life
- very high alignment accuracy thanks to 4 drill heels
- high process reliability even at extreme depths

p. 9 p. 11 | p. 12 | p. 123

High-performance drill bit solid carbide TiNAIOX drill bit
For universal use up to 1,300 N/mm²

Application:
For HPC bore machining up to 1,300 N/mm².

Advantage:
- Latest coating technology: unique, extremely hard, low-friction, temperature-resistant and extremely thin TiNAIOX coating provides added service life and process stability.
- Cutting edge preparation minimises micro-breakouts on the cutting edge

TiNAIOX HPC UNI

ORION® high-performance drill bit, solid carbide TiNAIOX HPC 3xD with internal cooling (DIN 6537)

For universal use up to 1300 N/mm²

VHM | TiNAIOX | 3xD | HPC UNI | 140° | IK | HB

Application:
For HPC bore machining up to 1,300 N/mm².

Execution:
- Solid carbide TiNAIOX high-performance drill
- 2 drill heels
- Four grinding faces
- 30° spiral angle
- Straight main cutting edge

Advantage:
- universal application ensures maximum flexibility
- extremely hard, low-friction, temperature-resistant and form-fitting TiNAIOX coating ensures greater service life
- Cutting edge preparation minimises micro-fractures on the cutter

ORION® High-performance drill, solid carbide TiNAlOX HPC 3xD without internal cooling (DIN 6537)

For universal use up to 1300 N/mm²

VHM | TiNAlOX | 3xD | HPC UNI | 140° | HB

Application:
For HPC bore machining up to 1,300 N/mm².

Execution:
- High-performance drill, solid carbide TiNAlOX without internal cooling
- 2 drill heels
- Four grinding faces
- 30° spiral angle
- Straight main cutting edge

Advantage:
- universal application ensures maximum flexibility
- extremely hard, low-friction, temperature-resistant and form-fitting TiNAlOX coating ensures greater service life
- Cutting edge preparation minimises micro-fractures on the cutter

p. 9 p. 11 p. 12 p. 123

ORION® high-performance drill bit, solid carbide TiNAlOX HPC 5xD with internal cooling (DIN 6537)

For universal use up to 1300 N/mm²

VHM | TiNAlOX | 5xD | HPC UNI | 140° | IK | HB

Application:
For HPC bore machining up to 1,300 N/mm².

Execution:
- Solid carbide TiNAlOX high-performance drill
- 2 drill heels
- Four grinding faces
- 30° spiral angle
- Straight main cutting edge

Advantage:
- universal application ensures maximum flexibility
- extremely hard, low-friction, temperature-resistant and form-fitting TiNAlOX coating ensures greater service life
- Cutting edge preparation minimises micro-fractures on the cutter

Prod. Gr. 1AS

TiAlN solid carbide high-performance drill bit range

Application:
For HPC bore machining up to a strength of 1,300 N/mm².

Advantage:
- Universal high-performance tool with excellent value for money
- Wide range from 3xD to 12xD
- 3xD + 5xD with and without internal coolant supply

TiAlN | HPC UNI

ORION® high-performance drill bit, solid carbide TiAlN HPC 3xD with internal cooling (DIN 6537)

for universal use up to 1300 N/mm²

VHM | TiAlN | 3xD | HPC UNI | 140° | IK | HB

Application:
For HPC boring up to a strength of 1300 N/mm².

Execution:
- Solid carbide TiAlN high-performance drill
- 2 drill heels
- Cone polished section

- 30° spiral angle
- Straight main cutting edge

Advantage:
- universal high-performance tool with excellent price/performance ratio
- 3xD + 5xD with and without IC

Prod. Gr. 140

ORION® High-performance drill, solid carbide TiAlN HPC 3xD without internal cooling (DIN 6537)

For universal use up to 1300 N/mm²

VHM | TiAlN | 3xD | HPC UNI | 140° | HB

Application:
For HPC boring up to a strength of 1300 N/mm².

Execution:
- Solid carbide TiAlN high-performance drill
- 2 drill heels
- Cone polished section
- 30° spiral angle
- Straight main cutting edge

Advantage:
- universal high-performance tool with excellent price/performance ratio
- 3xD + 5xD with and without IC

p. 9 p. 11 | p. 12 | p. 123

ORION® high-performance drill bit, solid carbide TiAlN HPC 5xD with internal cooling (DIN 6537)

For universal use up to 1300 N/mm²

VHM | TiAlN | 5xD | HPC UNI | 140° | IK | HA | HB

Application:
For HPC boring up to a strength of 1300 N/mm².

Execution:
- Solid carbide TiAlN high-performance drill
- 2 drill heels
- Cone polished section
- 30° spiral angle
- Straight main cutting edge

Advantage:
- universal high-performance tool with excellent price/performance ratio
- 3xD + 5xD with and without IC

p. 9 p. 11 p. 12 p. 123

ORION® High-performance drill, solid carbide TiAlN HPC 5xD without internal cooling (DIN 6537)

For universal use up to 1300 N/mm²

VHM | TiAlN | 5xD | HPC UNI | 140° | HB

Application:
For HPC boring up to a strength of 1300 N/mm².

Execution:
- High-performance drill, solid carbide TiAlN without internal cooling
- 2 drill heels
- Cone polished section
- 30° spiral angle
- Straight main cutting edge

Advantage:
- universal high-performance tool with excellent price/performance ratio
- 3xD + 5xD with and without IC

p. 9 p. 11 p. 12 p. 123

ORION® high-performance drit bit, solid carbide TiAlN HPC 8xD with internal cooling

For universal use up to 1300 N/mm²

VHM | TiAlN | 8xD | HPC UNI | 140° | IK | HB

Application:
For HPC boring up to a strength of 1300 N/mm².

Execution:
- Solid carbide TiAlN high-performance drill
- 4 drill heels
- Cone polished section
- 30° spiral angle
- Straight main cutting edge

Advantage:
- universal high-performance tool with excellent price/performance ratio
- very high alignment accuracy thanks to 4 drill heels
- high process reliability even at extreme depths

p. 9 p. 11 | p. 12 | p. 123

Prod. Gr. 140

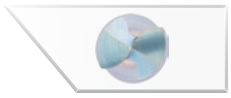
High-performance drill bit solid carbide TiAlSiN hard range

Application:
For HPC borehole machining up to 65 HRC

Advantage:
- High centring accuracy
- Special coating for drilling hardened steels up to 65 HRC
- Extremely hard, low-friction and temperature-resistant TiASiN coating for longer service life
- Reinforced core with special tip and cutting chisel edge



TiAlSiN

HPC HART

ATORN high-performance drill bit, solid carbide TiAlSiN HPC 3xD without internal cooling (DIN 6537)

for hard machining up to 65 HRC

VHM | TiAlSiN | 3xD | HPC HART | 140° | HA

Application:
for HPC boring up to 65 HRC

Execution:
- 2 drill heels
- 30° spiral angle
- Convex main cutting edge

Advantage:
- high centring accuracy
- special coating for drilling hardened steels up to 65 HRC
- extremely hard, low-friction and temperature-resistant TiAlN coating for longer service life
- Reinforced core with special tip and cutting chisel edge
- No internal coolant feed for higher stability

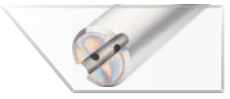
Prod. Gr. 1AB

Ultra M solid carbide high-performance drill bit range

Application:
For HPC bore machining in the stainless steel, titanium, nickel and special alloy material groups.

Advantage:
- Special HPC rake: innovative rake with extremely smooth cutting edge and very long service life
- Latest coating technology: newly developed extremely thin ULTRA M coating for improved service life and process stability
- Cutting edge preparation minimises micro-breakouts on the cutting edge



ULTRA M

HPC VA

ATORN high-performance drill bit, solid carbide ULTRA M HPC 5xD with internal cooling (DIN 6537)

For machining stainless steel and titanium

VHM | ULTRA M | 5xD | HPC VA | 140° | IK | HA | HB

Application:
For HPC boring in stainless steel, titanium alloys, nickel alloys and special alloys.

Execution:
- Solid carbide high-performance drill ULTRA M
- 2 drill heels
- 4 grinding faces
- 30° spiral angle
- Straight main cutting edge

Advantage:
- innovative cutting geometry with extremely effective cutting edge
- newly developed form-fitting ULTRA M coating for improved service life
- Cutting edge preparation minimises micro-fractures on the cutter

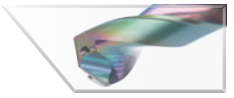
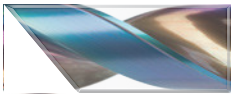
Prod. Gr. 113

SC ULTRA N PRO high-performance drill bit range

Application:
For HPC drilling in non-ferrous metals material groups

Advantage:
- Perfect chip breaking due to the sharp, specially prepared cutting edges
- The specially designed ULTRA N PRO coating prevents built-up edges
- Very good chip removal even in the case of long-chipping material due to the large and polished chip grooves
- Excellent borehole quality due to low friction coefficient





ULTRA N PRO | HPC ALU

ATORN ULTRA N PRO 5xD high-performance solid carbide drill bit with internal cooling

for use in non-ferrous metals

VHM | ULTRA N PRO | 5xD | HPC ALU | 130° | IK | HA

Application:
For HPC drilling in non-ferrous metals

Execution:
- SC ULTRA N PRO high-performance drill bit
- 2 margins
- 4-facet point
- 30° spiral angle
- Straight main cutting edge
- Polished chip grooves
- Specially prepared cutting edges

Advantage:
- Perfect chip breaking due to the sharp, specially prepared cutting edges
- The specially designed ULTRA N PRO coating prevents built-up edges
- Very good chip removal even in the case of long-chipping material due to the large and polished chip grooves
- Excellent drilled hole quality due to low friction coefficient

Prod. Gr. 134

High-feed drill bit solid carbide TiAlNPlus high-feed range

Application:
Designed for use with very high feed rates on stable and high-performance machines

Advantage:
- Up to 50 % higher productivity compared to dual-edge drill bits
- Perfect bore concentricity combined with excellent self-centring behaviour, even on uneven surfaces
- Extremely high feed rates thanks to the special rake
- Polished chip spaces and optimised core tapering ensure perfect chip removal
- Minimum burr formation at hole exit thanks to the 135° tip angle

TiAlN plus

HPC UNI

ATORN High-feed drill VHM-TiAlNplus HPC 5xD with IC (DIN 6537)

For use in steel and casting materials

VHM | TiAlN plus | 5xD | HPC UNI | 135° | IK | HA

Application:
Designed for use with very high feeds on stable and high-performance machines

Execution:
- 3-edge drill
- 4 grinding surfaces with concave main cutting edge
- 3 drill heels
- 30° spiral angle

Advantage:
- Up to 50% higher productivity compared to dual-edge drill bits
- Perfectly round holes combined with excellent self-centring behaviour, even on uneven surfaces
- Extremely high feed rates thanks to the special cutting geometry
- Polished chip spaces and optimised tapered core rejuvenation ensure perfect chip removal
- Minimum burr formation at hole exit thanks to the 135° tip angle

Prod. Gr. 1AB

High-performance deep-hole drill bit range - 16-30XD

Application:
For HPC deep-hole bore machining up to a strength of 1,300 N/mm².

Advantage:
- The entire range is coordinated in terms of angle and diameter
- Very good all-round properties and precise cutting performance with high cutting rates
- Very good chip removal and chip control thanks to polished chip space
- State-of-the-art coating technology provides a long service life in series production
- High drilling accuracy thanks to newly developed drill heels
- Cutting edge preparation minimises micro-breakouts on the cutting edge
- Available in 40xD and 50xD upon request

TiAlN

HPC UNI

ATORN high-performance pilot drill bit, solid carbide TiAlN 5xD with internal cooling (DIN 6537)

for universal use up to 1300 N/mm²

VHM | TiAlN | 5xD | HPC UNI | 140° | IK | HA

Application:
For placing a pilot hole for deep-hole drills from 12xD with HPC geometry up to a strength of 1300 N/mm².

Execution:
- Solid carbide TiAlN high-performance drill
- 2 drill heels
- Cone polished section
- 30° spiral angle
- Straight main cutting edge

Advantage:
- Precision grinding for very accurate holes in terms of fit and shape for demanding requirements around dimensional tolerance
- very precise guidance due to innovative geometry
- High-performance coating provides high cutting parameters and long service life
- the entire range is coordinated in terms of angle and diameter

ATORN high-performance deep hole drill bit, solid carbide TiAlN HPC 16xD with internal cooling

for universal use up to 1300 N/mm²

VHM | TiAlN | 16xD | HPC UNI | 135° | IK | HA

Application:
For HPC deep-hole boring up to a strength of 1300 N/mm².

Execution:
- High-performance deep hole drill, solid carbide TiAlN
- 4 drill heels
- Four grinding faces
- 30° spiral angle
- Straight main cutting edge

Advantage:
- very good all-round properties and precise cutting performance with high cutting rates
- unique, extremely hard, low-friction, temperature-resistant and form-fitting TiAlN coating ensures a longer service life
- Cutting edge preparation minimises micro-fractures on the cutter
- the entire range is coordinated in terms of angle and diameter

Prod. Gr. 113

ATORN high-performance deep hole drill bit, solid carbide TiAlN HPC 25xD with internal cooling

for universal use up to 1300 N/mm²

VHM | TiAlN | 25xD | HPC UNI | 135° | IK | HA

Application:
For HPC deep-hole boring up to a strength of 1300 N/mm².

Execution:
- High-performance deep hole drill, solid carbide TiAlN
- 4 drill heels
- Four grinding faces
- 30° spiral angle
- Straight main cutting edge

Advantage:
- very good all-round properties and precise cutting performance with high cutting rates
- unique, extremely hard, low-friction, temperature-resistant and form-fitting TiAlN coating ensures a longer service life
- Cutting edge preparation minimises micro-fractures on the cutter
- the entire range is coordinated in terms of angle and diameter

Prod. Gr. 113

High-performance micro drill bit solid carbide

Application:
For HPC micro bore machining up to a strength of 1,300 N/mm².

Advantage:
- High-quality solid carbide cutting material and cutting edge preparation minimise micro-breakouts on the cutter
- Smallest diameter from 0.10 mm to 3.00 mm

TiAlN

HPC UNI

ATORN Micro drill CC HPC without IC

for universal use up to 1300 N/mm²

VHM | TiAlN | HPC UNI | 130° | HA

Ident. No. 010–300

Ident. No. 310–600

p. 9 p. 11 | p. 12 | p. 123

Application:
For HPC boring up to a strength of 1300 N/mm².

Execution:
- High-performance drill, solid carbide, with universal precision grinding and 3 H6 straight shank
- **Ident. No. 010–300:** Coated design
- **Ident. No. 310–600:** Bare metal design

Advantage:
- **Ident. No. 010–300:** Extremely hard, low-friction, temperature-resistant, form-fitting coatings
- **Ident. No. 310–600:** Extremely sharp cutters ensure reliable machining even with long chipping non-ferrous metals

Prod. Gr. 113

Solid carbide TiALN high-performance drill, 180°

Applications:
For producing drill holes with 180° bore hole bottom.

Advantages:
- Drilling on slanted surfaces
- Drilling on convex surfaces
- Drilling despite slugs
- Drilling on existing drill hole
- Drilling through cross hole

TiAlN

HPC UNI

ATORN 180° high-performance drill bit, solid carbide TiAlN 3xD with internal cooling (DIN 6537)

For universal use up to 1000 N/mm²

VHM | TiAlN | 3xD | 180° | IK | HA

p. 9 p. 11 | p. 12 | p. 123

Application:
For producing drill holes with a 180° hole base in one operation

Execution:
- Heavy-duty solid carbide drill with 180° precision grinding and drill heels
- Recommended pilot drill bits under art. no. 11181.

Advantage:
- Drilling and sinking in a single work step at high cutting speed
- Innovative geometry ensures good chip removal

Notes:
The maximum permissible inclination of the drilling surface is 45°

inclination up to 15° correction factor = 0.50
inclination up to 30° correction factor = 0.40
inclination up to 45° correction factor = 0.25
For spot drilling, multiply feed f [mm/r] by correction factor Cf
- Spot drill with reduced feed until the tool cuts to 0.25xD over the total ø
- For angled spot drilling: Retract at double feed rate f [mm/r]
- After spot drilling at reduced feed rate (correction factor), drilling continues at feed rate f [mm/r] according to recommended cutting data without correction factors

Prod. Gr. 1AB

Solid carbide TiNALOX high-performance drill bit for tolerance bores

Application:
HPC special geometry for producing tolerance bores in H7 quality.

Advantage:
- High drilling accuracy provided by four drill heels even at high cutting speeds
- Innovative coating technology provides long service life

H7 | TiNALOX | HPC UNI

ORION® high-performance tolerance drill bit, solid carbide TiNALOX HPC 5xD with internal cooling (DIN 6537)

for universal use up to 1300 N/mm²

VHM | TiNALOX | 5xD | HPC | 145° | IK | HA

Application:
HPC special geometry for producing clearance bore holes in H7 quality for universal application up to 1300 N/mm²

Execution:
- High-performance tolerance drill, solid carbide TiNAIOX with special grinding and 4 drill heels

Advantage:
- innovative cutting geometry with 4 drill heels ensure high drilling precision in H7 quality
- 4 drill heels: high drilling precision provided by 4 drill heels even at high cutting speeds
- extremely hard, low-friction, temperature-resistant and form-fitting TiNAIOX coating ensures greater service life
- Cutting edge preparation minimises micro-fractures on the cutter

Notes:
test drilling with cutting-speed adjustment is needed to create an H7 fit tolerance. make sure the tool and workpiece are really well clamped.

Prod. Gr. 113

Solid carbide drill bit with three cutting edges

Application:
For drilling solid bodies, for precisely positioned and shaped bores.

Advantage:
- Special geometry with three cutting edges: innovative rake for precisely positioned and shaped bores in solid bodies without the need for centring
- Universal use: wide range of carbide grades and geometries for highly varied applications; thus increasing service life and providing a high degree of process stability

TiN | Z 3

ATORN Solid carbide high-performance drill 3-flute without IC (DIN 6539)

For universal use up to 1300 N/mm²

VHM | TiN | 5xD | 150° | HA | Z 3

Application:
special geometry with 3 cutting edges for precise position and shape drilling into the main body.

Execution:
- **No. 11164:** SC drill bit, 3-edge, uncoated, **for machining steels up to 1000 N/mm²**
- **No. 11166:** SC drill bit, 3-edge, TiN **for machining steels and non-ferrous metals**
- **No. 11167:** Solid carbide drill bit, 3-edge, 3xD, uncoated, **for machining cast and non-ferrous metals**

Advantage:
- **No. 11164:** Special geometry with three cutting edges: Innovative cutting geometry for precise position and shape drilling into the main body
- **No. 11166–11167:** special geometry with three cutting edges: innovative cutting geometry for precise position and shape drilling into the main body

Prod. Gr. 113

SC TiAINPlus drill mill range

Application:
For drilling out high-strength material connections on bodywork

Advantage:
- Low-vibration running due to four cutting edges with unequal pitch
- High stability due to corner protection chamfer
- Very good spot drilling behaviour due to centring tip with two cutting edges above centre
- No spinning in the drill chuck due to the 3-flat shank

TiAIN plus

ATORN SC TiAINPlus drill mill T=4 3-flat shank

for use in high-strength Usibor® and Ductibor®

VHM | TiAIN plus

No. 11200

No. 11201

Application:
For drilling high-strength connections on bodywork

Execution:
- **No. 11200:** Long version for hand drills and cordless drivers
- **No. 11201:** short version for pneumatic drills such as VARIO DRILL

Advantage:
- Low-vibration due to four cutting edges with unequal pitch
- High stability due to corner protection chamfer
- Very good tapping behaviour due to centring tip with two cutting edges above centre
- No spinning in the drill chuck due to the 3-flat shank

Prod. Gr. 134

TYPE N solid carbide twist drill bit range

Application:
Standard geometry for use up to a strength of 1,300 N/mm².

Advantage:
- Excellent all-round properties and precise cutting behaviour in a wide range of materials
- Universal use: Minimises tool costs and improves flexibility
- High-quality cutting material and cutting edge preparation minimise micro-breakouts on the cutter

Typ N | TiAlN

ATORN Twist drill solid carbide type N without IC (DIN 1897)

For universal use up to 1300 N/mm²

VHM | TiAlN | 118° | Typ N | HA

Application:
Standard geometry for use up to a strength of 1300 N/mm².

Execution:
- Standard solid carbide tool with universal precision grinding

Advantage:
- excellent all-round properties and precise cutting pattern
- universal use: minimises tool costs and improves flexibility
- Cutting edge preparation minimises micro-fractures on the cutter
- **No. 11153:** TiAlN coating for up to 50% longer service life, dry processing possible in steel

No. 11150

No. 11153

ATORN Twist drill solid carbide type N without IC (DIN 338)

for universal use up to 1300 N/mm²

VHM | TiAlN | 118° | Typ N | HA

No. 11155

No. 11157

p. 9 p. 11 p. 12 p. 123

Application:
Standard geometry for use up to a strength of 1300 N/mm².

Execution:
- **No. 11155:** Standard solid carbide tool with universal precision grinding
- **No. 11157:** Standard solid carbide tool with universal precision-ground flutes

Advantage:
- excellent all-round properties and precise cutting pattern
- universal use: minimises tool costs and improves flexibility
- Cutting edge preparation minimises micro-fractures on the cutter
- **No. 11157:** TiAlN coating for up to 50% longer service life, dry processing possible in steel

ATORN Twist drill sets solid carbide type N without IC

In box

VHM | TiN | 3xD | Typ N | HA

Application:
Standard geometry for use up to a strength of 1300 N/mm².

Execution:
- Standard solid carbide tool with universal precision grinding

Advantage:
- excellent all-round properties and precise cutting pattern
- universal use: minimises tool costs and improves flexibility
- Cutting edge preparation minimises micro-fractures on the cutter
- robust metal box protects the tool from damage

No. 11150

ATORN Stepped drill bit, short, type N solid carbide/TiAlN, 90°

for thread core hole with countersink

VHM | TiAlN | Typ N | 140° | HA

Application:
Countersink and thread core holes are manufactured in one machining step. Sturdy short design in particular for using in NC machines and automatic machines.

Execution:
- Heavy-duty stepped drill bit with universal precision grinding

Advantage:
- precise alignment of drill diameter and countersink diameter, lower process costs
- universal use, therefore tool costs are reduced to a minimum and user flexibility is increased

Twist drill bit type U4
For universal use up to 1,300 N/mm²

Application:
Series and single-part production, in particular on CNC machines in the steel, stainless steel, non-ferrous metals, cast iron and special alloy material groups.

Advantage:
- 4-face grinding for drilling without centring
- Universal use, therefore tool costs are minimised and user flexibility is increased
- Innovative and high-quality coating technology provides longer service life

	Ø	Cutting material	DIN	P 700 N/mm²	P 1000 N/mm²	P 1300 N/mm²	M	N	K	S		page

Twist drill bit type N
For universal use up to 1,000 N/mm²

Application:
Series and single-part production on conventional and CNC machines in the steel, non-ferrous metals, cast iron material groups up to a strength of 1000 N/mm²

Advantage:
- Long-term proven rake: excellent all-round properties and precise cutting pattern
- Universal use: Tool costs minimised and greater flexibility for the user

Twist drill bit type NV
For use in high-strength materials from 700 N/mm²

Application:
Series and single-part production on conventional and CNC machines for use in the steel, stainless steel, cast iron and special alloy material groups from a strength of 700 N/mm².

Advantage:
- Special geometry with reinforced core and increased heat resistance
- Use in high-strength material due to high cobalt content in the cutting material

Typ **NV**

Twist drill bit type TLP
For universal use up to 1,300 N/mm²

Application:
Series and single-part production on conventional and CNC machines in the steel, (stainless steel), non-ferrous metals, cast iron and special alloy material groups up to a strength of 1,300 N/mm².

Advantage:
- Deep-hole profile with large chip spaces for optimised chip removal at greater drilling depths without venting
- Large chip space volume for excellent chip removal

Typ TLP

Twist drill bit type VA
For use in stainless steel and special alloys

Application:
Series and single-part production on conventional and CNC machines in the stainless steel, special alloy and (steel) material groups up to a strength of 1,300 N/mm².

Advantage:
- Special geometry with aggressive cutting edge design and free geometry for very smooth cutting
- Long service life due to increased cobalt content

Typ VA

Twist drill bit type X
For universal use up to 1,300 N/mm²

Application:
Series and single-part production on conventional and CNC machines in the steel, stainless steel, non-ferrous metals, cast iron and special alloy material groups up to a strength of 1,300 N/mm².

Advantage:
- Very high wear and heat resistance due to high-quality HSSE-PM cutting material
- High cutting edge stability owing to special point thinning and chip angle adjustment
- Very long service life in higher-alloyed steels and materials

	Ø	Cutting material	DIN	P 700 N/mm²	P 1000 N/mm²	P 1300 N/mm²	M	N	K	S		page

Twist drill bit type UNI/VA HSSE V3
For high-strength and stainless steel machining

Application:
Problem solver on conventional machines without internal cooling in the following material groups: steel, stainless steel and high-strength materials.

Advantage:
- Special geometry combined with cutting material HSSE-V3 makes the drill bit an absolute problem solver
- Very high cutting speeds can be achieved
- Extremely long service life in high-alloyed steels and stainless steels
- For low-performance machines without internal cooling in stainless steel

	Ø	Cutting material	DIN	P 700 N/mm²	P 1000 N/mm²	P 1300 N/mm²	M	N	K	S		page

Micro twist drill bit HSSE-PM
For universal use up to 1,300 N/mm²

Application:
For machining micro holes up to a strength of 1,300 N/mm².

Advantage:
- High-quality HSSE-PM cutting material ensures maximum toughness and is therefore less sensitive to breakage
- Diameter of 0.05 mm-1.50 mm
- Cost-effective alternative to the solid carbide range

	Ø	Cutting material	DIN	P 700 N/mm²	P 1000 N/mm²	P 1300 N/mm²	M	N	K	S		page

Multi-twist drill bit
Straight shank with 3-face grinding

Application:
The multi-twist drill bit was specially developed for mobile use on cordless drill drivers (plates up to 5 mm) and drills.

Advantage:
- 3-face grinding on the shank provides optimum power transmission and retention in drill chuck. Slippage is a thing of the past. Less effort when loosening or tightening in drill chuck.
- 40° helix angle ensures reliable chip removal during universal use. Higher cutting speeds with increased stability and accuracy.
- Special coating in connection with relief grinding provides for maximum adhesion of the lubricant and reliable chip removal.
- In the case of hand-held applications with a cordless drill driver in particular, the 135° tip angle provides for a very high precision of the bore hole, reduced cutting forces (extension of the battery life) and optimum centring precision, thanks to the innovative centre grinding.

	Ø	Cutting material	DIN	P 700 N/mm²	P 1000 N/mm²	P 1300 N/mm²	M	N	K	S		page
11032020-130	2.0-13 mm	HSSE	338	●	●	○	●	●	○	○		100

Step Drill twist drill bit
For universal use up to 1,300 N/mm² in hand-held drills

Application:
The Step Drill has been developed for use in a wide variety of materials, ranging from metals, plastics and acrylic glass to wood.
There are no limits to its use, with typical areas of application including sheet metals, flat materials, metal or plastic profiles, round materials, pipes, steel supports, wood and even plastic panels. It can even be used to drill out rivets.

Advantages:
- Circular holes
- Burr-free hole exit
- No centring required
- No snagging of the drill bit in the material
- Minimal force
- Does not spin in the drill chuck due to 3-flat shank
- Multiple main cutting edges create short chips
- Maximum flexibility

Twist drill bit with soldered carbide cutting edge

Application:
Series and single-part production on conventional and CNC machines.

Advantage:
- Polished chip spaces provide good chip removal
- K20 carbide cutting edge provides long service life
- A problem solver when high elasticity and high wear resistance are required
- Excellent value for money

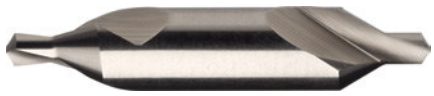
ATORN HSS centre drill, form A (DIN 333)

for universal use up to 1000 N/mm²



Application:
For centre drilling on conventional and CNC machines.

Execution:
- spiral-fluted design with relief grinding. diameter 0.5–0.8, ground on one side

- Packing unit: Ref. no. 005 - 031 = 10 units (price per unit)

Advantage:
- Radial relief ensures optimum chip breaking

Notes:
For making centring holes in accordance with DIN 332

Prod. Gr. 1AD

ATORN HSS centre drill, extra long (DIN 333)

for universal use up to 1000 N/mm²

Application:
For centre drilling on conventional and CNC machines on low-lying or difficult-to-access components.

Execution:
- spiral-fluted design with relief grinding

Advantage:
- Extra length permits precise drilling, even on difficult-to-access components
- Radial relief ensures optimum chip breaking

Notes:
For making centring holes in accordance with DIN 332

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

Prod. Gr. 1AD

ATORN HSS centre drill with protective countersink form B (DIN 333)

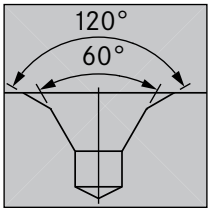
for universal use up to 1000 N/mm²

Application:
For centre drilling on conventional and CNC machines.

Execution:
- Spiral-fluted design with grinding relief
- Packing unit: Ref. no. 016 - 025 = 10 units (price per unit)

Advantage:
- Protective countersink protects the centre drill from damage
- Radial relief ensures optimum chip breaking

Notes:
For making centring holes in accordance with DIN 332



Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

Prod. Gr. 1AD

ATORN HSS centre drill with radius type R (DIN 333)

for universal use up to 1000 N/mm²

Application:
For centre drilling on CNC machines.

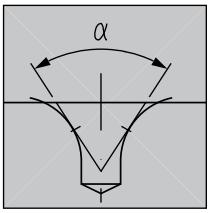
Execution:
- spiral-fluted design with relief grinding. diameter 0.5–0.8, ground on one side

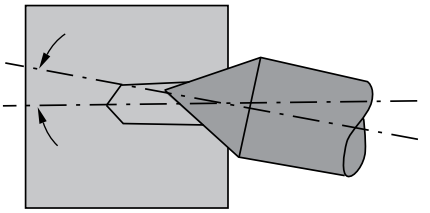
- Packing unit: Ref. no. 005 - 025 = 10 units (price per unit)

Advantage:
- less risk of centre drill breakage, since the radius does not leave behind sharp edges

- radius compensates for positioning inaccuracies and angle errors (sufficient bearing surface present even with offset lathe centre)

Notes:
For making centring holes in accordance with DIN 332





Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN HSSE centre drill with radius form R with surface (DIN 333)

for universal use up to 1300 N/mm²

Application:
For centre drilling on conventional and CNC machines.

Execution:
- spiral-fluted design with relief grinding

Advantage:
- radius compensates for positioning inaccuracies and angle errors (sufficient bearing surface present even with offset lathe centre)
- radial relief ensures optimum chip breaking
- Face ensures good accessibility

Notes:
For making centring holes in accordance with DIN 332

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

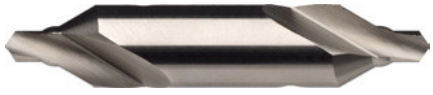
Prod. Gr. 1AD

ATORN HSS centre drill with bulge type W (DIN 333)

for universal use up to 1000 N/mm²



Application:
For centre drilling on conventional and CNC machines.

Execution:
- spiral-fluted design with relief grinding

Advantage:
- Bulge ensures additional room for lubricant
- radial relief ensures optimum chip breaking

Notes:
For making centring holes in accordance with DIN 332

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN ORION® HSSE 90° NC spotting drill

for universal use up to 1300 N/mm²

HSSE | TiN | TiNAlOX | HA | HB

No. 11016

No. 11019 031–11019 601, 11019 621–11019 661

No. 11019 606–11019 620

p. 12 p. 123

Application:
For NC spot drilling on conventional and CNC machines.

Execution:
- spiral-fluted design with relief grinding

Advantage:
- **No. 11016 030–11016 250, 11019 031–11019 251, 11019 606–11019 620:** short design with precise point geometry and chisel edge ensure form-true and reliable spot drilling
- **No. 11016 030–11016 860, 11019 541–11019 661:** 90° NC spotting drill for spot drilling and countersinking in a single action
- **No. 11016 740–11016 860, 11019 541–11019 601, 11019 621–11019 661:**
  - profile-ground, cost-effective NC spotting drill
  - short design with cross-cutter
- **No. 11019 031–11019 251:** 90° NC spotting drill for drilling and countersinking in one step
- **No. 11019 031–11019 601, 11019 621–11019 661:** TiN coating for increased service life requirements
- **No. 11019 606–11019 620:** TiNAlOX coating for increased service life requirements

ATORN HSSE 90° NC spotting drill, uncoated, extra-long

for universal use up to 1300 N/mm²

HSSE | HA

p. 12 p. 123

Application:
For NC spot drilling on conventional and CNC machines on deep-seated or hard to reach components.

Execution:
- Spiral-fluted design with relief grinding.

Advantage:
- short design with precise point geometry and chisel edge ensure form-true and reliable spot drilling
- 90° NC spotting drill for spot drilling and countersinking in a single action
- Extra length enables precision drilling even on components that are difficult to reach

ORION® HSS 90° multifunctional tool

for universal use up to 1300 N/mm²

Application:
For centring, drilling, countersinking, chamfering and peripheral milling.

Execution:
- Spiral-fluted design with grinding relief

Advantage:
- Universal point geometry ensures a broad range of uses
- TiNAlOX coating for increased service life requirements

p. 12 p. 123

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN HSSE 120° NC spotting drill

for universal use up to 1300 N/mm²

No. 11015

No. 11019 030–11019 160

No. 11019 506–11019 516

Application:
For NC spot drilling on conventional and CNC machines.

Execution:
- spiral-fluted design with relief grinding

Advantage:
- short design with precise point geometry and chisel edge ensure form-true and reliable spot drilling
- 120° NC spotting drill ensures precise centring (deflection of drill is minimised)
- **No. 11019 030–11019 160:** TiN coating for increased service life requirements
- **No. 11019 506–11019 516:** TiNAlOX coating for increased service life requirements

Prod. Gr. 1AD

Twist drill bit type U4
For universal use up to 1,300 N/mm²

Application:
Series and single-part production, in particular on CNC machines in the steel, stainless steel, non-ferrous metals, cast iron and special alloy material groups.

Advantage:
- 4-face grinding for drilling without centring
- Universal use, therefore tool costs are minimised and user flexibility is increased
- Innovative and high-quality coating technology provides longer service life

Typ U4

ATORN Twist drill type U4 HSSE (DIN 338)
for universal use up to 1300 N/mm²

HSSE | TiNAIOX | Typ U4 | 118° | HA

Application:
Universal application in all material groups up to a strength of 1300 N/mm2.

Execution:
- **No. 11023:** Twist drill with 4-surface cutting
- **No. 11037:** Twist drill with 4-flute cutting

Advantage:
- universal use: tool costs minimised and greater flexibility for the user
- extremely hard, low-friction, temperature-resistant and form-fitting TiNAIOX coating ensures greater service life
- **No. 11023:** 4-flute cutting for drilling without centring
- **No. 11037:** 4-faced polished section for drilling without centring

Delivery:
Packaging unit: drill Ø 1.0-6.0 mm = 10 pieces (price per piece)

No. 11023

No. 11037

Prod. Gr. 1AG

Twist drill bit type N
For universal use up to 1,000 N/mm²

Application:
Series and single-part production on conventional and CNC machines in the steel, non-ferrous metals, cast iron material groups up to a strength of 1000 N/mm²

Advantage:
- Long-term proven rake: excellent all-round properties and precise cutting pattern
- Universal use: Tool costs minimised and greater flexibility for the user

Typ N

ATORN Twist drill bit type N HSS, vaporised (DIN 338)
For universal use up to 1,000 N/mm²

HSS | Typ N | 118° | HA

Application:
Standard geometry for universal use up to 1000 N/mm².

Execution:
- Twist drill with universal standard geometry

Advantage:
- excellent all-round properties and precise cutting pattern
- universal use: minimises tool costs and improves flexibility
- vaporisation ensures favourable adherence of coolant

Delivery:
box quantity: drill Ø 1.0–6.0 mm = 10 units (price per unit)

Notes:
vaporised drill Ø >2.4 mm

No. 11066

p. 9 p. 11 p. 12 p. 123

Application:
Standard geometry for universal use up to 1000 N/mm².

Execution:
- **No. 11022:** twist drill with universal standard geometry
- **No. 11066:** Twist drill with universal standard geometry

Advantage:
- excellent all-round properties and precise cutting pattern
- universal use: minimises tool costs and improves flexibility
- TiN coating for increased requirements in service life

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

Prod. Gr. 1AA

ORION® Twist drill type N HSS (DIN 338)

for universal use up to 1000 N/mm²

HSS | TiN | Typ N | 118° | HA

No. 11031

No. 11041

p. 9 p. 11 p. 12 p. 123

Application:
Standard geometry for universal use up to 1000 N/mm².

Execution:
- Twist drill with universal standard geometry

Advantage:
- excellent all-round properties and precise cutting pattern
- universal use: minimises tool costs and improves flexibility

- **No. 11031:** TiN coating for increased service life requirements
- **No. 11041:** Vaporisation ensures favourable adherence of coolant

Delivery:
box quantity: drill Ø 1.0–6.0 mm = 10 units (price per unit)

Notes:
No. 11041: steam-treated drill Ø >2.4 mm

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

Prod. Gr. 1AP

ORION® Twist drill type N HSS, roll forged (DIN 338)

for universal use up to 1000 N/mm²

HSS | Typ N | 118° | HA

Application:
for drilling on hand-guided drills and CNC machines.

Execution:
- Twist drill with universal standard geometry, roll forged

Advantage:
- excellent all-round properties and precise cutting pattern
- vaporisation ensures favourable adherence of coolant
- the drill is perfectly suited to machining on hand-operated machines due to its high degree of resilience
- very economical tool

Delivery:
packing unit: drill bits up to Ø10, 20 mm = 10 pieces (price per piece)

p. 9 p. 11 | p. 12 | p. 123

ATORN Twist drill set type N HSS (DIN 338)

In assortment case

HSS | TiN | Typ N | 118° | HA

Application:
Proven standard geometry for universal use in the material groups of steel, non-ferrous metals and cast metal up to a strength of 1000 N/mm².

Execution:
- Twist drill with universal standard geometry

Advantage:
- Long-term proven cutting geometry: excellent all-round properties and precise cutting pattern
- Universal use up to 1000 N/mm²
- Steam treatment ensures a good level of adhesion to the drill and increases the service life

Delivery:
10 units Ø1–6, 5 units Ø6.5–10

ATORN Twist drill set HSS/E (DIN 338)

In box

HSS | Typ N | 118° | HA

Application:
Proven standard geometry for universal use in the material groups of steel, non-ferrous metals and cast metal up to a strength of 1000 N/mm².

Execution:
- **Ident. No. 011–081:** Twist drill with universal standard geometry
- **Ident. No. 111–271:** twist drill with universal standard geometry

Advantage:
- Universal use up to 1000 N/mm²
- **Ident. No. 011–081:**
  - long-term proven cutting geometry: excellent all-round properties and precise cutting behaviour
  - steam treatment ensures good adhesion to the drill and increases the service life
  - Robust and user-friendly plastic box ensures reliable protection and good accessibility
- **Ident. No. 111–271:**
  - Long-term proven cutting geometry: excellent all-round properties and precise cutting behaviour
  - TIN head coating ensures long service lives and profitability
  - the robust and user-friendly metal box guarantees reliable protection and easy access

ORION® Twist drill set HSS/E (DIN 338)

In box

Application:

No. 11043: For drilling on hand-guided drills and CNC machines.

No. 11044–11047: Proven standard geometry for universal use in the material groups of steel, non-ferrous metals and cast metal up to a strength of 1000 N/mm².

Execution:

- **No. 11043:** Twist drill with universal standard geometry, roll forged
- **No. 11044–11047:** Twist drill with universal standard geometry

Advantage:

- **No. 11043:**
  - Long-term proven cutting geometry: excellent all-round properties and precise cutting behaviour
  - Steam treatment ensures excellent adhesion to the drill bit and increases the service life
- **No. 11044:**
  - universal use up to a strength of 1000 N/mm²
  - steam treatment ensures good adhesion to the drill and increases the service life
- **No. 11044–11047:** long-term proven cutting geometry: excellent all-round properties and precise cutting behaviour

ATORN Twist drill type N HSS (DIN 340)

for universal use up to 1000 N/mm²

Application:
Standard geometry for universal use up to 1000 N/mm².

Execution:
- Twist drill with universal standard geometry

Advantage:
- excellent all-round properties and precise cutting pattern
- universal use: minimises tool costs and improves flexibility
- Vaporisation ensures favourable adherence of coolant

Delivery:
Packaging unit: drill Ø 1.0-6.0 mm = 10 pieces (price per piece)

Prod. Gr. 1AA

ORION® Twist drill bit, type N, HSS (DIN 340)

For universal use up to 1,000 N/mm²

HSS | Typ N | 118° | HA

Application:
Standard geometry for universal use up to 1000 N/mm².

Execution:
- Twist drill with universal standard geometry

Advantage:
- excellent all-round properties and precise cutting pattern
- universal use: minimises tool costs and improves flexibility
- Vaporisation ensures favourable adherence of coolant

Delivery:
Packaging unit: drill Ø 1.0-6.0 mm = 10 pieces (price per piece)

p. 9 p. 11 | p. 12 | p. 123

ATORN Twist drill set type N HSS, steam-treated (DIN 1869)

for universal use up to 1000 N/mm²

Application:
Proven standard geometry for universal use up to 1000 N/mm².

Execution:
- Twist drill with universal standard geometry
- Ø 2.0 mm cutting length 100 mm, overall length 160 mm
- Ø 3.0 mm–10.0 mm cutting length 200 mm, overall length 250 mm

Advantage:
- Excellent all-round properties and precise cutting pattern
- Steam treatment increases service life

Twist drill bit type NV
For use in high-strength materials from 700 N/mm²

Application:
Series and single-part production on conventional and CNC machines for use in the steel, stainless steel, cast iron and special alloy material groups from a strength of 700 N/mm².

Advantage:
- Special geometry with reinforced core and increased heat resistance
- Use in high-strength material due to high cobalt content in the cutting material

Typ NV

ATORN Twist drill type NV HSSE (DIN 338)
for use in high-strength materials from 700 N/mm²

HSSE Co8 | Typ NV | 135° | HA

Application:
Geometry with reinforced core and increased thermal resistance for application from strengths upwards of 700 N/mm².

Execution:
- Twist drill with reinforced geometry

Advantage:
- excellent cutting durability owing to reinforced core geometry

Delivery:
Packaging unit: drill Ø 1.0-6.0 mm = 10 pieces (price per piece)

p. 9 p. 11 | p. 12 | p. 123

Twist drill bit type TLP
For universal use up to 1,300 N/mm²

Application:
Series and single-part production on conventional and CNC machines in the steel, (stainless steel), non-ferrous metals, cast iron and special alloy material groups up to a strength of 1,300 N/mm².

Advantage:
- Deep-hole profile with large chip spaces for optimised chip removal at greater drilling depths without venting
- Large chip space volume for excellent chip removal

Typ TLP

ATORN Twist drill type TLP HSS/HSSE (DIN 338)
With deep-hole profile for long-chipping materials

HSS | HSSE | TiAlN | Typ TLP | 130° | HA

No. 11021

No. 11027

No. 11033

p. 9 p. 11 | p. 12 | p. 123

Application:
No. 11021: Geometry with deep-hole profile for application up to a strength of 1000 N/mm².
No. 11027–11033: Geometry with deep-hole profile for application up to a strength of 1300 N/mm².

Execution:
- Twist drill with deep-hole profile

Advantage:
- Deep-hole profile for optimised chip removal at greater drilling depths without venting
- effective removal of chips thanks to large chipping spaces
- **No. 11033:** TiAlN coating for increased service life demands

Delivery:
Packaging unit: drill Ø 1.0-6.0 mm = 10 pieces (price per piece)

Notes:
No. 11021–11027: Chamfer-nitrated >2.36

Prod. Gr. 110

ATORN Twist drill bit set HSSE (DIN 338)

in case

HSSE | TiN | Typ TLP | 118° | 130° | HA

Application:
Special geometry with deep-hole profile for long-chipping materials, for use with the material groups of steel, (stainless steel), non-ferrous metals, cast iron and special alloys up to a strength of 1300 N/mm².

Execution:
- Twist drill with deep-hole profile

Advantage:
- special cutting geometry for long-chipping materials: excellent chip removal due to large chip space. Deep-hole profile to optimise chip removal at greater drilling depths without venting
- TiN coating for increased requirements in service life
- Robust and user-friendly plastic box ensures reliable protection and good accessibility

ATORN Twist drill type TLP HSS/HSSE (DIN 340)

With deep-hole profile for long-chipping materials

HSS | HSSE | TiAlN | TiN | Typ TLP | 130° | HA

No. 11055

No. 11057

No. 11060

p. 9
p. 11
p. 12
p. 123

Application:
No. 11055: Geometry with deep-hole profile for application up to a strength of 1000 N/mm².
No. 11057–11060: Geometry with deep-hole profile for application up to a strength of 1300 N/mm².

Execution:
- Twist drill with deep-hole profile

Advantage:
- Deep-hole profile to optimise chip removal at greater drilling depths without venting

- **No. 11055 030–11055 230, 11060 030–11060 451:** effective removal of chips thanks to large chipping spaces
- **No. 11057:** Effective chip evacuation thanks to large chip rooms
- **No. 11060:** TiAlN coating for increased service life requirements

Delivery:
Packaging unit: drill Ø 1.0-6.0 mm = 10 pieces (price per piece)

Notes:
No. 11057–11060: Chamfer-nitrated >2.36

Prod. Gr. 112

ATORN Twist drill type TLP HSS (DIN 1869)

for universal use up to 1000 N/mm² in long-chipping materials

Application:
Geometry with deep-hole profile for application up to a strength of 1000 N/mm².

Execution:
- Twist drill with deep-hole profile

Advantage:
- Deep-hole profile to optimise chip removal at greater drilling depths without venting
- effective removal of chips thanks to large chipping spaces

Delivery:
Packing unit: drill bit dia. 1.0-6.0 mm = 10 units (price per unit)

p. 9
p. 11
p. 12
p. 123

Prod. Gr. 1AA

Twist drill bit type VA
For use in stainless steel and special alloys

Application:
Series and single-part production on conventional and CNC machines in the stainless steel, special alloy and (steel) material groups up to a strength of 1,300 N/mm².

Advantage:
- Special geometry with aggressive cutting edge design and free geometry for very smooth cutting
- Long service life due to increased cobalt content

Typ VA

ATORN Twist drill bit type VA HSSE (DIN 1897)
for use in stainless steel and special alloys

HSSE | TiAlN plus | Typ VA | 130° | HA

Application:
For use in stainless steel, special alloys up to a strength of 1,300 N/mm².

Execution:
- Twist drill bit with stainless steel geometry

Advantage:
- Special geometry with aggressive cutting edge design for very smooth cutting
- TiAlNplus coating for maximum service life

Delivery:
Packing unit: Drill bit dia. 1.0-6.0 mm = 10 units (price per unit)

p. 9 p. 11 | p. 12 | p. 123

ATORN Twist drill type VA HSSE (DIN 338)

For use in stainless steel and special alloys

No. 11021

No. 11029

p. 9
p. 11
p. 12
p. 123

Application:

No. 11021: For use in stainless steel, special alloys up to a strength of 1,300 N/mm².

No. 11029: For use in stainless steel, special alloys up to a strength of 1300 N/mm².

Execution:

- Twist drill bit with stainless steel geometry

Advantage:

- Special geometry with aggressive cutting edge design for very smooth cutting
- **No. 11021:** TiAlNplus coating for maximum service life

Delivery:

No. 11021: Packing unit: Drill bit dia. 1.0-6.0 mm = 10 each (price per unit)

No. 11029: Packaging unit: drill Ø 1.0-6.0 mm = 10 pieces (price per piece)

ORION® Twist drill bit type VA HSSE (DIN 338)

For use in stainless steel and special alloys

Application:
For use in stainless steel, special alloys up to a strength of 1300 N/mm².

Execution:
- twist drill with stainless steel profile

Advantage:
- Special geometry with aggressive cutter design and free geometry for very smooth cutting

Delivery:
Packaging unit: drill Ø 1.0-6.0 mm = 10 pieces (price per piece)

Prod. Gr. 110

Twist drill bit type X
For universal use up to 1,300 N/mm²

Application:
Series and single-part production on conventional and CNC machines in the steel, stainless steel, non-ferrous metals, cast iron and special alloy material groups up to a strength of 1,300 N/mm².

Advantage:
- Very high wear and heat resistance due to high-quality HSSE-PM cutting material
- High cutting edge stability owing to special point thinning and chip angle adjustment
- Very long service life in higher-alloyed steels and materials

ATORN Twist drill type X HSSE-PM TIN (DIN 338)
for universal use up to 1300 N/mm²

Application:
Universal use in all material groups up to a strength of 1300 N/mm2.

Execution:
- Twist drill with special point thinning

Advantage:
- high wear resistance and increased heat resistance
- high cutting edge stability owing to special point thinning and cutting angle adjustment
- ideal for machining higher-alloyed and higher-strength steels and materials

Delivery:
Packaging unit: drill Ø 1.0-6.0 mm = 10 pieces (price per piece)

Prod. Gr. 1AG

Twist drill bit type UNI/VA HSSE V3
For high-strength and stainless steel machining

Application:
Problem solver on conventional machines without internal cooling in the following material groups: steel, stainless steel and high-strength materials.

Advantage:
- Special geometry combined with cutting material HSSE-V3 makes the drill bit an absolute problem solver
- Very high cutting speeds can be achieved
- Extremely long service life in high-alloyed steels and stainless steels
- For low-performance machines without internal cooling in stainless steel

TiAlN

Typ VA

ATORN Twist drill type UNI/VA HSSE V3 TiAlN
for universal use up to 1300 N/mm²

HSSE V3 | TiAlN | Typ VA | 120° | 130° | HA

Application:
Universal use in all material groups up to a strength of 1300 N/mm²

Execution:
- Twist drill with unified shaft
- Diameter 2.00 mm–4.00 mm = tip angle 130°
- Diameter 4.10 mm–20.0 mm = tip angle 120°
- 2 drill heels
- 38° to 40° spiral angle
- Straight main cutting edge

Advantage:
- Drilling without centring
- Problem solver in low-performance machines without internal cooling in high-strength steels and stainless steels
- Extremely hard, low-friction and temperature-resistant TiAlN coating for longer life
- Very high feed rates can be achieved

p. 9 p. 11 | p. 12 | p. 123

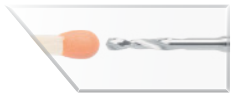
Prod. Gr. 112

Micro twist drill bit HSSE-PM
For universal use up to 1,300 N/mm²

Application:
For machining micro holes up to a strength of 1,300 N/mm².

Advantage:
- High-quality HSSE-PM cutting material ensures maximum toughness and is therefore less sensitive to breakage
- Diameter of 0.05 mm-1.50 mm
- Cost-effective alternative to the solid carbide range



Typ N

ATORN HSSE-PM micro drill (DIN 1899)
for universal use up to 1300 N/mm²

HSSE-PM | Typ N | 118° | HA

Application:
Standard geometry for universal use up to a strength of 1300 N/mm².

Execution:
- profile-ground
- Ø=0.05-0.8 mm shaft diameter = 1.0 mm
- Ø=0.85–1.50 mm shaft diameter = 1.5 mm

Advantage:
- excellent all-round properties and precise cutting pattern
- HSSE-PM cutting material ensures a long service life with a high degree of resilience at the same time

Delivery:
Packaging unit = 10 pieces (price per piece)

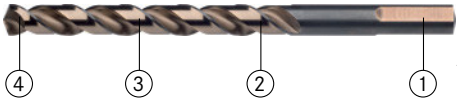
Multi-twist drill bit
Straight shank with 3-face grinding

Application:
The multi-twist drill bit was specially developed for mobile use on cordless drill drivers (plates up to 5 mm) and drills.

Advantage:
- 3-face grinding on the shank provides optimum power transmission and retention in drill chuck. Slippage is a thing of the past. Less effort when loosening or tightening in drill chuck.
- 40° helix angle ensures reliable chip removal during universal use. Higher cutting speeds with increased stability and accuracy.
- Special coating in connection with relief grinding provides for maximum adhesion of the lubricant and reliable chip removal.
- In the case of hand-held applications with a cordless drill driver in particular, the 135° tip angle provides for a very high precision of the bore hole, reduced cutting forces (extension of the battery life) and optimum centring precision, thanks to the innovative centre grinding.



ATORN Multi-twist drills (DIN 338)
for universal use up to 1,300 N/mm² on portable drills

HSSE | UNI | 135°

Application:
Multi-spiral drill for portable use on cordless drill screwdrivers and drilling machines engineered up to a plate thickness of 5 mm.

Execution:
- Twist drill with special geometry for mobile use

Advantage:
- Three-faced polished section on the shank ensures optimum force transmission and fastening in drill chuck (no slipping through)
- 135° tip angle ensures very high degree of precision of the bore hole, in particular with hand-held applications in the cordless drill screwdriver thanks to the innovative centre cutting, reduced cutting forces (longer battery life) and optimum centring precision
- Special coating in conjunction with relief grinding ensures maximum adhesion of the lubricant and reliable chip removal

Delivery:
Packaging unit: drill Ø 1.0-6.0 mm = 10 pieces (price per piece)

Notes:
drill Ø <4.00 mm without three-faced polished section

Step Drill twist drill bit

For universal use up to 1,300 N/mm² in hand-held drills

Application:
The Step Drill has been developed for use in a wide variety of materials, ranging from metals, plastics and acrylic glass to wood.
There are no limits to its use, with typical areas of application including sheet metals, flat materials, metal or plastic profiles, round materials, pipes, steel supports, wood and even plastic panels. It can even be used to drill out rivets.

Advantages:
- Circular holes
- Burr-free hole exit
- No centring required
- No snagging of the drill bit in the material
- Minimal force
- Does not spin in the drill chuck due to 3-flat shank
- Multiple main cutting edges create short chips
- Maximum flexibility

Typ STEP

ATORN Step Drill twist drill bit (DIN 338)

for universal use up to 1,300 N/mm² in hand-held drills

HSSE | Typ STEP | 118° | HA

Application:
for use in hand-held drills, designed for use in a large number of applications and for machining a wide range of materials

Execution:
- Brand new tip design with stepped geometry and up to six steps
- HSSE variant with 5 % cobalt
- Tempered with purple finish

Advantage:
- Very little force needs to be applied
- Circular and burr-free bore holes
- Outstanding centring and drilling
- 3-flat shank ensures perfect power transmission

Delivery:
Packing unit: Drill bit dia. 1.0-6.0 mm = 10 units (price per unit)

Notes:
Dia. 1-2 mm: without 3-flat shank, no steps; dia. 2.5-3.5 mm: without 3-flat shank, with steps; from dia. 4.0 mm: with 3-flat shank, with steps

Advantage:
- Very little force needs to be applied
- Circular and burr-free bore holes
- Outstanding centring and drilling
- 3-flat shank ensures perfect power transmission

Notes:
Dia. 1-2 mm: without 3-flat shank, no steps; dia. 2.5-3.5 mm: without 3-flat shank, with steps; from dia. 4.0 mm: with 3-flat shank, with steps

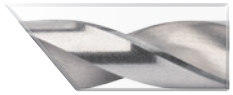
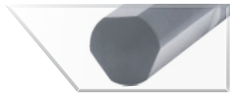
Step Drill twist drill bit
For universal use up to 1,000 N/mm² in hand-held drills

Application:
The Step Drill has been developed for use in a wide variety of materials, ranging from metals, plastics and acrylic glass to wood.
There are no limits to its use, with typical areas of application including sheet metals, flat materials, metal or plastic profiles, round materials, pipes, steel supports, wood and even plastic panels. It can even be used to drill out rivets.

Advantages:
- Circular holes
- Burr-free hole exit
- No centring required
- The drill bit does not cut in the material
- Minimal force
- Does not spin in the drill chuck due to 3-flat shank
- Multiple main cutting edges create short chips
- Maximum flexibility





ATORN Step Drill twist drill bit (DIN 338)
for universal use up to 1000 N/mm² in hand-held drills

No. 11046

No. 11048

p. 9
p. 11
p. 12
p. 123

Application:
for use in hand-held drills, designed for use in a large number of applications and for machining a wide range of materials

Execution:
- Brand new tip design with stepped geometry and up to six steps
- HSS variant
- **No. 11046:** Vaporised
- **No. 11048:** TiN coating on head

Advantage:
- Very little force needs to be applied
- Circular and burr-free bore holes
- Outstanding centring and drilling
- 3-flat shank ensures perfect power transmission

Delivery:
Packing unit: Drill bit dia. 1.0-6.0 mm = 10 units (price per unit)

Notes:
Dia. 1-2 mm: without 3-flat shank, no steps; dia. 2.5-3.5 mm: without 3-flat shank, with steps; from dia. 4.0 mm: with 3-flat shank, with steps

ATORN Step drill bit type N HSS with offset shank

HSS | Typ STEP | 118°

Application:
Standard geometry for universal use up to 1,000 N/mm².

Execution:
- Twist drill bit with universal standard geometry

Advantage:
- Excellent all-round properties and precise cutting behaviour
- Steam treatment ensures favourable adherence of cutting fluid
- Diameter-independent straight shank of uniform length for clamping and tooling advantages

Technical data:
- Shank diameter: 12.7 mm

ATORN ORION® Twist drill type N HSS with offset shank

for universal use up to 1000 N/mm²

HSS | Typ N | 118°

Application:
Standard geometry for universal use up to 1000 N/mm².

Execution:
- Twist drill with universal standard geometry

Advantage:
- excellent all-round properties and precise cutting pattern
- Steam treatment ensures favourable adherence of coolant
- Diameter-independent straight shank of uniform length for clamping and tool advantages
- **No. 11068:** Inexpensive tool, very good value for money

Twist drill bit with soldered carbide cutting edge

Application:
Series and single-part production on conventional and CNC machines.

Advantage:
- Polished chip spaces provide good chip removal
- K20 carbide cutting edge provides long service life
- A problem solver when high elasticity and high wear resistance are required
- Excellent value for money

HM | Typ N

ORION® Twist drill type N with CC cutting plate (DIN 8037)

for universal use up to 1500 N/mm²

HM | 4xD | Typ N | 118°

Application:
Universal use in all material groups up to a strength of 1500 N/mm².

Execution:
- Twist drill with universal standard geometry, soldered cemented carbide insert (K20) and driving lug on the clamp shank

Advantage:
- Cemented carbide insert, K20, for a long service life
- polished chipping spaces ensure good chip removal
- cost-effective tool for broad range of applications

ORION® Twist drill set type N CC cutting plate (DIN 8037)

For universal use up to 1500 N/mm² and for machining hard materials up to 63HRC

HM | 4xD | Typ H | Typ N | 118°

Application:

No. 11160: Universal use in all material groups up to a strength of 1500 N/mm2.

No. 11162: Hard machining up to 63 HRC.

Execution:

- Twist drill with universal standard geometry, soldered cemented carbide insert (K20) and driving lug on the clamp shank

Advantage:

- Cemented carbide insert, K20, for a long service life
- Polished chip chamber for good chip removal
- Rugged steel case protects the tool from damage while allowing user-friendly access
- **No. 11160:** low-cost tool for broad range of applications
- **No. 11162:** long service life in hardened steel

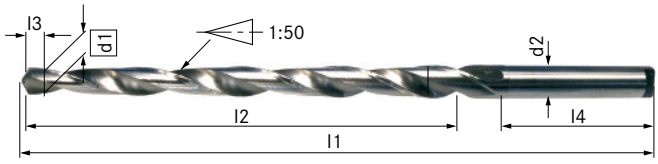
ORION® Taper pin drill HSS 1 : 50 (DIN 1898)

for universal use up to 1000 N/mm²

HSS | 118°



Application:

For taper pin holes, taper 1 : 50. For manufacturing tapered bores for taper pins in line with DIN 1 and DIN EN 22339 in one step. Driver in line with DIN 1809.

Execution:

- profile-ground

Advantage:

- Special, high-precision geometry for outstanding centring and positional accuracy

ATORN HSS core drill (DIN 344)

For universal use up to 1000 N/mm²

HSS | Z 3

Application:
For core drilling pre-drilled, pre-cast or punched holes.

Execution:
- 3-blade design

Advantage:
- stable grinding combined with the three blades ensure that any mis-alignments and run-out of the pre-made holes are corrected

p. 9 p. 11 | p. 12 | p. 123

ATORN ORION® Twist drill type N HSS (DIN 345)

for universal use up to 1000 N/mm²

HSS | Typ N | 118° | MK

No. 11070

No. 11071

Application:
Standard geometry for universal use up to 1000 N/mm².

Execution:
- Twist drill with universal standard geometry

Advantage:
- excellent all-round properties and precise cutting pattern
- universal use: minimises tool costs and improves flexibility
- Steam treatment ensures favourable adherence of coolant

p. 9 p. 11 | p. 123

ATORN Twist drill type VA HSSE, uncoated (DIN 345)

For use in stainless steel and special alloys

HSSE | Typ VA | 130° | MK

Application:
For use in stainless steel, special alloys up to a strength of 1300 N/mm².

Advantage:
- Special geometry with aggressive cutter design and free geometry for very smooth cutting

p. 9 p. 11 p. 123

Execution:
- twist drill with stainless steel profile

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plastics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN Twist drill type N HSS, steam-treated, long (DIN 341)

for universal use up to 1000 N/mm²

Application:
Standard geometry for universal use up to 1000 N/mm².

Execution:
- Twist drill with universal standard geometry

Advantage:
- excellent all-round properties and precise cutting pattern
- universal use: minimises tool costs and improves flexibility
- Steam treatment ensures favourable adherence of coolant

ATORN Twist drill type TLP HSS, uncoated, long (DIN 341)

For universal use up to 1300 N/mm² in long-chipping materials

Application:
Geometry with deep-hole profile for application up to a strength of 1000 N/mm².

Execution:
- Twist drill with deep-hole profile

Advantage:
- Deep-hole profile for optimised chip removal at greater drilling depths without venting
- effective removal of chips thanks to large chipping spaces

Notes:
chamfer nitrated < Ø16; steam treated > Ø16

Prod. Gr. 112

ORION® Twist drill type N with cutting plate (DIN 8041)

for universal use up to 1500 N/mm²

Application:

Universal use in all material groups up to a strength of 1500 N/mm².

Execution:

- Twist drill with universal standard geometry and soldered cemented carbide insert (K20)

Advantage:

- Cemented carbide K20 insert ensures long service life
- polished chipping spaces ensure good chip removal
- cost-effective tool for broad range of applications

p. 9 p. 11 p. 123

Prod. Gr. 140

Stepped drill bit for thread cutting (core hole and countersink)

Application:
Series and single-part production on conventional and CNC machines.

Advantage:
- High profitability as core hole and 90°counterbore are produced in one single work step
- Precise alignment of drill diameter and countersink diameter

ATORN Stepped drill bit, short, type N HSSE

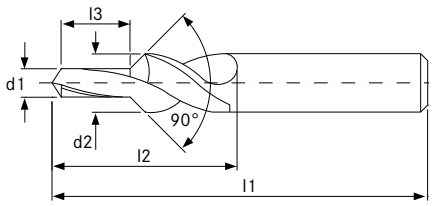
For thread core hole with countersink

HSSE | Typ N | 118° | HA

Application:
Countersink and thread core holes are manufactured in one machining step. Sturdy short design in particular for using in NC machines and automatic machines.

Execution:
- profile-ground

Advantage:
- precise alignment of drill diameter and countersink diameter, lower process costs
- Special geometry for outstanding centring and positional accuracy



p. 9

Prod. Gr. 112

ATORN HSS stepped drill bit short type N

For core hole centrings

HSS | Typ N | 118° | HA | HB

Application:
Drilling of thread core holes in accordance with DIN 332-2, form D/DR. Simultaneous, precisely aligned insertion of centre hole, inlet for screw tap and thread core hole.

Execution:
- profile-ground

Advantage:
- precise alignment of drill diameter and countersink diameter, lower process costs
- universal use, therefore tool costs are reduced to a minimum and user flexibility is increased

Stepped drill bit for 90° countersunk screw heads

Application:
Series and single-part production on conventional and CNC machines.

Advantage:
- High profitability as drill hole and 90° counterbore are produced in one single work step.
- Precise alignment of drill diameter and countersink diameter

ATORN HSSE stepped drill bit short type N, fine quality grade

For 90° countersunk screws

Application:
For through holes in accordance with DIN/ISO 273 and countersinking in accordance with DIN 74 for countersunk screws in accordance with ISO 2009-2010 and DIN 963-964. Sturdy short design in particular for using in NC machines and automatic machines.

Execution:
- profile-ground

Advantage:
- precise alignment of drill diameter and countersink diameter, lower process costs
- Special geometry for outstanding centring and positional accuracy

ORION® HSS Subland stepped drill bit type N, fine quality grade (DIN 8374)

For 90° countersunk screws

Application:
For through holes in accordance with DIN EN 20273 and screw head countersinking 90°.

Execution:
- Drill and countersink step with independent chip grooves and drill heels; regrinding does not affect the profile

Advantage:
- precise alignment of drill diameter and countersink diameter, lower process costs
- universal use, therefore tool costs are reduced to a minimum and user flexibility is increased

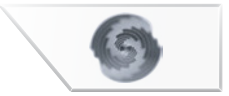
Stepped drill bit with STEP tip

Application:
Ideal for processing sheet metal up to a thickness of 4 mm

Advantage:
- Time savings of up to 75 % when drilling
- Extremely fast and effortless
- Easy and quiet drilling, without jamming in the material
- No spinning in the drill chuck
- Significantly longer service life



TiAlN plus

Typ STEP

ATORN HSS spiral stepped drill bit with STEP tip

for universal use up to 1,000 N/mm²

HSS | TiAlN plus

Application:
Ideal for processing sheet metal up to a thickness of 4 mm

Execution:
- With STEP stepped tip
- Spiral design
- With 3-flat shank

- **Ident. No. 450–480:** TiAlN-coated

Advantage:
- Time savings of up to 75 % when drilling
- Extremely fast and effortless
- Easy and quiet drilling, nojamming in the material
- No spinning in the drill chuck
- Significantly longer service life

ATORN HSS spiral stepped drill bit set with STEP tip

for universal use up to 1,000 N/mm²

HSS | TiAlN plus

Application:
Ideal for processing sheet metal up to a thickness of 4 mm

Execution:
- With STEP stepped tip
- Spiral design
- With 3-flat shank
- **Ident. No. 490:** TiAlN-coated

Advantage:
- Time savings of up to 75 % when drilling
- Extremely fast and effortless
- No spinning in the drill chuck
- Significantly longer service life
- **Ident. No. 440:** Easy and quiet drilling, nojamming in the material
- **Ident. No. 490:** Easy and quiet drilling,nojamming in the material

ATORN ORION® Multi-step drill HSS, straight groove

For universal use up to 1000 N/mm²

HSS | TiN

Application:
For drilling and simultaneous deburring in steel, stainless steel, non-ferrous metals and cast iron.

Execution:
- Profile-ground and straight

Advantage:
- High variability: A wide range of bores can be covered with just one tool
- **Ident. No. 100, 150, 200, 250, 300, 350:** 3-facet shank ensures good torque transfer in the chuck

ATORN Multi-step drill HSS, straight groove with interchangeable bit

For universal use up to 1000 N/mm² in general tool construction

HSS | TiN

Application:
For drilling and simultaneous deburring of holes up to a diameter of 58 mm and a material thickness of up to 4 mm in steel, non-ferrous metals and cast iron. Tool diameters are geared towards meeting the demands of general tool construction.

Execution:
- Stepped drill bit, profile-ground, with straight cutting edge

Advantage:
- High variability: A wide range of bores can be covered with just one tool
- 3-facet shank ensures good torque transfer in the chuck
- User-friendly tool changing: Bit easily replaced in case of wear

Conical drill bits

Application:
Conical drill bits are used to widen pre-drilled, pre-punched or pre-cast holes. They are mainly used for drilling in sheet metal

ORION® Conical drill bit HSS (DIN 344)

for universal use up to 1000 N/mm²

HSS | TiN

Application:
For producing bores in thin sheets made from steel, non-ferrous metals and cast iron. Also suitable for all plastics, for hard paper and plywood, as well as all materials of similar structure and strength

Execution:
- Profile-ground to meet the highest requirements for dimensional accuracy and process reliability

Advantage:
- Innovative cutting geometry: All bores are burr and chatter free
- User-friendly regrinding: Drills can be reground repeatedly
- No deformations even with the thinnest material thicknesses

No. 11400

No. 11401

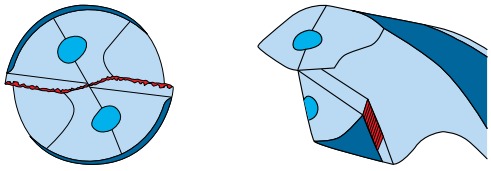
troubleshooting for solid carbide/HSSE drills

flank wear

flank wear is the preferred type of wear, if it is even.

problem
- cutting speed too high
- oil content in coolant too low
- cooling inadequate
- concentricity error

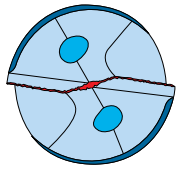
counter-measures
- reduce cutting speed
- increase oil content in coolant
- increase coolant quantity
- check concentricity



flank wear on chisel edge

problem
- cutting speed too low
- feed rate too high
- concentricity error

counter-measure
- reduce cutting speed
- reduce feed rate
- check concentricity



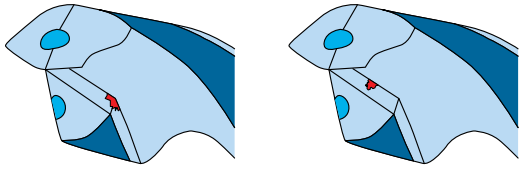
the hole quality decreases, since the self-centring capability is no longer guaranteed.

chipping

chipping occurs mainly when machining pre-drilled holes, when the tip angle of the pilot hole is smaller.

problem
- tip angles do not match each other
- unstable conditions
- concentricity error
- cooling inadequate

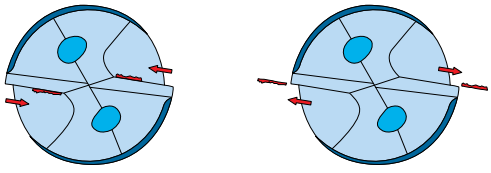
counter-measure
- check tip angles
- check clamping
- check concentricity
- increase cooling



built-up edges

problem
- cutting speed too high/too low
- oil content in coolant too low

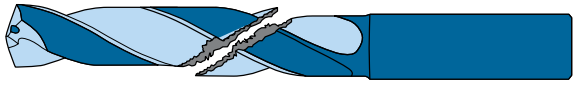
counter-measure
- increase cutting speed so that the build-up edge moves to the middle
- reduce cutting speed so that the built-up edge moves to the exterior or is avoided
- increase oil content in coolant



drill breakage

problem
- cutting speed too low
- unstable conditions
- concentricity error
- feed rate too high
- chips building up

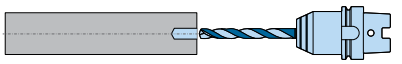
counter-measure
- increase cutting speed
- check clamping
- check concentricity
- reduce feed rate
- increase cooling



process description, deep hole drilling

drilling the pilot bore hole

- in order to get an accurate pitch, we recommend centring with our NC spotting drill no 11169.
- for the pilot hole, we recommend our no. 11181.
- these are 0.02 mm larger in diameter than the corresponding deep-hole drills and have a tip angle of 140°.
- the pilot hole should be at least 3xD in depth, to a maximum of 5xD.



entering the pilot bore hole with the deep hole drill

deep hole drilling up to 30xD

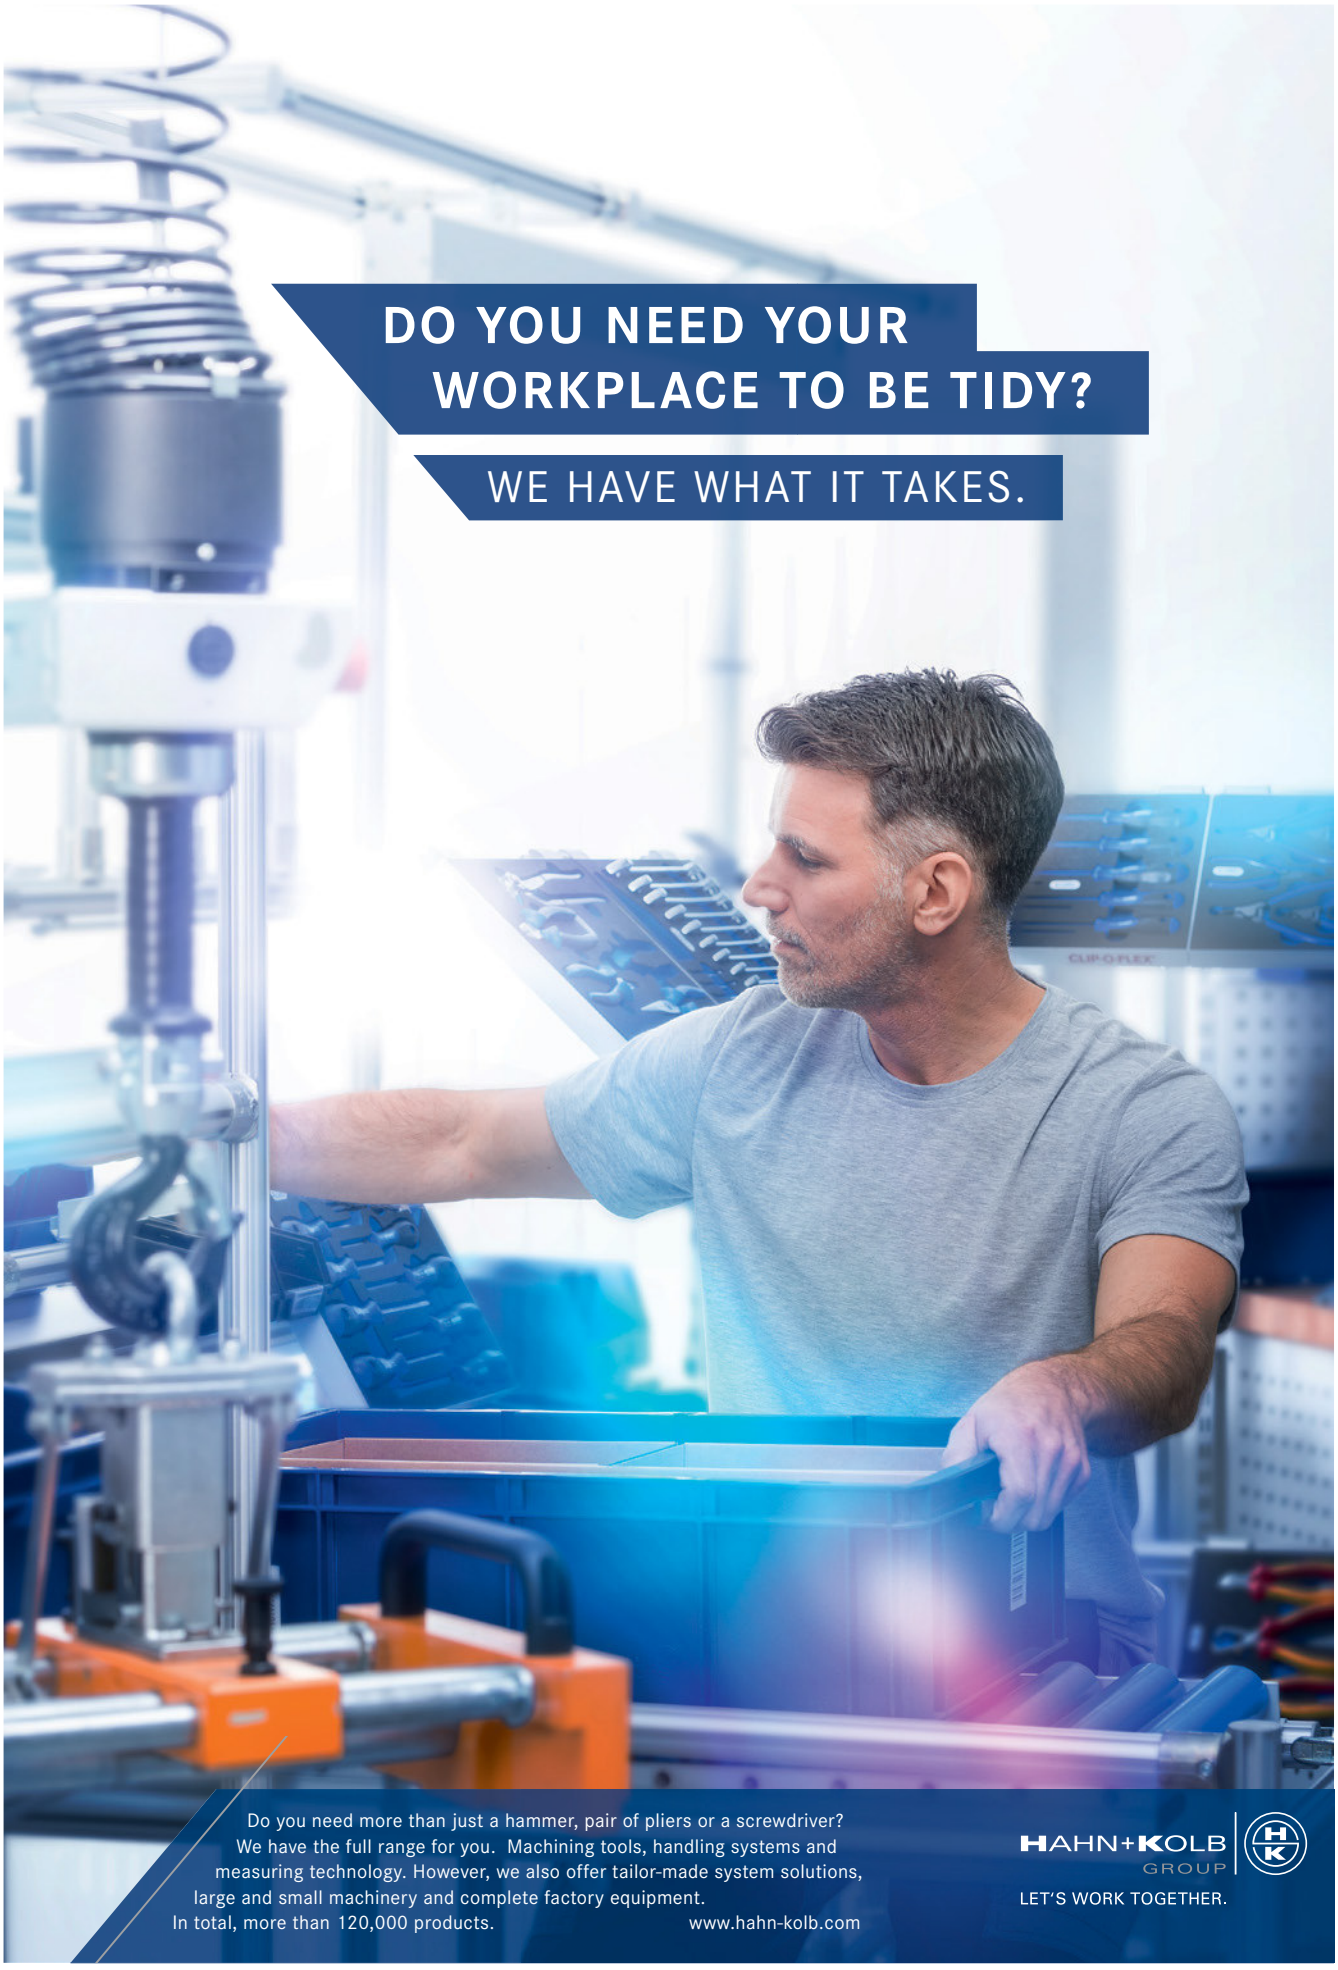
- please enter the pilot hole at low rotation speed (n = 300 rpm) and a low feed rate (Vf = 1000 mm/min), 1-2 mm before reaching the hole base, stop the feed. then increase the rotation speed continuously until reaching the final speed. allow sufficient idling time to ensure that the cooling pump has built up enough pressure.

deep hole drilling

- carry out deep hole drilling with the recommended cutting values, do not remove chips.
- for cross-drilled holes or exiting, reduce the feed by 50 %.

extending the deep hole drill

- retract the deep hole drill by about 1-2 mm from the base of the hole
- reduce the rotation speed to (n = 300 rpm) and travel out of the hole with a low feed rate of (Vf = 1000 mm/min). Cooling must be switched off during this process.



DO YOU NEED YOUR WORKPLACE TO BE TIDY?
WE HAVE WHAT IT TAKES.
Do you need more than just a hammer, pair of pliers or a screwdriver? We have the full range for you. Machining tools, handling systems and measuring technology. However, we also offer tailor-made system solutions, large and small machinery and complete factory equipment. In total, more than 120,000 products.

LET'S WORK TOGETHER.

ORION indexable insert drill bit

Application:

- High-performance drilling in the diameter range from 8.00 mm to 40.00 mm
- At drilling depths 3xD/5xD/7xD
- Replacing the cutting edges in the machine tool is simple. This reduces ancillary and production costs.
- The tool body is supplied with clamping screws
- Universal geometry for steel, cast iron and non-ferrous metals
- Low cutting forces and excellent self-centring capability

Advantage:

- High-quality support material made from high-strength, heat-resistant powder metal, ensures precise alignment and dimensional accuracy of drilling even in difficult cutting conditions
- High-precision h6 shank tolerance
- Polished chip grooves for reliable chip removal even with long-chipping materials
- No need for subsequent grinding
- Indexable insert is easy to replace in the machine tool

	Min./max. cutting edge diameter	Max. drilling depth (D)	Bore type	Coolant supply		page
11213080-400	8-40 mm	3xD	Normal bore, Stud hole bore	Internal		128-129
11215080-400	8-40 mm	5xD	Normal bore, Stud hole bore	Internal		129-130
11217080-400	8-40 mm	7xD	Normal bore, Stud hole bore	Internal		131-132

ATORN indexable insert drill

Application:

- High-performance drills with indexable inserts, drilling depth 3xD-5xD
- For universal use up to 1300 N/mm² in diameter range of 14.00 mm - 44.00 mm
- Best surfaces and bore hole quality
- Four easily selectable cutting material types for machining steel, stainless steel, cast iron as well as superalloys and titanium

Advantage:

- Optimum service life through 4 usable cutting edges per reversible tip
- Trouble-free application for cross-drilled holes, inclined inlet and outlet bores, chain bores, convex entry surface and bores in half cylinder
- Same reversible tip can be used as centre tip and peripheral tip
- Adjustment up to 0.4 mm from the centre, making it possible to cover different diameter ranges

	Min./max. cutting edge diameter	Max. drilling depth (D)	Bore type	Coolant supply		page

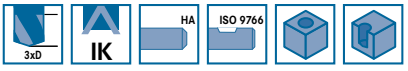
ORION indexable insert drill bit

Application:
- High-performance drilling in the diameter range from 8.00 mm to 40.00 mm
- At drilling depths 3xD/5xD/7xD
- Replacing the cutting edges in the machine tool is simple. This reduces ancillary and production costs.
- The tool body is supplied with clamping screws
- Universal geometry for steel, cast iron and non-ferrous metals
- Low cutting forces and excellent self-centring capability

Advantage:
- High-quality support material made from high-strength, heat-resistant powder metal, ensures precise alignment and dimensional accuracy of drilling even in difficult cutting conditions
- High-precision h6 shank tolerance
- Polished chip grooves for reliable chip removal even with long-chipping materials
- No need for subsequent grinding
- Indexable insert is easy to replace in the machine tool

ORION® Indexable insert drill 3xD

For universal use up to 1,300 N/mm²



p. 140

Application:
high-performance drilling in the diameter range 8.00–40.00 mm and at drilling depths of 3xD for universal use of 1300 N/mm².

Execution:
- Carrier material made of high-quality HSSE-PM in **diameter range = 8–11.5 mm with straight shank HA diameter range = 12–40 mm with straight shank HB**

Advantage:
- high-quality backing material made from high-strength and heat-resistant powder metal, ensures perfectly aligned and dimensionally accurate drilling even under difficult cutting conditions
- polished chipping spaces ensure problem-free, reliable chip removal, even with long-chipping materials
- wide assortment: 3xD, 5xD, 7xD continuous in the diameter range of 8.00–40.00 mm

Notes:
Tightening torque for head and clamping screw with
cutting diameter 8–13.9 mm = 0.6 Nm
cutting diameter 14–17.9 mm = 0.9 Nm
cutting diameter 18–23.9 mm = 1.5 Nm
cutting diameter 24–29.9 mm = 3.5 Nm
cutting diameter 30–40 mm = 4.0 Nm

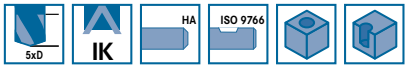
ORION® Indexable insert drill 5xD

For universal use up to 1,300 N/mm²



Application:

high-performance drilling in the diameter range 8.00–40.00 mm and at drilling depths of 5xD for universal use of 1300 N/mm².

Execution:

- Carrier material made of high-quality HSSE-PM in **diameter range = 8–11.5 mm with straight shank HA diameter range = 12–40 mm with straight shank HB**

Advantage:

- High-quality backing material made from high-strength and heat-resistant powder metal ensures perfectly aligned and dimensionally accurate drilling even under difficult cutting conditions
- polished chipping spaces ensure problem-free, reliable chip removal, even with long-chipping materials
- wide assortment: 3xD, 5xD, 7xD continuous in the diameter range of 8.00–40.00 mm

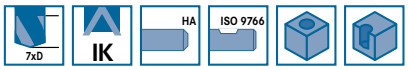
ORION® Indexable insert drill 7xD

For universal use up to 1,300 N/mm²



Application:

high-performance drilling in the diameter range 8.00–40.00 mm and at drilling depths of 7xD for universal use of 1300 N/mm².

Execution:

- Carrier material made of high-quality HSSE-PM in **diameter range = 8–11.5 mm with straight shank HA diameter range = 12–40 mm with straight shank HB**

Advantage:

- high-quality backing material made from high-strength and heat-resistant powder metal, ensures perfectly aligned and dimensionally accurate drilling even under difficult cutting conditions
- polished chipping spaces ensure problem-free, reliable chip removal, even with long-chipping materials
- wide assortment: 3xD, 5xD, 7xD continuous in the diameter range of 8.00–40.00 mm

Prod. Gr. 119

ORION® Solid carbide TiAlN cutting insert for indexable insert drill no. 11213-11217

For universal use up to 1,300 N/mm²

VHM | TiAlN | 130°

Application:
High-performance drilling in conjunction with indexable insert drill no. 11213-11217, for universal application of 1300 N/mm².

Execution:
- Precision-ground indexable insert, tip angle 130°

Prod. Gr. 1AJ

ATORN indexable insert drill

Application:
- High-performance drills with indexable inserts, drilling depth 3xD-5xD
- For universal use up to 1300 N/mm² in diameter range of 14.00 mm - 44.00 mm
- Best surfaces and bore hole quality
- Four easily selectable cutting material types for machining steel, stainless steel, cast iron as well as superalloys and titanium

Advantage:
- Optimum service life through 4 usable cutting edges per reversible tip
- Trouble-free application for cross-drilled holes, inclined inlet and outlet bores, chain bores, convex entry surface and bores in half cylinder
- Same reversible tip can be used as centre tip and peripheral tip
- Adjustment up to 0.4 mm from the centre, making it possible to cover different diameter ranges

ATORN indexable insert drill bit 3xD (DIN 6537)

For universal use up to 1,300 N/mm²

Application:
Broad range of applications in steel, stainless steel, cast iron and special alloys

Execution:
- Available tool lengths of 3xD/4xD/5xD
- Diameter range 14-44 mm

Advantage:
- Optimum service life through 4 usable cutting edges per reversible tip
- Same indexable insert can be used as centre insert and peripheral insert
- Optimal chip removal thanks to optimised coolant outlet
- Best surfaces and bore hole quality

Delivery:
The holder contains the clamping screws, supplied without spanner

Notes:
warning: when the drill passes completely through the workpiece, a disc is created. if the workpiece is rotating, the disc will be flung away! appropriate safety precautions are required!

Prod. Gr. 1AI

ATORN indexable insert drill bit 4xD (DIN 6537)

For universal use up to 1,300 N/mm²

Application:

Broad range of applications in steel, stainless steel, cast iron and special alloys

Execution:

- Available tool lengths of 3xD/4xD/5xD
- Diameter range 14-44 mm

Advantage:

- Optimum service life through 4 usable cutting edges per reversible tip
- Same indexable insert can be used as centre insert and peripheral insert
- Optimal chip removal thanks to optimised coolant outlet
- Best surfaces and bore hole quality

Delivery:

The holder contains the clamping screws, supplied without spanner

Notes:

warning: when the drill passes completely through the workpiece, a disc is created. if the workpiece is rotating, the disc will be flung away! appropriate safety precautions are required!

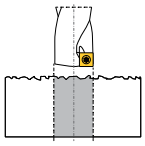
Prod. Gr. 1AZ

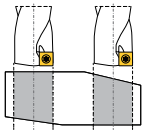
ATORN indexable insert drills - Notes on use

1.



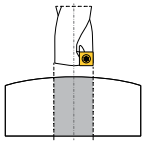
Tapping on uneven surfaces (cast surfaces)
- Reduce feed by approx. 30-50 % during tapping and drilling out
  (Depending on construction stability, clamping and surface quality)

2.



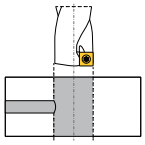
Tapping on inclined surfaces/inclined hole exit
- When tapping, reduce feed by approx. 30-60 % until full diameter is reached
- When drilling out, reduce feed to approx. 30-60 % after the cut interruption
- Use a tough indexable insert type and stable corner radius

3.



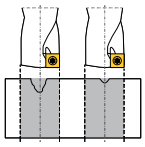
Tapping on spherical surfaces
- When tapping, reduce feed by approx. 30-60 % until full diameter is reached
- When drilling out, reduce feed to approx. 30-60 % after the cut interruption
  (Depending on construction stability and clamping)

4.



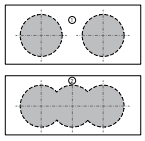
Drilling through a cross hole
- Reduce feed by approx. 30-50 % during tapping and drilling out
  (Depending on construction stability and clamping)
- Reduce feed rate by 50 % in the area of the cross hole
- Pay attention to chip jams at the circumference of the tool
- Use a tough indexable insert type and stable corner radius

5.



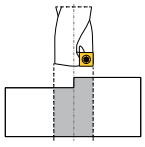
Tapping in a bead or large centring hole
- When tapping and drilling out, reduce the feed by approx. 30-50 % until the centring depth is reached
- Reduce the feed
- Use a tough indexable insert type for the female thread cutter
- If necessary, spotface

6.



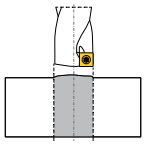
Drilling a bell hollow
- First the no. ① holes, then the no. ② intermediate hole
- Ensure there is a symmetrical distribution
- Avoid chip jams
- Use a tough indexable insert type and corner radius
- Full drilling: Reduce feed by approx. 30-60 % during tapping
  (Depending on construction stability and clamping)
- Cut interruption: When drilling the cut interruption, reduce feed by approx. 50-60 %

7.



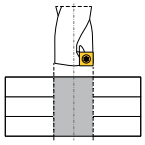
Tapping on an edge
- When tapping and drilling out, reduce the feed by approx. 30-50 % until the full bore diameter is reached
  (Depending on construction stability and clamping)
- Use a tough indexable insert type and stable corner radius

8.



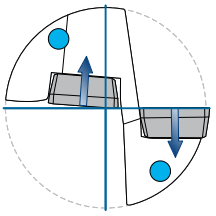
Tapping on uneven surfaces (cast surfaces)
- When tapping, reduce feed by approx. 30-60 % until the full bore diameter is reached
- When drilling out, reduce feed by approx. 30-60 % after the cut interruption
  (Depending on construction stability and clamping)

9.

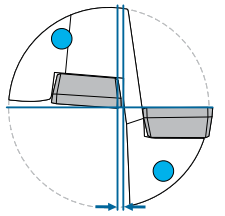


Drilling through packages
- Good workpiece clamping required
- Max. gap = 1 mm

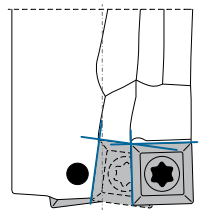
ATORN indexable insert drills - Installation position of plates



Dimensionally accurate holes
Thanks to the special gamma angle, the deflection forces are further minimised and create very precise holes with high process reliability.



Various bore diameters possible thanks to the individual adjustment range
The ATORN indexable insert drill can be positioned up to 0.25 mm from the centre, making it possible to cover different diameter ranges.



Perfect self-centring
The drill centres itself precisely due to the axial positioning and the installation angle of the indexable inserts in relation to each other.

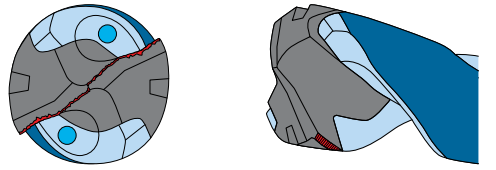
troubleshooting indexable insert drilling

wear to open space

wear to open space is the preferred type of wear, if it is even.

problem
- cutting speed too high
- oil content in coolant too low
- too little cooling
- concentricity error

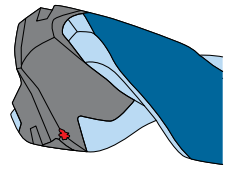
countermeasures
- lower cutting speed
- increase oil content in coolant
- increase coolant quantity
- check concentricity



plastic deformation

problem
- cutting speed too high
- feed rate too high
- too little cooling

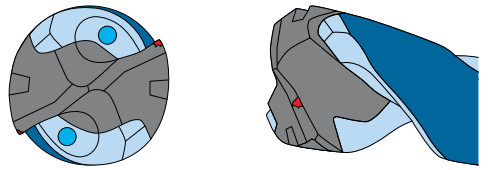
countermeasure
- reduce cutting speed
- reduce feed rate
- increase cooling



breakouts

problem
- tip angles do not match
- unstable conditions
- concentricity error
- feed rate too high
- too little cooling

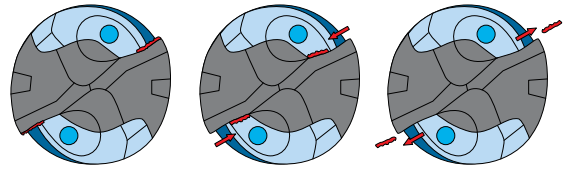
countermeasure
- check tip angle
- check clamping
- check concentricity
- reduce feed rate
- increase cooling



built-up edge

problem
- cutting speed too high/too low
- oil content of coolant too low

countermeasure
- increase cutting speed so that the built-up edge moves to the centre
- decrease cutting speed so that the built-up edge moves to the outer edge or is avoided
- increase coolant oil content



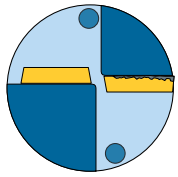
troubleshooting indexable insert drilling

rapid wear of the peripheral cutting edge

Flank wear is the preferred type of wear, if it is even.

Problem
- Cutting speed too high
- Not enough cooling
- Wrong cemented carbide type

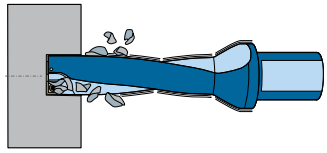
Countermeasures
- Reduce cutting speed
- Increase cooling
- Select a more wear-resistant carbide type



vibrations on the tool body

Problem
- Cutting speed too high
- Feed too high
- Not enough cooling

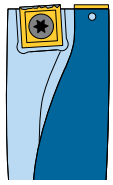
Countermeasure
- Reduce cutting speed
- Reduce the feed
- Increase cooling



Rapid wear of the inner cutting edge

Problem
- Workpiece surface uneven
- Unstable clamping conditions for tool/workpiece
- Wrong cemented carbide type

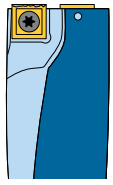
Countermeasure
- Reduce feed by 50%
- Check clamping of tool/workpiece
- Select more a durable cemented carbide type



Rapid wear of the outer cutting edge

Problem
- Feed too high
- Workpiece surface uneven
- Wrong cemented carbide type
- Wrong indexable insert geometry

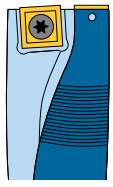
Countermeasure
- Reduce the feed
- Reduce feed by 50%
- Select more a durable cemented carbide type
- Insert indexable insert geometry for higher feeds



chips welding to the tool body

Problem
- Cutting speed too low (long-chipping)
- Feed too high (long-chipping)
- Feed too low
- Not enough cooling

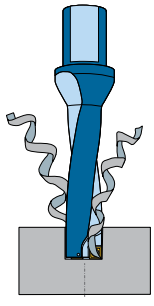
Countermeasure
- Increase cutting speed (long-chipping)
- Reduce feed (long-chipping)
- Increase the feed
- Increase cooling



long continuous chips are produced

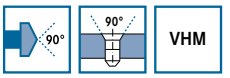
Problem
- Cutting speed too low (long-chipping)
- Feed too high (long-chipping)
- Feed too low
- Wrong indexable insert geometry

Countermeasure
- Increase cutting speed (long-chipping)
- Reduce feed (long-chipping)
- Increase the feed
- Insert indexable insert geometry for lower feeds



Conical countersink 90° solid carbide

Application:
For countersinking 90° screw heads or deburring of bores.



Advantage:
- Very wide range
- Many shank types and designs
- Very long service life thanks to high-quality solid carbide cutting material

Indexable insert countersink range
For standard plates CC..06, CC..09, CC..12

Application:
- Wide range of countersinks for use with ISO indexable inserts with CC.. Shape
- Single/double-edged cutter, adjustable and for reverse machining

Advantages:
- Wide range of countersinks
- Covers a large range of diameters
- Standard indexable inserts can be used
- Flexible use keeps tool costs to a minimum
- High-quality support material

			page

Conical countersink 90° solid carbide

Application:
For countersinking 90° screw heads or deburring of bores.

Advantage:
- Very wide range
- Many shank types and designs
- Very long service life thanks to high-quality solid carbide cutting material

ATORN SC 90° conical countersink, three flutes, extremely uneven pitch

For universal use up to 60 HRC

Application:
For producing 90° counterbores

Execution:
- profile-ground triple-edge countersink with radial relief

Advantage:
- Solid carbide cutting material for high service life requirements
- Uneven pitch ensures excellent surfaces without chatter marks and minimisation of cutting forces
- radial relief ensures optimum chip breaking

Prod. Gr. 114

ATORN Conical countersink, 90°, solid carbide, multi-flute cutter

For universal use up to 63 HRC

Application:
For countersinking 90° in the material groups steel, stainless steel, (non-ferrous metals), (cast materials) and special alloys up to a strength of 60 HRC.

Execution:
- profile-ground multi-edge countersink with radial relief

Advantage:
- excellent service life characteristics in Hardox 400 and 500, Creusabro, Inconel, Nimonic, Hastelloy, Monel, manganese-hardened steel, hardened steels up to 60 HRC, titanium and titanium alloy materials
- innovative and patented cutter geometry with a large number of cutters ensures excellent cutting performance and good surface qualities

Conical countersink 90°, HSS/HSSE

Application:
For countersinking 90° screw heads or deburring of bores.

Advantage:
- Very wide range
- Various cutting materials available
- Many shank types and designs

ATORN HSS/HSSE 90° countersink, 4 flute, extremely unequal pitch (DIN 335)

for universal use up to 1,300 N/mm²

HSS | HSSE | TiAlN plus | Z 4

Application:
Ident. No. 250–259: For producing 90° counterbores up to 1,000 N/mm².
Ident. No. 260–269: For producing 90° counterbores up to 1,300 N/mm².

Execution:
- Four-edged design with extremely unequal pitch
- **Ident. No. 250–259:** With three-flat shank
- **Ident. No. 260–269:** With 3-flat shank

Advantage:
- Up to 50 % faster countersinking
- Extremely smooth running
- Optimal countersinking pattern without chatter marks
- Much lower infeed force required
- Three-flat shank reduces spinning in the drill chuck

Ident. No. 260–269

ATORN HSSE 90° countersink, 3 flute, unequal spiral pitch (DIN 335)

for universal use up to 1,300 N/mm²

90° | HSSE | TiAlN plus | Z 3 | HA | ≠

Application:
For producing 90° counterbores up to 1,300 N/mm².

Execution:
- Three convex cutting edges with unequal spiral pitch

Advantage:
- Low-vibration cutting conditions
- Significant reduction in feed forces
- Perfectly round and chatter-free countersinks
- **Ident. No. 745–759:**
  - Three-flat shank prevents spinning in the drill chuck
  - Ideal for hand-held power tools

Ident. No. 730–744

Ident. No. 745–759

ATORN ORIONⓇ HSS 90° countersink, 3 flute, extremely unequal pitch (DIN 335)

for universal use up to 1,300 N/mm²

Application:
For producing 90° counterbores up to 1300 N/mm².

Execution:
- **Ident. No. 637–685:** profile-ground triple-edge countersink with radial relief, with extremely uneven pitch
- **Ident. No. 689–696:** Profile-ground triple-edge countersink with radial relief, with extremely uneven pitch

Advantage:
- Uneven pitch ensures excellent surfaces without chatter marks and minimisation of cutting forces
- **Ident. No. 637–685:** radial relief ensures optimum chip breaking
- **Ident. No. 670–696:** 3-sided shaft ensures very good power transmission and prevents the tool from spinning in the drill chuck or cordless drill
- **Ident. No. 689–696:** Radial relief ensures optimum chip breaking

Notes:
Ident. No. 689–696: Note: The 6.3-mm diameter design does not have a 3-face shaft

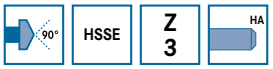
ATORN HSSE 90° countersink, 3 flute (DIN 335)

for universal use up to 1,300 N/mm²



Application:
For producing 90° counterbores up to 1300 N/mm².

Advantage:
- radial relief ensures optimum chip breaking

Execution:
- profile-ground triple-edge countersink with radial relief

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plastics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

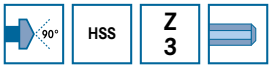
ATORN HSS 90° countersink, 3 flute with 3-flat shank

for universal use up to 1,000 N/mm²



Application:
For producing 90° counterbores up to 1000 N/mm².

Advantage:
- radial relief ensures optimum chip breaking
- three-edge shank ensures excellent power transmission in the chuck

Execution:
- profile-ground triple-edge countersink with three-edge shank with radial relief

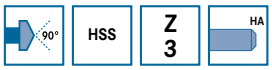
ATORN HSS 90° countersink, extra long

for universal use up to 1,000 N/mm²



Application:
For producing deep-set 90° counterbores up to 1000 N/mm².

Execution:
- **Ident. No. 300–455:** profile-ground extra-long triple-edge countersink
- **Ident. No. 541:** Profile-ground extra-long triple-edge countersink

Advantage:
- **Ident. No. 300–455:**
  - radial relief ensures optimum chip breaking
  - deep-set countersinks are made easy for the user
- **Ident. No. 541:**
  - Radial relief ensures optimum chip breaking

ORION® HSS 90° countersink with bit holder

for universal use up to 1,000 N/mm²

Application:
For countersinking, chamfering and deburring. For use in hand-held bit holders, electric hand drills and electric screwdrivers.

Execution:
- profile-ground

Advantage:
- Hexagonal shank, 1/4" provides a user-friendly tool chuck in the bit holder

ATORN HSSE 90° countersink, multi-flute cutter

for universal use up to 1300 N/mm²

Application:
For producing 90° counterbores up to 1300 N/mm².

Execution:
- Profile-ground multi-edge countersink with patented special cut

Advantage:
- excellent service life for Hardox 400, Creusabro, Inconel, Nimonic, Hastelloy, Monel, titanium and titanium alloy materials
- radial relief ensures optimum chip breaking
- innovative cutting geometry with greater number of cutters provides excellent cutting performance and good surface quality

ATORN HSS 90° countersink, multi-flute cutter (DIN 335)

for universal use up to 1,000 N/mm²

Application:
For producing 90° counterbores up to 1000 N/mm².

Execution:
- profile-ground multi-edge countersink with straight cutting edge

Advantage:
- high number of cutting edges for quiet cutting performance
- very good cutting performance and surface quality (chatter-free)

ATORN HSSE 90° countersink and deburring tool

for universal use up to 1,000 N/mm²

Application:
For producing 90° counterbores up to 1300 N/mm².

Execution:
- profile-ground single-edge countersink with radial relief

Advantage:
- radial relief ensures optimum chip breaking
- deep and wide flute provides optimum chip removal
- special geometry ensures vibration-free and accurate countersinking with high finish quality

Notes:
The grooves are milled from diameter of 15

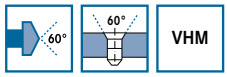
Conical countersink 60° solid carbide

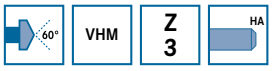
Application:
For countersinking 60° screw heads or deburring of bores.

Advantage:
- Very long service life thanks to high-quality solid carbide cutting material



ATORN Solid carbide 60° conical countersink, three-flute cutter (DIN 334)

for universal use up to 1300 N/mm²



Application:
For producing 60° counterbores up to 1300 N/mm².

Advantage:
- radial relief ensures optimum chip breaking

Execution:
- profile-ground triple-edge countersink with radial relief

Notes:
Diameter 8 mm = solid carbide/diameter 10-25 mm = solid carbide head and steel shank

Prod. Gr. 114

Conical countersink 60°, HSS/HSSE

Application:
For countersinking 60° screw heads or deburring of bores.

Advantage:
- Very wide range
- Various cutting materials available
- Many shank types and designs

ATORN HSS 60° countersink, triple-flute cutter, unequal spiral pitch (DIN 334)

for universal use up to 1,000 N/mm²

HSS | TiAlN plus | Z 3 | HA

Application:
For producing 90° counterbores up to 1,000 N/mm².

Execution:
- Three convex cutting edges with unequal spiral pitch

Advantage:
- Low-vibration cutting conditions
- Significant reduction in feed forces
- Perfectly round and chatter-free countersinks
- **Ident. No. 775–781:**
  - Three-flat shank prevents spinning in the drill chuck
  - Ideal for hand-held power tools

Ident. No. 768–774

ATORN HSS 60° conical countersink, three flutes, extremely uneven pitch (DIN 334)

for universal use up to 1300 N/mm²

60° | HSS | TiN/ZrN | Z 3 | HA | ≠

Application:
For producing 60° counterbores up to 1300 N/mm².

Execution:
- **Ident. No. 219–225:** Profile-ground triple-edge countersink with radial relief, with extremely uneven pitch
- **Ident. No. 227–233:** Profile-ground triple-flute countersink with radial relief, with extremely uneven pitch

Advantage:
- Radial relief ensures optimum chip breaking
- Uneven pitch ensures excellent surfaces without chatter marks and minimisation of cutting forces
- **Ident. No. 219–225:** 3-sided shaft ensures very good power transmission and prevents the tool from spinning in the drill chuck or even in the cordless drill

ATORN HSSE 60° conical countersink, single-flute cutter

for universal use up to 1300 N/mm²

Application:
For producing 60° counterbores up to 1300 N/mm².

Execution:
- profile-ground single-edge countersink

Advantage:
- radial relief ensures optimum chip breaking
- deep and wide flute provides optimum chip removal
- special geometry ensures vibration-free and accurate countersinking with high finish quality

Notes:
The grooves are milled from diameter of 15

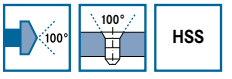
Conical countersink 100° HSS

Application:
For countersinking 100° rivet and screw heads or deburring of bores.



ATORN HSS 100° conical countersink, three-flute cutter
For universal use up to 1000 N/mm²

Application:
For producing 100° counterbores up to 1000 N/mm².

Advantage:
- Radial relief ensures optimum chip breaking
- Extremely smooth running and chatter-free countersinking in 100° countersinks

Execution:
- Profile-ground three-edge countersink with radial relief

ATORN HSSE 90° hand deburrer set, three-flute cutter with hexagon shank

for universal use up to 1000 N/mm²

90° | HSS | Z 3

Application:
For 90° counterboring and deburring for the material groups of steel, (stainless steel), non-ferrous metals and (cast iron) up to a strength of 1000 N/mm².

Execution:
- Profile-ground triple-edge countersink with radial relief on the blade

Advantage:
- Radial relief ensures optimum chip breaking
- Innovative cutting geometry provides excellent cutting performance and good finish quality

Notes:
All countersinks have a shank diameter of 6 mm

Technical data:
- Composition of set: 1 of each conical countersink 8/10/11.5/15/20.5

11511...	Ident. No.	900 ●

ATORN Handle with collet chuck

From hand deburrer set

Advantage:
- Hexagon socket in the handle prevents the tool from twisting in the handle

11511...	Ident. No.	530 ●

Prod. Gr. 1EB

ATORN HSS 90° hand deburring tool, three-flute cutter with hexagon shank

for universal use up to 1000 N/mm²

90° | HSS | Z 3

Application:
For 90° counterboring and deburring for the material groups of steel, (stainless steel), non-ferrous metals and (cast iron) up to a strength of 1000 N/mm² in individual part and series production.

Execution:
- profile-ground triple-edge countersink with radial back taper on the flute for the most demanding of requirements for dimensional tolerance and process reliability

Advantage:
- radial relief ensures optimum chip breaking
- precision grinding for the most demanding requirements in terms of dimensional accuracy
- innovative cutting geometry provides excellent cutting performance and good finish quality

Notes:
All countersinks have a shank diameter of 6 mm

Prod. Gr. 1EB

Indexable insert countersink range
For standard plates CC..06, CC..09, CC..12

Application:
- Wide range of countersinks for use with ISO indexable inserts with CC.. Shape
- Single/double-edged cutter, adjustable and for reverse machining

Advantages:
- Wide range of countersinks
- Covers a large range of diameters
- Standard indexable inserts can be used
- Flexible use keeps tool costs to a minimum
- High-quality support material

ATORN Reversible tip fine boring rod, single tooth cutter, adjustable
For universal application up to 1300 N/mm² with CC..06 and CC..09 Indexable inserts

Z 1 | HB

Application:
boring and drill out with CC.. indexable inserts in the diameter range from 10.00–50.00 mm in the material groups steel, stainless steel, non-ferrous metals, cast materials and special alloys.

Execution:
- Support material made from high-grade steel with adjusting range and clamping surface in line with DIN 1835B

Advantage:
- low cost boring and reaming tool with large adjustment range
- standard CC.. indexable inserts can be used, thereby optimising procurement and minimising tool costs
- nickel-plated tool for high corrosion-resistance

ATORN Indexable insert countersink, single tooth cutter
For universal use up to 1300 N/mm² with CC..06 and CC..09 indexable inserts

IK | Z 1 | HB

Application:
180° countersinks with CC.. indexable inserts in the diameter range 10.00-33.00 mm, in the material groups of steel, stainless steel, non-ferrous metals, cast materials and special alloys for use in single part and series production.

Execution:
- Backing material made from high-grade steel with clamping surface in line with DIN 1835B

Advantage:
- Precisely fitting inserts ensure optimal machining results even under difficult conditions
- Universal use in all material groups
- Cost-efficient tool in comparison with mono-block solutions

ATORN Indexable insert countersink, dual cutter

For universal application up to 1300 N/mm², with CC..06 and CC09.. Indexable inserts

Z 2 | IK | HB

Application:
180° countersinks with CC.. indexable inserts in the diameter range from 10.00–33.00 mm, in the material groups steel, stainless steel, non-ferrous metals, cast materials and special alloys for use in single part and series production.

Execution:
- backing material made from high-grade steel with clamping surface in line with DIN 1835B

Advantage:
- precision-engineered insert seat and two blades ensure optimum machining results and smooth running even under difficult operating conditions
- universal use in all material groups
- cost-efficient tool in comparison with mono-block solutions

ATORN Indexable insert reverse boring bar, 1 flute

for universal use up to 1,300 N/mm² with CC..06, CC..09, CC..12 and CP..05T1 indexable inserts

Z 1 | IK | HE

Application:
180° back countersinks with CC.. and CP.. indexable inserts in the diameter range of 15.00-76.00 mm, in the steel, stainless steel, non-ferrous metal, casting material and special alloy material groups for use in individual part and series production.

Execution:
- backing material made from high-grade steel with clamping surface as per DIN 1835E
- Note: 1125150 + 11251180 do not feature internal cooling

Advantage:
- Standard CC.. and CP.. indexable inserts can be used, which optimises procurement and minimises tool costs
- precisely fitting inserts ensure optimum machining results even under difficult conditions
- nickel-plated tool for high corrosion-resistance

ATORN ORION® 180° counterbore (DIN 373)

for tapping holes

HSS | HSSE | 180° | HA

Application:
For producing 180° counterbores for thread core holes in accordance with DIN 74-2, types H, J, K and DIN 974-1.

Execution:
- profile-ground with spiral blade

Advantage:
- spiral chip flutes ensure smooth cutting and the blade does not catch

ATORN ORION 180° counterbore (DIN 373)

for fine through holes

HSS | HSSE | TiN | 180° | HA

Application:

No. 11442–11445: For producing counterbores 180° fine quality grade for through hole to DIN 74-2, forms H, J, K and DIN 974-1.

No. 11451: For producing 180° counterbores of fine quality grade for through holes in accordance with DIN 74-2, type H, J, K and DIN 974-1.

Execution:

- profile-ground with spiral blade

Advantage:

- spiral chip flutes ensure smooth cutting and the blade does not catch
- precision grinding for highest requirements in terms of concentricity and dimensional accuracy

No. 11442–11445

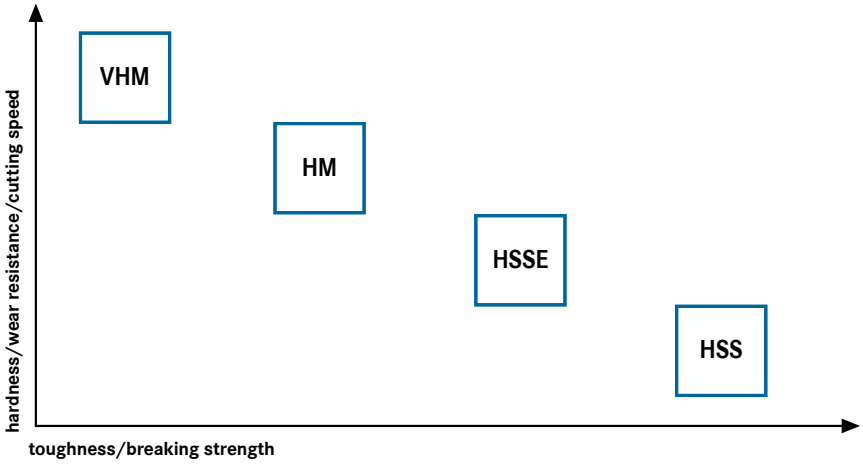
Cutting materials of reamers



Solid carbide
- Cutting material for applications up to 63 HRC
- High cutting speed
- High precision

Carbide carrier equipped with carbide
- Highly elastic
- High cutting speed
- High precision

HSSE high-speed steel
- Cutting material for applications up to 1300 N/mm^2
- Low to medium cutting speeds
- Approx. 5 % cobalt content
- Extremely high elasticity

HSS high-speed steel
- Cutting material for applications up to 1000 N/mm^2
- Low cutting speeds
- Low alloy content
- Extremely high elasticity

Coatings for reamers

Titanium aluminium nitride
- Universal coating for high-performance machining with high cutting speeds
- Thermally and chemically very stable
- Very high hardness
- Very good heat resistance
- Relatively low heat conductivity
- Vickers hardness: 3,200 HV
- Steel friction coefficient: 0.55
- Temperature resistance: 900-1,000°
- Colour: dark blue/grey
- Coating method: PVD

TiAlN

Titanium carbon nitride
- Very high hardness
- High adhesive strength
- Relatively high thermal conductivity
- Low friction coefficient against steel
- Vickers hardness: 3500 HV
- Friction coefficient of steel: 0.2
- Temperature resistance: 400°
- Colour: blue-grey
- Coating process: PVD

TiCN

Titanium aluminium silicon nitride
- High performance machining for processing very abrasive or hard materials such as steel up to 63 HRC
- Very high hardness
- High wear resistance
- Vickers hardness: 3,500 HV
- Steel friction coefficient: 0.70
- Temperature resistance: 900°
- Colour: blue/purple
- Coating method: PVD

TiAlSiN

Titanium aluminium carbon nitride
- Universal layer for high-performance machining with high cutting speed
- Low friction
- Very high hardness
- High oxidation resistance
- Relatively low thermal conductivity
- Vickers hardness: 3500 HV
- Friction coefficient of steel: 0.20
- Temperature resistance: 800°
- Colour: antique pink
- Coating process: PVD

TiAlCN

Coverable tolerance classes with 1/100 reamers

with 1/100 reamers, available in increments of 0.01 mm, various fit tolerance dimensions can be catered to. the system ranges up to a diameter of 12.10mm. a brief example would be, for instance, a 1/100 reamer 11.03mm capable of producing a fit tolerance of 11.0 F8. further fit tolerance dimensions catered to are shown in the table below.

hole tolerance table for 1/100 machine reamers:

Hole Ø (mm)	C8	C9	C10	C11	CD7	D7	D8	D9	D10	D11	D12	E7	E8	E9	EF8	F7	F8	F9

Solid carbide HPC machine reamers modular

Application:
For producing clearances in medium to large batch sizes for the diameters 10.00 mm - 40.00 mm

H7 VHM

Advantage:
- Steel/cast iron and stainless steel geometries available for through hole and blind hole machining
- High-precision tool change also possible in the machine
- Perfect system concentricity thanks to ground thread and tapered contact face
- Innovative rake provides very high stability and process reliability, with very high cutting parameters
- Hard-to-reach clearances can be produced owing to various bracket lengths
- Longer service life due to innovative coatings
- Perfect chip removal owing to coolant outlet directly on the cutter
- HPC reamers available on request as H7
- Diameters and clearances can be ordered individually with short delivery times

Solid carbide HPC machine reamers

Application:
For series manufacture of clearances on modern CNC machines with stable tool and workpiece clamping.

H7 | 0,001 | 0,00X | VHM

Advantage:
- Innovative rake provides very high stability and process reliability, with very high cutting parameters
- High-quality solid carbide cutting material and coating ensure a very long service life
- Innovative coating technology ensures longer service life
- Internal cooling ensures optimal transportation of chips
- Wide range with specialist tools for the most common materials
- Diameters and clearances can be ordered individually with short delivery times
- HPC reamers as H7, 1/100 mm and special reamers available
- All geometries available for through hole and blind hole machining

		Ø	Tolerance of fit	Hole type	P 1000 N/mm²	P 1300 N/mm²	M	N	K	H 65HRC		page

Solid carbide machine reamers H7

Application:
For cutting H7 fit tolerances on conventional machines and CNC machines.

H7 | VHM

Advantage:
- All diameters from 1.00 mm to 20.00 mm available
- Various different types of reamers
- Extremely long service life
- High cutting values can be achieved
- Very precise grinding according to DIN1420
- Other allowances available on request

		Ø	Cutting material	P 700 N/mm²	P 1000 N/mm²	P 1300 N/mm²	M	N	K	S		page

Solid carbide machine reamers 1/100 mm

Application:
For cutting high-precision fit tolerances (0/+0.003 mm) on conventional machines and CNC machines.

0,001 | VHM

Advantage:
- Covers a wide range of fit tolerances
- No special reamers have to be produced
- Deliverable from stock
- High cutting values can be achieved
- All diameters from 0.90 mm to 12.03 mm available
- High level of precision thanks to narrow tolerance (0/+0.003 mm)
- Very long service life thanks to high-quality solid carbide cutting material

HSSE machine reamers H7

Application:
For cutting H7 fit tolerances on conventional machines and CNC machines.

H7 | HSSE

Advantage:
- All diameters from 1.00 mm to 40.00 mm available
- Various different types of reamers
- Extremely long service life
- Very precise grinding according to DIN 1420
- Coated versions for higher cutting values
- Other allowances available on request

HSSE machine reamers 1/100 mm

Application:
For cutting high-precision fit tolerances (0/+0.003 mm) on conventional machines and CNC machines.

0,001 | HSSE

Advantage:
- Covers a wide range of fit tolerances
- No special reamers have to be produced
- Deliverable from stock
- All diameters from 0.90 mm to 12.03 mm available
- High level of precision thanks to narrow tolerance (0/+0.003 mm)
- Lower-cost alternative to a solid carbide tool

HSSE machine reamers with selectable diameter and fit

Application:
For cutting individually selectable fit tolerances on conventional machines and CNC machines.

0,00X | HSSE

Advantage:
- Broad range of diameters from 0.95 mm to 20.00 mm
- Individually selectable diameters and tolerances
- Short delivery times
- Extremely long service life
- Very precise grinding according to DIN 1420
- For universal use

HSS/HSSE rivet hole reamers and machine taper reamers

Application:
For the production of conical tolerances for tapered pins and rivet holes on conventional and CNC machines.

HSS | HSSE

Advantage:
- Wide range
- Very good surfaces can be achieved
- Different shank variants
- Very high feed rates can be achieved
- Other allowances available on request

HSS hand reamers

Application:
For manually producing H7 or 1/100 tolerances and reworking existing tolerances

HSS | H7 | 0,001

Advantage:
- Cost-effective alternative for manual work
- Long threaded start to correctly align the reamer
- Adjustable variants
- Straight and spiral designs
- The square shank serves as a carrier
- For universal use

ARE YOU A MACHINING MASTER?
WE HAVE WHAT IT TAKES.
Do you need more than just a hammer, pair of pliers or a screwdriver?
We have the full range for you. Machining tools, handling systems and
measuring technology. However, we also offer tailor-made system solutions,
large and small machinery and complete factory equipment.
In total, more than 120,000 products.

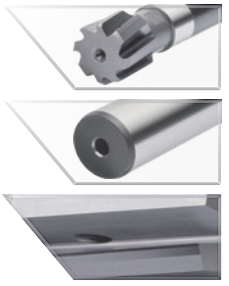
Solid carbide HPC machine reamers modular

Application:
For producing clearances in medium to large batch sizes for the diameters 10.00 mm - 40.00 mm

H7 | VHM

Advantage:
- Steel/cast iron and stainless steel geometries available for through hole and blind hole machining
- High-precision tool change also possible in the machine
- Perfect system concentricity thanks to ground thread and tapered contact face
- Innovative rake provides very high stability and process reliability, with very high cutting parameters
- Hard-to-reach clearances can be produced owing to various bracket lengths
- Longer service life due to innovative coatings
- Perfect chip removal owing to coolant outlet directly on the cutter
- HPC reamers available on request as H7
- Diameters and clearances can be ordered individually with short delivery times



ATORN Interchangeable head reamer SC HPC

For use in steel, casting materials and stainless steel

VHM | TiAlN | H7 | HPC UNI | HPC VA | 10° | IK

Application:
For HPC reaming of through holes in the diameter range 10.00 mm–40.00 mm

Execution:
- Left-hand diagonal toothing with extremely uneven pitch

Advantage:
- System concentricity in installed state <5 µ
- Internal cooling ensures optimal transportation of chips
- Ground thread and tapered flat face for maximum changeover accuracy and high strength
- Various holder lengths available
- Simple to change in the machine

Notes:
Configurable dimensions available on request. Note: Please refer to dimension table.

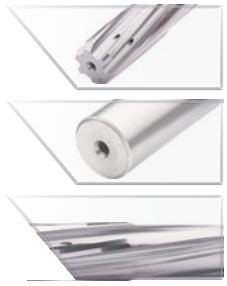
Solid carbide HPC machine reamers

Application:
For series manufacture of clearances on modern CNC machines with stable tool and workpiece clamping.

H7 | 0,001 | 0,00X | VHM

Advantage:
- Innovative rake provides very high stability and process reliability, with very high cutting parameters
- High-quality solid carbide cutting material and coating ensure a very long service life
- Innovative coating technology ensures longer service life
- Internal cooling ensures optimal transportation of chips
- Wide range with specialist tools for the most common materials
- Diameters and clearances can be ordered individually with short delivery times
- HPC reamers as H7, 1/100 mm and special reamers available
- All geometries available for through hole and blind hole machining



ATORN Solid carbide TiALN high-performance reamer

For universal use up to 1,300 N/mm²

VHM | TiAlN | H7 | HPC UNI | 0° | ≈7–8° | HA | IK

p. 175 p. 176 p. 208

Application:
Ident. No. 050–058, 062–090, 094–122, 126–140, 142–158, 162–178, 182–198, 202–218, 222–238, 242–286, 359, 391, 423, 441, 459, 479, 499, 519, 539, 604–628: for cutting fit tolerances **in through holes** on modern CNC machines with steady tool and workpiece clamping up to 1300 N/mm².
Ident. No. 059, 091, 123, 141, 159, 179, 199, 219, 239, 350–358, 362–390, 394–422, 426–440, 442–458, 462–478, 482–498, 502–518, 522–538, 542–586, 633–657: for cutting fit tolerances **in blind holes** on modern CNC machines with steady tool and workpiece clamping up to 1300 N/mm².

Execution:
- **Ident. No. 050–058, 062–090, 094–122, 126–140, 142–158, 162–178, 182–198, 202–218, 222–238, 242–286, 359, 391, 423, 441, 459, 479, 499, 519, 539, 604–628:** 7–8° left-hand spiral, extremely variable pitch and inner cooling, **type B**
- **Ident. No. 059, 091, 123, 141, 159, 179, 199, 219, 239, 350–358, 362–390, 394–422, 426–440, 442–458, 462–478, 482–498, 502–518, 522–538, 542–586, 633–657:** Straight grooved with extremely variable pitch and internal cooling, **type A**

Advantage:
- innovative cutting geometry ensures excellent dimensional accuracy and process reliability for very high cutting parameters
- high-quality solid carbide cutting material and coating ensure a very long service life
- Internal cooling ensures optimum chip removal

Notes:
Ident. No. 050–586: Make sure that tools are accurately and tightly clamped (ideally use a hydro-mechanical clamping chuck or precision collet chuck). Note: Please refer to dimension table.
Ident. No. 604–657: Make sure that tools are accurately and tightly clamped (ideally use a hydro-mechanical clamping chuck or precision collet chuck). When ordering, specify the desired fit and diameter (e.g. 8.05 H7) take care! Please refer to dimension table.

LET‘S WORK TOGETHER.
Do you need more than just a hammer, pair of pliers or a screwdriver?
We have the full range for you. Machining tools, handling systems and
measuring technology. However, we also offer tailor-made system solutions,
large and small machinery and complete factory equipment.
In total, more than 120,000 products.

Solid carbide machine reamers H7

Application:
For cutting H7 fit tolerances on conventional machines and CNC machines.

H7 | VHM

Advantage:
- All diameters from 1.00 mm to 20.00 mm available
- Various different types of reamers
- Extremely long service life
- High cutting values can be achieved
- Very precise grinding according to DIN1420
- Other allowances available on request

ATORN NC machine reamer, solid carbide with standard shank (DIN 8093 similar)

For universal use up to 1,300 N/mm²

VHM | H7 | ≈7-8° | HA

Application:
For producing H7 fit tolerances in through holes on NC machines up to 1300 N/mm².

Advantage:
- good bore hole quality (dimensional tolerance, roundness, surface quality)

p. 175 p. 176 p. 208

Execution:
- 7-8° left-hand spiral, type B

ORION® NC machine reamer, solid carbide with standard shank (DIN 8093)

For universal use up to 1,300 N/mm²

VHM | H7 | ≈7–8° | HA

Application:

For producing H7 fit tolerances in through holes on NC machines up to 1300 N/mm².

Advantage:

- good bore hole quality (dimensional tolerance, roundness, surface quality)

p. 175 p. 176 p. 208

Execution:

- 7-8° left-hand spiral, type B

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

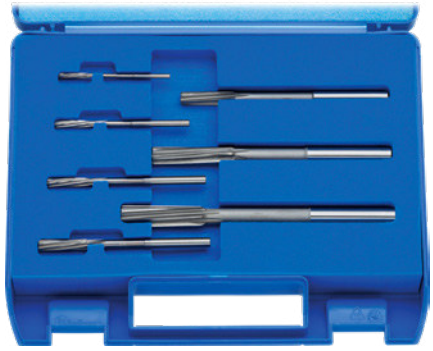
ATORN Carbide machine reamer set (DIN 8093)

For universal use up to 1,300 N/mm²

HM | H7 | ≈7–8° | HA



Application:
for producing H7 fit tolerances in through holes on conventional machines and NC machines up to 1300 N/mm².

Advantage:
- good bore hole quality (dimensional tolerance, roundness, surface quality)
- sturdy box protects the tool

Execution:
- 7-8° left-hand spiral and variable pitch, type B

Composition of set		3 / 4 / 5 / 6 / 8 / 10 / 12
Tolerance of fit		H7

Prod. Gr. 1BJ

Solid carbide machine reamers 1/100 mm

Application:
For cutting high-precision fit tolerances (0/+0.003 mm) on conventional machines and CNC machines.

0,001 | VHM

Advantage:
- Covers a wide range of fit tolerances
- No special reamers have to be produced
- Deliverable from stock
- High cutting values can be achieved
- All diameters from 0.90 mm to 12.03 mm available
- High level of precision thanks to narrow tolerance (0/+0.003 mm)
- Very long service life thanks to high-quality solid carbide cutting material

ATORN NC machine reamer, solid carbide with standard shank (DIN 8093 similar)

For universal use up to 1,300 N/mm²

Application:
for producing fit tolerances (tolerance = 0/+0.003 mm) in through holes on NC machines up to 1300 N/mm².

Execution:
- 7–8° left-hand spiral, type B

Advantage:
- good bore hole quality (dimensional tolerance, roundness, surface quality)

Prod. Gr. 1BJ

HSSE machine reamers H7

Application:
For cutting H7 fit tolerances on conventional machines and CNC machines.

H7 | HSSE

Advantage:
- All diameters from 1.00 mm to 40.00 mm available
- Various different types of reamers
- Extremely long service life
- Very precise grinding according to DIN 1420
- Coated versions for higher cutting values
- Other allowances available on request

ATORN ORION® HSSE NC machine reamers (DIN 212)

For universal use up to 1,000 N/mm²

HSSE | H7 | ≈7–8° | HA

Application:
for cutting H7 fit tolerances in through holes and blind holes on NC machines or conventional machines up to 1000 N/mm².

Execution:
- **No. 11628 010–11628 027, 11638 010–11638 025:** 7-8° left-hand spiral, **type B, with centring points on both sides** and continuous shank
- **No. 11628 028–11628 200, 11638 030–11638 200:** 7-8° left-hand spiral, **type D, with centring hole** and offset shank

Advantage:
- good bore hole quality (dimensional tolerance, roundness, surface quality)

No. 11628 010–11628 027

No. 11628 028–11638 200

p. 175 p. 176 p. 208

ATORN = Prod. Gr. 1BH
ORION = Prod. Gr. 104

ATORN ORION HSSE machine reamers (DIN 212)

For universal use up to 1,000 N/mm²

No. 11630

No. 11633

No. 11634

p. 175 p. 176 p. 208

Application:

No. 11630–11633: for cutting H7 fit tolerances in blind holes on conventional machines and NC machines up to 1000 N/mm².

No. 11634: for producing H7 fit tolerances in through holes on conventional machines and NC machines up to 1000 N/mm².

Execution:

- **No. 11630 010–11630 025, 11633 015–11633 025:** straight design, type A, with continuous shank and lathe centre on both sides
- **No. 11630 030–11630 200, 11633 030–11633 160:** straight design, type C, with reduced shank and centring hole on both sides
- **No. 11634 015–11634 025:** 7-8° left-hand spiral, type B, with continuous shank and centring point on both sides
- **No. 11634 030–11634 200:** 7-8° left-hand spiral, type D, with reduced shank and centring hole on both sides

Advantage:

- good bore hole quality (dimensional tolerance, roundness, surface quality)

ATORN NC machine reamer sets (DIN 212 similar)

For universal use up to 1,300 N/mm²

Application:

Ident. No. 050: For producing H7 fit tolerances in through holes on NC machines or conventional machines up to 1000 N/mm².

Ident. No. 060–070: For producing H7 fit tolerances in through holes on a NC machine or conventional machines up to 1000 N/mm².

Execution:

- 7-8° left-hand spiral and variable pitch, type B

Advantage:

- good bore hole quality (dimensional tolerance, roundness, surface quality)

ATORN HSSE machine reamer, extra long (DIN 212 similar)

For universal use up to 1,000 N/mm²

p. 175 p. 176 p. 208

Application:

For producing H7 fit tolerances in deep-set through holes up to 1000 N/mm².

Execution:

- 10° left-hand spiral, long design

Advantage:

- good bore hole quality (dimensional tolerance, roundness, surface quality)
- long design ensures good accessibility for deep-set or difficult-to-reach drill holes

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plastics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

Prod. Gr. 1BJ

ORION® HSSE machine bottoming reamer

For universal use up to 1,000 N/mm²

Application:
for cutting H7 fit tolerances with precisely defined drill spacings (tolerance of pre-drilling counterbalanced) on conventional machines and NC machine up to 1000 N/mm². the face cut overcomes the eccentricity between the bore and tool axis and does not follow the pilot hole.

Execution:
- straight-grooved, teeth around the circumference with circular grinding chamfer to the duct

Advantage:
- good bore hole quality (dimensional tolerance, roundness, surface quality)
- a groove is inserted for each to improve the supply of coolant

p. 175 p. 176 p. 208

Prod. Gr. 104

ATORN ORION® HSSE machine reamers (DIN 208)

For universal use up to 1,000 N/mm²

No. 11636

No. 11641

No. 11642

Application:
No. 11636 030–11636 320, 11642 030–11642 400: for producing H7 fit tolerances in through holes on conventional machines and NC machines up to 1000 N/mm².
No. 11641: for cutting H7 fit tolerances in blind holes on conventional machines and NC machines up to 1000 N/mm².

Execution:
- **No. 11636 030–11636 320, 11642 030–11642 400:** 7-8° left-hand spiral, type B
- **No. 11641:** straight version

Advantage:
- good bore hole quality (dimensional tolerance, roundness, surface quality)

p. 175 p. 208

ATORN = Prod. Gr. 1BH
ORION = Prod. Gr. 104

ATORN HSSE machine reamer, extra long (DIN 208 similar)

For universal use up to 1,000 N/mm²

Application:
for producing H7 fit tolerances in deep-set or difficult-to-reach through holes on conventional machines and NC machines up to 1000 N/mm².

Execution:
- 10° left-hand spiral, type B, long design

Advantage:
- good bore hole quality (dimensional tolerance, roundness, surface quality)
- long design ensures good accessibility for deep-set or difficult-to-reach drill holes

p. 175

Prod. Gr. 1BJ

HSSE machine reamers 1/100 mm

Application:
For cutting high-precision fit tolerances (0/+0.003 mm) on conventional machines and CNC machines.

0,001 | HSSE

Advantage:
- Covers a wide range of fit tolerances
- No special reamers have to be produced
- Deliverable from stock
- All diameters from 0.90 mm to 12.03 mm available
- High level of precision thanks to narrow tolerance (0/+0.003 mm)
- Lower-cost alternative to a solid carbide tool

ATORN NC machine reamer 1/100 mm HSSE with standard shaft (DIN 212 similar)

For universal use up to 1,000 N/mm²

Application:
for producing fit tolerances in through holes (tolerance=0/+0.003 mm) on NC machines or conventional machines up to 1000 N/mm².

Execution:
- **Ident. No. 009–019, 247–998:** 7-8° left-hand spiral, **type D, with centring hole** and offset shank
- **Ident. No. 100–203:** 7-8° left-hand spiral, **type B, with centring points on both sides** and continuous shank

Advantage:
- good bore hole quality (dimensional tolerance, roundness, surface quality)

Ident. No. 009–019, 247–998

Ident. No. 100–203

Prod. Gr. 1BH

ATORN NC machine reamer set, 1/100 mm HSSE with standard shaft (DIN 212 similar)

For universal use up to 1,000 N/mm²

Application:
For producing fit tolerances in through holes (nominal size=0/+0.003 mm) on a NC machine or conventional machines up to 1000 N/mm².

Execution:
- 7-8° left-hand spiral, type B up to diameter 2.03 mm with dual-sided centring point and continuous shank, type D from diameter 2.98 mm with centring hole and offset shank

Advantage:
- good bore hole quality (dimensional tolerance, roundness, surface quality)

p. 175 p. 176 p. 208

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plastics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

Prod. Gr. 1BH

HSSE machine reamers with selectable diameter and fit

Application:
For cutting individually selectable fit tolerances on conventional machines and CNC machines.

0,00X | HSSE

Advantage:
- Broad range of diameters from 0.95 mm to 20.00 mm
- Individually selectable diameters and tolerances
- Short delivery times
- Extremely long service life
- Very precise grinding according to DIN 1420
- For universal use

ATORN HSSE NC machine reamer with standard shank (fit tolerance and diameter can be selected) (DIN 212 similar)

For universal use up to 1,000 N/mm²

HSSE | ≈7–8° | HA

Application:
for producing fit tolerances in through holes on NC machines or conventional machines up to 1000 N/mm².

Execution:
- 7–8° left-hand spiral, type B

Advantage:
- high-quality HSSE cutting material for a very long service life
- good bore hole quality (dimensional tolerance, roundness, surface quality)
- **No. 11624:** Diameter and fit can be ordered to suit, shortest possible delivery time
- **No. 11625:** Delivered ex stock

Notes:
No. 11624: Caution: when ordering, specify the **diameter and fit tolerance** (for example 8.53 H7)
No. 11625: When ordering, please only enter the diameter. The tolerance cannot be selected (e.g. 8.53 mm +0.005 mm)

p. 175 p. 176 p. 208

Prod. Gr. 1BK

HSS/HSSE rivet hole reamers and machine taper reamers

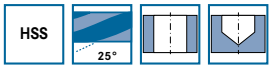
Application:
For the production of conical tolerances for tapered pins and rivet holes on conventional and CNC machines.

HSS | HSSE

Advantage:
- Wide range
- Very good surfaces can be achieved
- Different shank variants
- Very high feed rates can be achieved
- Other allowances available on request

ORION® HSS rivet hole reamer (DIN 311)

For universal use up to 1,000 N/mm²



Application:
For reaming rivet holes that must be perfectly aligned to one another. On both conventional machines and NC machines up to 1000 N/mm².

Execution:
- 25° left-hand spiral, cone-shaped section 1:10 on taper lead length

Advantage:
- good bore hole quality (dimensional tolerance, roundness, surface quality)
- excellent cutting performance due to stripping cut

Technical data:
- Min. diameter: 30.0 mm
- Max. diameter: 10.0 mm

ATORN High-helix taper pin shell reamers 1:50 (DIN 2179)

For universal use up to 1,000 N/mm²

Application:
for cutting tapered fit tolerances 1:50 for taper pins in accordance with DIN 258, DIN EN 22339, 28737, 28736 on conventional machines and NC machines up to 1000 N/mm².

Execution:
- 45° left-hand spiral, 1:50 taper and straight shank with retaining lugs

Advantage:
- good bore hole quality (dimensional tolerance, roundness, surface quality)

Prod. Gr. 1BH

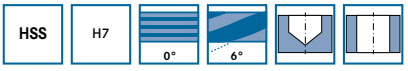
HSS hand reamers

Application:
For manually producing H7 or 1/100 tolerances and reworking existing tolerances

Advantage:
- Cost-effective alternative for manual work
- Long threaded start to correctly align the reamer
- Adjustable variants
- Straight and spiral designs
- The square shank serves as a carrier
- For universal use

ATORN ORION® HSS hand reamers

For universal use up to 1,000 N/mm²



No. 11602 015–11602 400, 11604 015–11604 400

No. 11603

Application:
No. 11602 015–11602 400, 11604 015–11604 400: For cutting H7 fit tolerances manually in through holes or with interrupted cutting conditions up to 1000 N/mm².
No. 11603: For cutting H7 fit tolerances manually in the blind hole up to 1000 N/mm².

Execution:
- **No. 11602 015–11602 400, 11604 015–11604 400:** 6° left-hand spiral, uneven pitch and long notch shape
- **No. 11603:** 7-8° left-hand spiral, uneven pitch and long notch shape

Advantage:
- Good bore hole quality (dimensional tolerance, roundness, surface quality)

ATORN® = Prod. Gr. 1BH
ORION = Prod. Gr. 104

ATORN HSS hand reamer set (DIN 206)

For universal use up to 1,000 N/mm²

Application:
For cutting H7 fit tolerances manually in through holes or with interrupted cutting conditions up to 1000 N/mm².

Execution:
- 6° left-hand spiral, uneven pitch and long notch shape

Advantage:
- Good bore hole quality (dimensional tolerance, roundness, surface quality)

Composition of set		Diameters 1.5/2/2.5/3/3.5/4/4.5/5/5.5/6/6.6/7/7.5/8/8.5/9/9.5/10

ORION® Adjustable HSS hand reamer (DIN 859)

For universal use up to 1,000 N/mm²

HSS

Application:
For cutting custom fit tolerances with minimal oversize up to 1000 N/mm².

Execution:
- 7-8° left-hand spiral, with guide and counter-nut, from diameter 8 with slotted design, reamers are ground to the nominal size. The adjustability lies within the elasticity limits of steel and is 1/100 of the diameter.
- ISO-square according to DIN 10

Advantage:
- Individual cutting of fit tolerances by hand
- User-friendly adjustment

Notes:
Store reamers in untensioned state! Adjustability: dia. 6 mm–10 mm approx. 0.10 mm, adjustable diameter 11 mm–15 mm, approx. 0.15 mm, adjustable diameter 16 mm–22 mm, approx. 0.20 mm, adjustable diameter 23 mm–30 mm, approx. 0.30 mm adjustable

ATORN Reamer, quick-adjustment

For universal use up to 1,000 N/mm²

HSS

Application:
For cutting custom fit tolerances with respective adjustment range up to 1000 N/mm².

Execution:
- Straight design, the blades are relief ground eccentrically and circular ground before cutting; the circular grinding step guarantees excellent guidance and ensures centric cutting, reamer adjustment range is marked both in millimetres and inches (with setting scale from 12 mm diameter [1 increment = 0.01 mm])
- ISO-square according to DIN 10

Advantage:
- Individual cutting of fit tolerances by hand
- User-friendly adjustment

ATORN HSS hand taper reamers 1: 50 (DIN 9)

For universal use up to 1,000 N/mm²

No. 11672

No. 11673

Application:

No. 11672: For cutting tapered fit tolerances 1:50 (without cutting interruption) manually up to 1000 N/mm².

No. 11673: For cutting tapered fit tolerances 1:50 (also suitable for cutting interruption) manually up to 1000 N/mm².

Execution:

- **No. 11672:** Straight grooves, with conical cutter, type A
- **No. 11673:** Twisted with conical cutter, type B

Advantage:

- Good bore hole quality (dimensional tolerance, roundness, surface quality)

Prod. Gr. 1BH

Mounting instructions SC HPC machine reamer modular
Mounting of solid carbide interchangeable heads

Note: To avoid the risk of injury, we recommend wearing gloves

1. Clean the interchangeable head with compressed air and a cloth on the tapered contact face and thread.

2. Clean the interchangeable head holder with compressed air and a cloth on the tapered contact face and thread.

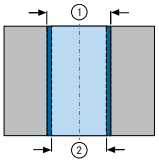
3. Then screw the interchangeable head clockwise by hand into the interchangeable head holder. Afterwards, clamp the interchangeable head holder and tool into the machine holder.

4. Position the torque wrench as horizontally as possible onto the interchangeable head without tilting the wrench surface.
Tighten the interchangeable head using the torque wrench and the appropriate open-end plug-in tool to the specified tightening torque.

Tightening torques of the interchangeable heads:

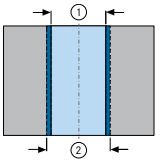
Separation point size WKS	Tightening torque [Nm]
6	5
8	12,5
10	15
12	20
16	25

Troubleshooting when reaming



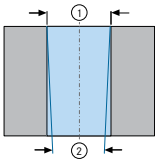
① Reaming dimension
② Nominal dimension

Bore hole too large
- Cutting speed too high
- Tool diameter too large
- Formation of built-up edges
- Reamer cut too short or uneven
- Excessive amount of oil in the cooling lubricant
- Radial run-out of the spindle or tool
- Misalignment between drill bit and reamer



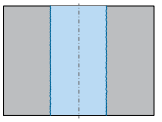
Bore hole too small
- Cutting speed too low
- Very thin-walled workpiece
- Tool wear limit reached
- Insufficient reaming allowance

① Reaming dimension ② Nominal dimension

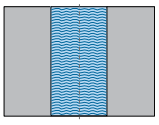


Bore hole is tapered
- Radial run-out of the spindle or tool
- Pre-bored hole too imprecise
- Misalignment between drill bit and reamer
- Incorrect angle

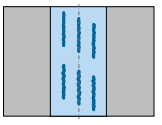
① Reaming dimension ② Incorrect dimension



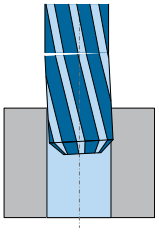
Poor surface quality
- Poor chip removal
- Cutting speed/feed too high
- Built-up edges due to insufficient or no cooling
- Breakouts at the tool cutting edge
- Existing poor surface created during pre-drilling



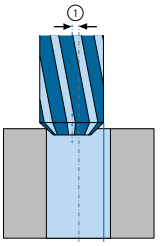
Feed scoring marks in the bore hole
- Breakouts at the tool cutting edge
- Cutting speed/feed too low
- Tool wear limit reached
- Formation of built-up edges
- Misalignment between drill bit and reamer



Chatter marks in the bore hole
- Formation of built-up edges
- Insufficient amount of oil in the cooling lubricant
- Insufficient reaming allowance
- Reamer clamped incorrectly or too loosely
- Radial run-out of the spindle or tool
- Circular grinding chamfer too narrow

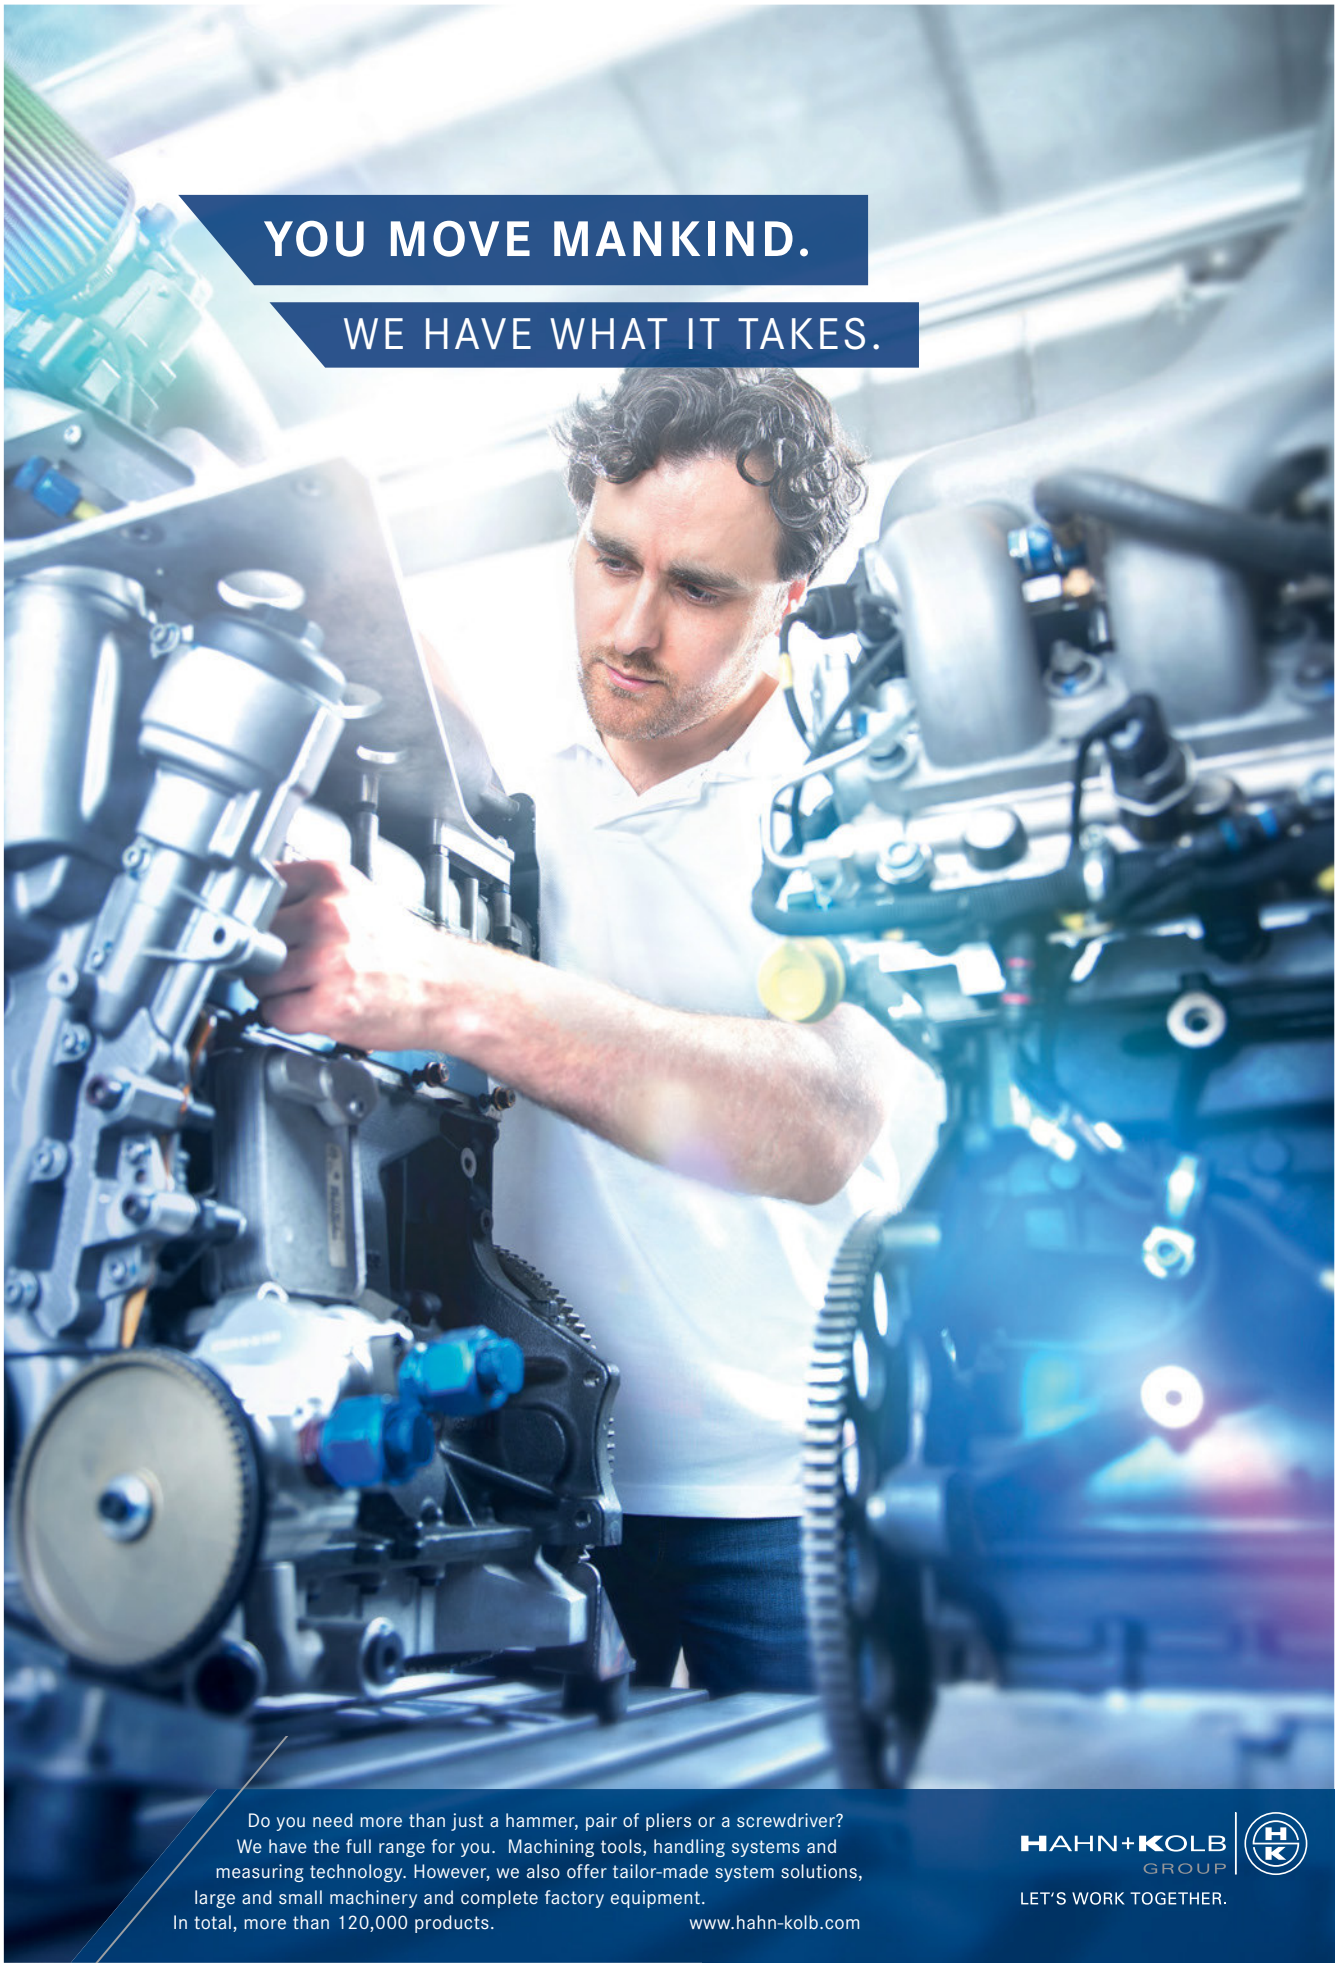


Reamer jams and breaks
- Misalignment between drill bit and reamer
- Feed too high
- Excessive reaming allowance
- Poor chip removal
- Circular grinding chamfer too wide
- Insufficient taper
- First cut incorrectly ground



Incorrect bore hole position
- Misalignment between drill bit and reamer
- Radial run-out of the spindle or tool
- If necessary, work with bottoming reamer

① Alignment offset



YOU MOVE MANKIND.
WE HAVE WHAT IT TAKES.
Do you need more than just a hammer, pair of pliers or a screwdriver?
We have the full range for you. Machining tools, handling systems and
measuring technology. However, we also offer tailor-made system solutions,
large and small machinery and complete factory equipment.
In total, more than 120,000 products.

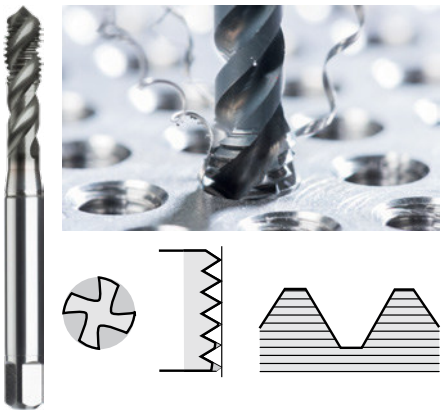
LET'S WORK TOGETHER.

Female thread creation: Screw tapping

When creating a thread by tapping, a core hole and counterbore must be made in the material. The screw tap carries out the cutting motion. Thus, the thread pitch determines the feed rate. Material is cut out and the chips are removed via flutes.

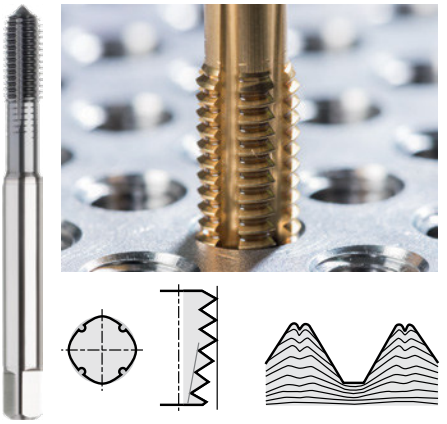


Advantages:
- high machining speed
- cost-effective tools
- simple tool handling and well-known procedure
- broad field of application
- use on simple machines possible
- regrindable tools

Disadvantages:
- clamping problems with very deep threads
- screw tap breakage with difficult materials
- average surface quality
- risk of axial cutting (taper)
- of the thread
- tapping chuck required

Female thread creation: Thread forming (thread tapping)

In contrast to tapping, where sections are cut out of the material, the process of thread forming does not involve cutting. The material is made to flow through the polygon shape of the thread former. The fibre pattern is not interrupted.

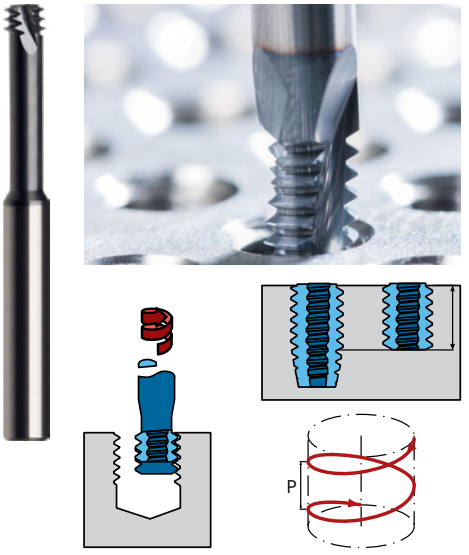


Advantages:
- Very high working speed and process reliability
- Very high surface quality
- One tool for through hole and blind hole
- No clamping problems
- Higher thread strength
- Tools are easier to use
- Long service life, less breakage
- Deep threads

Disadvantages:
- Higher torque
- Special pre-drilling diameter with tight tolerance
- Incomplete moulding of cores (claw)
- Minimum expansion of tool must be ensured
- Regrinding not possible
- Lubrication essential
- Where used in the food or medicine industries, there is a risk of germ build-up in the area of the moulding recess.

Female thread creation: Milling cutter

The development of computer-controlled machines has made the thread milling procedure another option for creating internal threads. The thread is produced by the helical diagonal immersion of a rotating tool. In the process, the axial movement of the tool during one revolution produces the pitch. A CNC machine with at least three axes is required (XYZ).



Advantages, tool cost minimisation:
- right-hand and left-hand thread can be manufactured with a tool
- thread milling cutters cover different threads with the same pitch
- for partial thread profiles, a wide range of threads can be produced with a cutting insert

Advantages, process reliability:
- Extremely high process reliability for very expensive components
- Reliable solution for problem materials with chip breaking issues and difficult chip formation
- First choice for thin-walled workpieces or unstable clamping
- High thread quality
- Thread can be produced down to the bottom of a blind hole
- Radius compensation programming enables thread tolerance to be adjusted easily

Disadvantages:
- Machine requirements (XYZ axes)
- In series production, usually longer machining times
- Limited experience of the user in thread milling

Thread production process at a glance

	Screw tapping	Thread forming	Milling cutter
Process reliability	o	+	++
Surface quality	o	++	+
Machining speed	+	++	o
Service life	o	++	+
Flexibility/universal use	o	+	++
Thread depth	o	++	++

o = limited suitability | + = well suited | ++ = very well suited

Tolerances for threads

standards ensure that male and female threads of the desired form fit together. depending on the application, the appropriate tolerance must be taken into account for the screw tap or thread former. in thread milling, the tolerance can be produced as desired using radius correction. the graphic shows the different tolerance classes and their use.

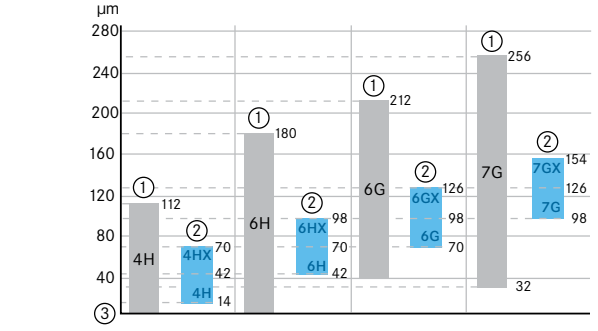
DIN EN 22857		Tolerance range of nut thread to be cut					DIN 802 part 1	Technical application
Application class of the screw tap							Tolerance class of the screw tap	
Name	Identification							
Class 1	ISO 1	4H	5H				4H	Screw connection with little play
Class 2	ISO 2			6H			6H	Standard screw connection
Class 3	ISO 3				6G		6G	Screw connection with a lot of play
–	–					7		As a preventive measure against warping in heat treatment

The graphic shows the position of the tolerance field of the nut thread in the different tolerance classes, e.g. 6H (marked in grey). The blue tolerance fields show the position of the tolerance field for the corresponding screw taps or thread formers.

It can be advantageous to produce screw taps and thread formers in a different tolerance class. This tolerance is indicated by an X after the tolerance class (e.g. 6HX instead of 6H). The X represents a manufacturer-specific tolerance and can differ between manufacturers.

Tough materials have recoiling properties. To counteract this effect, the X range is used in the ATORN thread cutting programme for these tough materials. Screw taps for titanium and nickel alloys, for example, are produced in the X range.

Where abrasive materials (those with friction or a grinding effect) are concerned, it also makes sense to produce tools in the X range. This results in a longer service life, because the screw taps are still within tolerance even having been subject to wear. The red ring screw tap for cast and short-chipping non-ferrous metals is produced in this tolerance range.



① Nut thread tolerance field ② Screw tap tolerance class ③ Tolerances

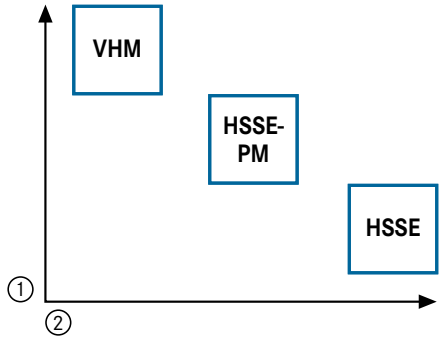
Cutting materials and cutting process during thread cutting

The following list of cutting materials is used for female thread machining in the screw tapping, thread moulding and thread milling processes. The graphic shows the toughness/breaking strength parameters in comparison to wear resistance/hardness.

SC — solid carbide
- Very high level of hardness
- Cutting material for applications up to 65 HRC
- Very high cutting speed, high precision

HSSE-PM — high speed steel, powder metal
- Cutting material for applications up to 1300 N/mm²
- Medium to high cutting speed
- High elasticity, high cutting speed

HSSE — high-speed steel
- Cutting material for applications up to 1300 N/mm²
- Low to medium cutting speeds
- 5% cobalt content
- Very high elasticity

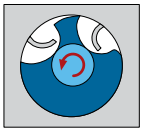


① Hardness/wear resistance/cutting speed
② Toughness/breakage resistance

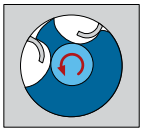
Screw tapping

Screw tapping produces extremely high torsional forces. Particularly when producing blind holes in long-chipping materials, the chips must be broken at the changeover point. The following procedure for blind hole tapping illustrates the relationship.

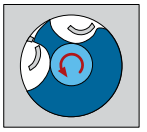
The thread is in the cutting process and guides the chips to the top.



after reaching the thread depth the switching process follows, in which the forces return to almost zero.



The chip must now be broken off through the back of the screw tap. The forces reach maximum level.



The chip is now broken off and the torque is drastically reduced.

For this reason, primarily HSSE and HSSE-PM cutting materials are used for screw taps. These cutting materials can work with all material groups except hardened materials. Solid carbide is only used as a cutting material in a few tapping applications.
If the material hardness is too high, such as in hardened material above 55 HRC, solid carbide must be used. However, solid carbide is also used as a cutting material with short-chipping materials, since torsion forces are low in these applications. The following graphic shows the various machining tasks and the appropriate cutting material for the application.

	Steel	Stainless steel	Cast metal	Non-ferrous metals	Special alloy	Hardened steels		
HSSE	ISO P	ISO M	ISO K	ISO N				HSSE-PM	ISO P	ISO M	ISO K	ISO N	ISO S			VHM			ISO K	ISO N		ISO H		

Coatings and surface treatments for tapping

Coatings form a protective layer between the workpiece and the cutting tool. Through the use of coatings and surface treatments, the following properties are achieved.

- Higher wear resistance
- Increased hardness
- Higher cutting speed and feed rate
- Corrosion protection
- Reduced friction
- Higher temperature resistance

We differentiate between the following coatings and surface treatments:

titanium nitride
universal layer for universal machining.
- Vickers hardness: 2200–2300 HV
- Friction coefficient: 0.5
- Temperature resistance: 500–600°C
- Colour: Gold

TiN

Titanium aluminium nitride
Universal layer for high-performance machining with high cutting speed.
- Vickers hardness: 3200 HV
- Friction coefficient of steel: 0.55
- Temperature resistance: 700-800°C
- Colour: Dark blue grey

TiAlN

Titanium carbon nitride
Its high level of hardness and excellent wear resistance make the TiCN layer suitable for machining difficult materials.
- Vickers hardness: 3500 HV
- Friction coefficient of steel: 0.2
- Temperature resistance: 400°C
- Colour: Blue grey (anthracite)

TiCN

ULTRA HL
This modern layer has been specially developed for thread machining and is currently the highest-performing layer due to being extremely smooth and very heat resistant while at the same time exhibiting low thermal conductivity. Particularly in processing stainless steel.
- Vickers hardness: 3000 HV
- Friction coefficient of steel: 0.15–0.20
- Temperature resistance: 800°C
- Colour: Dark grey

ULTRA HL

CARBO

A new type of special coating for high-performance machining of non-ferrous metals (aluminium alloys, wrought alloys), which are characterised by good emergency running properties and low edge build-up formation.

- Vickers hardness: 6000 HV
- Friction coefficient: 0.1
- Temperature resistance: 700°C
- Colour: Black

Vaporisation

This is a chemical surface treatment rather than a classic coating.

This steam treatment ensures that the lubricating film on the screw tap surface does not tear off during tapping.

Thread types and thread depths when tapping

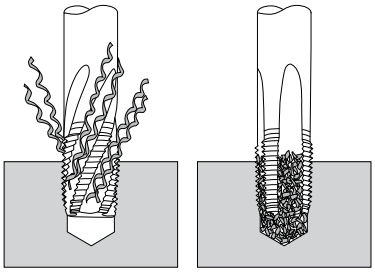
In thread machining, we distinguish between through holes and blind holes. The blind hole places the most demands on a screw tap, as the chips in long-chipping materials have to be transported upwards out of the hole and must be broken at the changeover point. As a result, spiralised screw taps must be used with long-chipping materials.

A spiralised design is not necessary with short-chipping materials, as the short chips fall into the blind hole and are rinsed out by the coolant.

As a rule, a thread depth of 3xD can be achieved in blind hole machining, depending on the material. maximum process reliability is achieved but with thread depths up to 2.5xD.

Through holes can be made with thread depths of up to 4xD. Here too, for process reliability can be expected for 3xD.

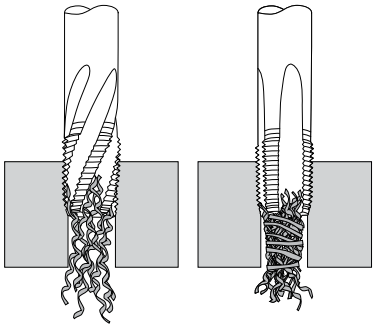
The through hole is a relatively non-critical process, as the chips are removed in the direction of feed. The chips are removed either through a spiral point or a left-hand spiral. Screw taps designed for both blind and through holes are another consideration. However, these only work with short-chipping materials or very low thread depths.



Blind hole machining with spiralised screw tap in long-chipping materials

Blind hole machining with straight-grooved screw tap in short-chipping materials

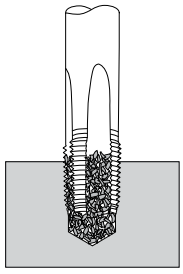
Max. thread depth 2.5xD of blind hole
(e.g. M6 = max. thread depth 15 mm)



Through-hole machining with left-hand spiralised screw tap in long-chipping materials

Through-hole machining with spiral point in long-chipping materials

Max. thread depth 3xD of blind hole
(e.g. M6 = max. thread depth 18 mm)



Blind hole and through-hole machining with straight-grooved screw tap

Blind and through-hole machining with straight-grooved screw tap
(e.g. M6 = max. thread depth 15 mm)

Screw tapping designs

We distinguish between two fundamental designs for screw tapping. DIN 371 with reinforced shank well as DIN 376 and DIN 374 with continuous shank.

DIN 371 reinforced shank

DIN 376 and DIN 374 straight shank

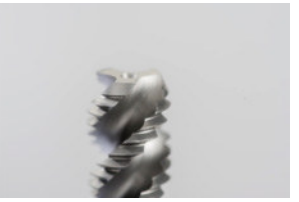
Cutting point shapes and their function

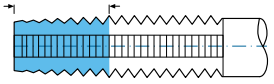
on a screw tap, the point plays an important role in the thread cutting process and is decisive when it comes to service life and thread quality.

We distinguish between the following five point shapes. Apart from point shape B with a spiral point, which is only a straight-grooved shape, all other point shapes can be combined with the different chip flutes.

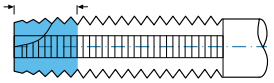
In principle: Longer points mean a longer service life. This a particular advantage at high quantities. However, the required torque also increases, producing higher forces. Short point shapes enable the thread to be cut nearly to the base of the hole.

Common point shapes are B, C and E.

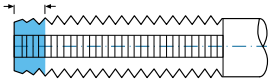




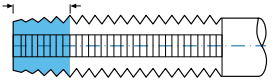
Long, 6–8 turns
for short through holes



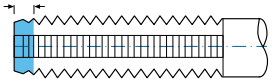
Medium, 3.5–5.5 turns
with spiral point, for all through holes and large thread depths in medium- and long-chipping materials



Short, 2–3 turns
for blind holes and generally for aluminium, grey cast iron and brass



Medium, 3.5–5 turns
for short through holes



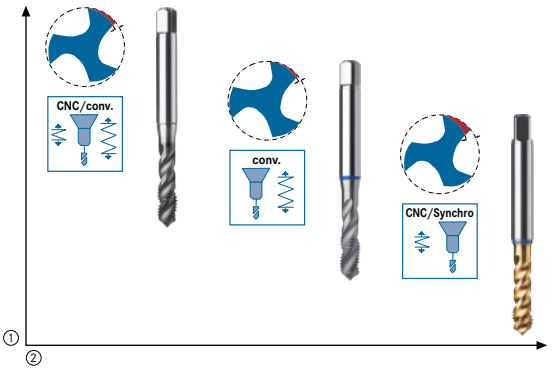
Extremely short, 1.5–2 turns
for blind holes with a very short thread run-out; avoid if possible

Usage conditions and clearance angle

The size of the clearance angle has an effect on the service life and guiding properties of the screw tap.

A large clearance angle minimises friction and increases the service life; a smaller clearance angle improves the guidance of the screw tap.

In principle, spiralised screw taps for blind holes have a smaller clearance angle than straight-grooved screw taps. If the clearance angle were too large, the chips would jam during the reverse motion, leading to breakage of the screw tap.



① guiding properties ② service life

CNC/conventional

These screw tap types are designed for both conventional and CNC machines, and they represent a compromise between the ideal guidance and an increase in the service life through increasing the clearance angle.

This mixed type is the most common and the best solution for the majority of machining tasks.

By moderate machining conditions, we mean e.g. cutting of threads on a CNC machine in a length compensation chuck or a synchronous chuck. With this machine tap type, for example, a thread can also be cut on a conventional drill with a length compensation chuck.

Conventional use

These threaded drill types are suitable for conventional machining in the small and medium quantity range in unstable clamping conditions. Its very long guide part and the low clearance angle make these screw taps ideal in unstable machining conditions on old machines with a standard length compensation chuck or cutting by hand.

CNC/synchro

In comparison with the conventional CNC types, these screw taps are characterised by a minimal guide part and a very large clearance angle. Their very free geometry ensures a long service life in the medium to high quantity range. However, correct tool clamping must be ensured

in the synchronous chuck or as a rigidly clamped tool. In addition, the thread must be created on a synchronous CNC machine with low play. These screw taps are all equipped with an H6 shank in order that they can be clamped rigidly in a surface chuck or shrink-fit chuck.

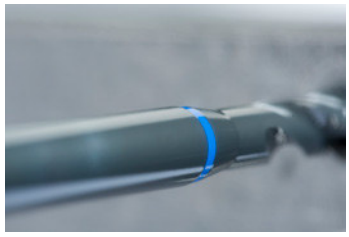
Clamping device recommendation for screw taps

	Length compensation chucks	Synchronous tapping chucks	Collet chucks	Shrink-fit chucks	Hydro-expansion chucks	Surface chucks
Length compensation range	9-15 mm	0.5-1 mm	0	0	0	0
Suitable for usage conditions	Unstable	Unstable-stable (synchronous)	Stable (synchronous)	Stable (synchronous)	Stable (synchronous)	Stable (synchronous)
Suitable for conventional machines	◉	○	○	○	○	○
Suitable for CNC machines	○	●	◉	◉	◉	◉
Suitable for conventional screw taps (low relief grinding) 	◉	○	○	○	○	○
Suitable for standard screw taps (medium relief grinding) 	○	◉	◉	◉	◉	◉
Suitable for synchronous screw taps (high relief grinding) 		●	◉	◉	◉	◉

● = very well suited ◉ = suitable ○ = limited suitability

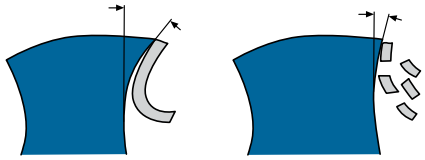
Screw tap colour ring system

With the screw tap colour ring system, users can find the right screw tap for their task quickly and reliably. Each colour ring represents an ideal clamping geometry for the material to be processed. The colour system is based on the ISO code for indexable inserts and therefore can be understood worldwide. Extremely universal tools do not have a ring. The various geometries and their purposes are illustrated in the graphic below.



UNI MAX	UNI < 1000 N/mm²	UNI < 1000 N/mm²	High-strength > 1000 N/mm²	non-ferrous metals	stainless steel	cast and short-chipping non-ferrous metals	titanium and nickel alloy	hard

each material has its specific characteristics and needs individual chip geometries. this means that the chip angle, clearance angle and guide length must be set to achieve an optimal result. stainless steels and steels need positive cutting to reliably penetrate the material and safely remove the chips. for processing very hard materials, the cutter must be as stable as possible.



Screw tap UNI MAX 45HL Control
for universal use up to 1,200 N/mm²

UNI MAX 45HL Control

ATORN Machine tap HSSE-PM Ultra HL
For universal use in series production, up to 1,200 N/mm²

M | ≤3xd | ≤2,5xd | HSSE | ULTRA HL | ISO 2 x | C (2-3) | B (3,5-5) | CNC/conv.

No. 13250

No. 13252

UNI MAX 45HL Control

Application:

No. 13250: For producing metric threads on CNC machines or conventional machines in **through holes** in steel, stainless steel, non-ferrous metals, cast iron and special alloys up to 1200 N/mm².

No. 13252: For producing metric threads on CNC machines or conventional machines in **blind holes** in steel, stainless steel, non-ferrous metals, cast iron and special alloys up to 1200 N/mm².

Advantage:

- ideal for long service life requirements and materials that are difficult to machine, such as stainless steel
- Innovative cutting geometry and ULTRA HL coating guarantee high process reliability even under difficult machining conditions

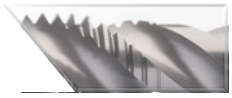
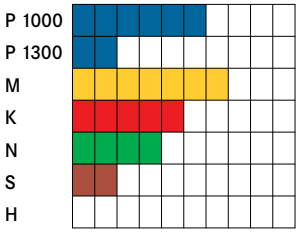
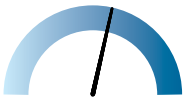
UNI MAX 45 Control screw tap
For universal use up to 1100 N/mm²

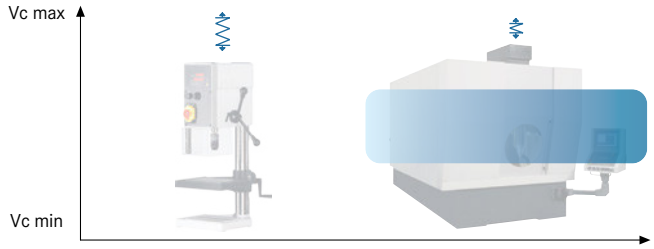


Performance:





Conditions of use:



UNI MAX 45 Control

ATORN Machine tap HSSE, vaporised
For universal use in series production, up to 1,200 N/mm²

No. 13067

No. 13078

UNI MAX 45HL Control

Application:

No. 13067: For producing metric threads on CNC machines or conventional machines in **through holes** in steel, stainless steel, non-ferrous metals, cast iron and special alloys up to 1200 N/mm².

No. 13078: For producing metric threads on CNC machines or conventional machines in **blind holes** in steel, stainless steel, non-ferrous metals, cast iron and special alloys up to 1200 N/mm².

Advantage:

- Ideal for long service life requirements and materials that are difficult to machine, such as stainless steel
- Innovative cutting geometry ensures high process reliability even under difficult machining conditions

p. 211 p. 215 p. 24 p. 849 p. 339

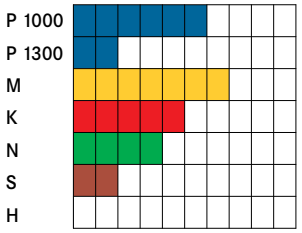
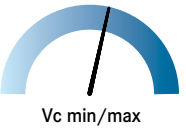
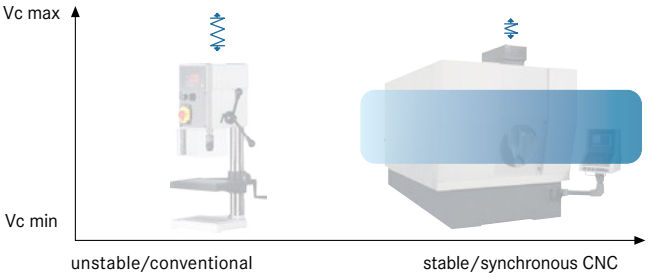
UNI MAX 40 + 45 Control screw tap
for universal use up to 1,000 N/mm²

Performance:





Conditions of use:



ATORN Machine tap HSSE V3
for universal use up to 1,200 N/mm2

Application:

No. 13217: For producing metric threads on CNC machines or conventional machines in **through holes** in the steel, stainless steel, non-ferrous metals, cast and special alloys material groups up to a strength of 1200 N/mm².

No. 13218: For producing metric threads on CNC machines or conventional machines in **blind holes** in the steel, stainless steel, non-ferrous metals and cast material groups up to a strength of 1200 N/mm²

Advantage:

- **No. 13217 020–13218 100:**
  - Universal use for maximum flexibility of application
  - Innovative cutter geometry ensures high process reliability even in difficult machining conditions
- **No. 13218 520–13218 960:**
  - Universal use for maximum flexibility
  - Innovative cutting geometry ensures high process reliability even under difficult machining conditions

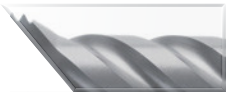
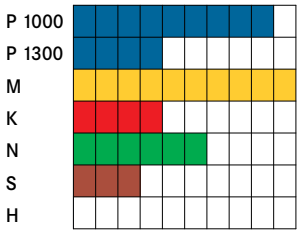
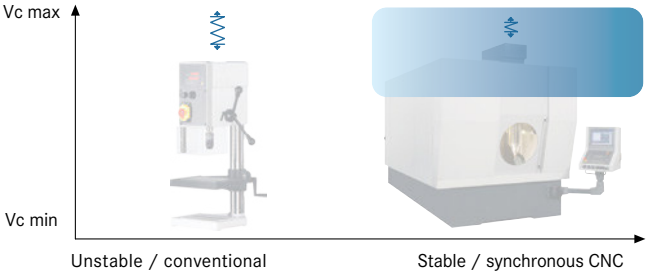
Screw tap UNI MAX 50HL Speed
For universal heavy-duty applications up to 1200 N/mm² in series production



Performance:



Conditions of use:



UNI MAX 50HL Speed — Vc min/max

ATORN Machine tap HSSE-PM Ultra HL
For universal use in series production, up to 1,200 N/mm²

M | ≤3xd | ≤2,5xd | HSSE-PM | ULTRA HL | ISO 2 x | ISO 3 x | B (3,5-5) | C (2-3) | CNC/conv.

No. 13201

No. 13202

UNI MAX 50HL Speed — Vc min/max

Application:

No. 13201 020–13201 300: For manufacturing metric threads on CNC or conventional machines in **through holes** in steel, stainless steel, non-ferrous metal, cast iron and special alloy material groups up to -1200 N/mm².

No. 13201 730–13201 900: For producing metric threads on CNC machines or conventional machines in **through holes** in the steel, stainless steel, non-ferrous metals, cast and special alloys material groups up to a strength of 1200 N/mm².

No. 13202 020–13202 300: For manufacturing metric threads in **blind holes** on CNC or conventional machines in the steel, stainless steel, non-ferrous metal and cast iron material groups up to -1200 N/mm²

No. 13202 730–13202 900: For producing metric threads on CNC machines or conventional machines in **blind holes** in the steel, stainless steel, non-ferrous metals and cast material groups up to a strength of 1200 N/mm²

Advantage:

- Innovative cutter geometry ensures high process reliability even in difficult machining conditions
- **No. 13201 020–13201 300, 13202 020–13202 300:** Universal application for maximum flexibility
- **No. 13201 730–13201 900, 13202 730–13202 900:** Universal use for maximum flexibility of application

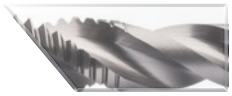
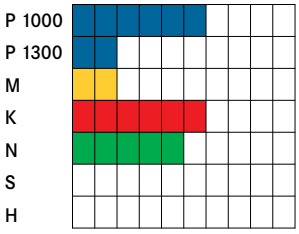
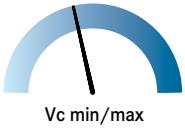
UNI 40 Control screw tap, black ring
for universal use up to 1,000 N/mm²

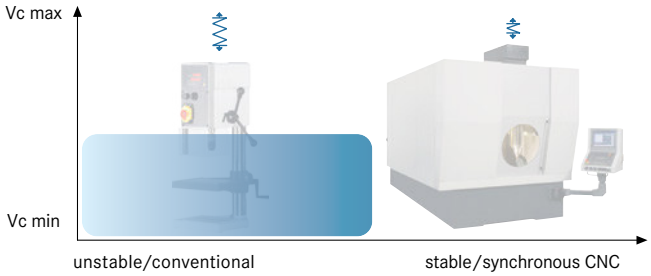


Performance:





Conditions of use:



UNI 40 Control — Vc min/max

ATORN HSSE machine tap
For universal use up to 1,000 N/mm²

M | ≤3xd | ≤2,5xd | HSSE | TiN | ISO 2 | B (3,5-5) | C (2-3) | CNC/conv.

Application:

No. 13121: For producing metric threads on CNC machines or conventional machines in **through holes** in the steel, stainless steel, non-ferrous metals and cast iron material groups up to a strength of 1000 N/mm².

No. 13125: For producing metric threads on CNC machines or conventional machines in **blind holes** in the steel, stainless steel, non-ferrous metals and cast iron material groups up to a strength of 1000 N/mm²

Execution:

- Structural dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = over-long shank (from M12)

Advantage:

- Universal use for maximum flexibility in use
- Innovative cutter geometry ensures high process reliability even in difficult machining conditions

Notes:

ATORN HSSE machine tap, extra long

For universal use up to 1,000 N/mm²

M | ≤3xd | ≤2,5xd | HSSE | ISO 2 | B (3,5-5) | C (2-3) | CNC/conv.

No. 13121

No. 13125

Application:

No. 13121: For producing metric threads on CNC machines or conventional machines in **through holes** in the steel, stainless steel, non-ferrous metals and cast iron material groups up to a strength of 1000 N/mm².

No. 13125: For producing metric threads on CNC machines or conventional machines in **blind holes** in the steel, stainless steel, non-ferrous metals and cast material groups up to a strength of 1000 N/mm².

Advantage:

- Universal use for maximum flexibility
- Innovative cutting geometry ensures high process reliability even under difficult machining conditions

ATORN HSSE/HSSE-PM ULTRA HL machine tap

For universal use up to 1,000 N/mm²

M | ≤3xd | ≤2,5xd | HSSE-PM | HSSE | ULTRA HL | ISO 2 | B (3,5-5) | C (2-3) | CNC/conv.

No. 13049 430–13049 600, 13050 730–13050 900

No. 13049 030–13049 200, 13050 330–13050 500

UNI 40 Control — Vc min/max

p. 211 p. 215 p. 24 p. 849 p. 339

Application:

No. 13049 030–13049 200, 13050 330–13050 500: For producing metric threads on CNC machines or conventional machines in **blind holes** in the steel, stainless steel, non-ferrous metals and cast iron material groups up to a strength of 1000 N/mm²

No. 13049 430–13049 600: For producing metric threads on CNC machines or conventional machines in **through holes** in the steel, stainless steel, non-ferrous metals and cast iron material groups up to a strength of 1000 N/mm².

No. 13050 730–13050 800: For producing metric threads on CNC machines or conventional machines in **through holes** in the steel, stainless steel, non-ferrous metals and cast iron material groups up to a strength of 1,200 N/mm².

No. 13050 820–13050 900: For producing metric threads on CNC machines or conventional machines in **through holes** in the steel, stainless steel, non-ferrous metals and cast iron material groups up to a strength of 1200 N/mm².

Execution:

- **No. 13049 030–13050 800:** Structural dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = over-long shank (from M12)
- **No. 13050 820–13050 900:** Structural dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = protruding shank (from M12)

Advantage:

- Innovative cutter geometry and newly developed ULTRA HL coating ensures high process reliability even in difficult machining conditions

ATORN Machine tap, HSSE, oversize

For universal use up to 1,000 N/mm²

No. 13043

No. 13051

p. 211 p. 215 p. 24 p. 849 p. 339

Application:

No. 13043: For producing metric threads on CNC machines or conventional machines in **through holes** in the steel, stainless steel, non-ferrous metals and cast iron material groups up to a strength of 1000 N/mm²

No. 13051: For producing metric threads on CNC machines or conventional machines in **blind holes** in the steel, stainless steel, non-ferrous metals and cast iron material groups up to a strength of 1000 N/mm²

Execution:

- Structural dimensions according to: DIN 371 = reinforced shank (to M10), DIN 376 = protruding shank (from M12)

Advantage:

- **No. 13043:**
  - Universal use for maximum flexibility
  - Innovative cutting geometry ensures high process reliability even under difficult machining conditions

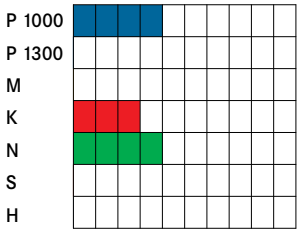
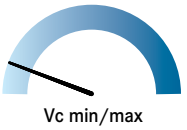
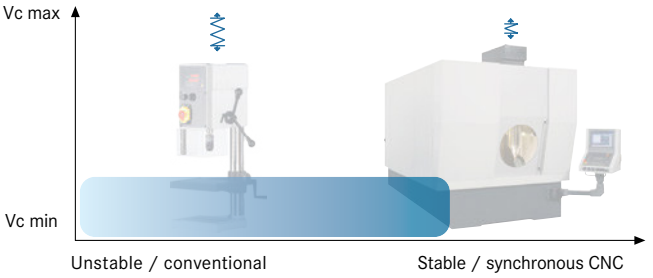
Screw tap P Max 1000 Control
For universal use up to 1000 N/mm²

Performance:





Conditions of use:



ATORN ORION® HSS machine tap, short (DIN 352)
For universal conventional use up to 1,000 N/mm²

Application:
For producing metric threads on CNC machines or conventional machines and by hand in **through holes** in the steel, (stainless steel), non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

Execution:
- Machine tap, short design

Advantage:
- Easy accessibility thanks to short design

HSSE machine tap

For universal conventional use up to 1,000 N/mm²

Application:

For producing metric threads on conventional machines in **blind holes and through holes** in the steel, (stainless steel), non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

Execution:

- **No. 13270:** Structural dimensions according to: DIN 371 = reinforced shank (up to M10), DIN 376 = protruding shank (from M12)
- **No. 13323:** Dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = transition-fit shank (from M12)

Advantage:

- **No. 13270:** Long service life and good process reliability due to innovative cutting geometry and universal use for maximum application versatility
- **No. 13323:** Long service life and high process reliability thanks to innovative cutting geometry, and universal use for maximum flexibility in use.

ORION ATORN HSSE machine tap

For universal conventional use up to 1,000 N/mm²

M | ≤3xd | ≤2,5xd | HSSE | ISO 2 | B (3,5-5) | C (2-3) | conv.

No. 13105–13106

No. 13267–13268

P 1000 Control

Vc min/max

p. 211 p. 215 p. 24 p. 849 p. 339

Application:

No. 13105: For producing metric threads in the through hole on conventional machines for the material groups of steel (stainless steel), non-ferrous metals and (cast iron) up to a strength of 1000 N/mm².

No. 13106: For producing metric threads on conventional machines in **through holes** in the steel, (stainless steel), non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

No. 13267: For producing metric threads on conventional machines in **blind holes** in the steel, (stainless steel), non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

No. 13268: For cutting metric threads in blind holes on conventional machines in the material groups steel, (stainless steel), non-ferrous metals and (cast materials) up to a strength of 1000 N/mm².

Execution:

- **No. 13105–13106:** structural dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = over-long shank (from M12)
- **No. 13267–13268:** Structural dimensions according to: DIN 371 = reinforced shank (up to M10), DIN 376 = protruding shank (from M12)

Advantage:

- **No. 13105:** standard geometry with excellent price/performance ratio
- **No. 13106:** good service life and process reliability thanks to innovative cutting geometry and universal use for the greatest flexibility in applications
- **No. 13267:** Long service life and good process reliability due to innovative cutting geometry and universal use for maximum application versatility
- **No. 13268:** Standard geometry with very good price/performance ratio

ATORN HSSE machine tap (DIN 376)

For universal conventional use up to 1,000 N/mm²

M | ≤3xd | ≤2,5xd | HSSE | ISO 2 | B (3,5-5) | C (2-3) | conv.

No. 13101

No. 13326

p. 211 p. 215 p. 24 p. 849 p. 339

Application:

No. 13101: For producing metric threads on conventional machines in **through holes** in the steel, (stainless steel), non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

No. 13326: For producing metric threads on conventional machines in **blind holes** in the steel, (stainless steel), non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

Execution:

- **No. 13101:** With protruding shank
- **No. 13326:** With transition-fit shank

Advantage:

- **No. 13101:** Long service life and high level of process reliability thanks to innovative cutting geometry and universal application for maximum flexibility in use
- **No. 13326:** Long service life and high process reliability thanks to innovative cutting geometry, and universal use for maximum flexibility in use.

ATORN HSSE TiN machine tap

For universal use up to 1,000 N/mm²

Application:

No. 13115: For producing metric threads on CNC machines or conventional machines in **through holes** in the steel, (stainless steel), non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

No. 13269–13307: For producing metric threads on CNC machines or conventional machines in **blind holes** in the steel, (stainless steel), non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

Execution:

- **No. 13115 030–13115 640, 13307 030–13307 200:** structural dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = over-long shank (from M12)
- **No. 13269:** Structural dimensions according to: DIN 371 = reinforced shank (up to M10), DIN 376 = protruding shank (from M12)

Advantage:

- **No. 13115 030–13115 100:** good service life and process reliability thanks to innovative cutting geometry and universal use for the greatest flexibility in applications
- **No. 13115 120–13115 640:** good service life and process reliability thanks to innovative cutting geometry and coating as well as universal use for the greatest flexibility in applications
- **No. 13269:** Long service life and good process reliability due to innovative cutting geometry and universal use for maximum application versatility
- **No. 13307:** Long service life and high level of process reliability thanks to innovative cutter geometry and coating and universal application for maximum flexibility in use

ORION ATORN Vaporised HSSE machine tap (DIN 376)

For universal use up to 1,000 N/mm²

M | ≤3xd | ≤2,5xd | HSSE | ISO 2 | B (3,5-5) | C (2-3) | CNC/conv.

No. 13117–13119

No. 13283–13321

P MAX 1000 Control | Vc min/max

p. 211 p. 215 p. 24 p. 849 p. 339

Application:

No. 13117–13119: For producing metric threads on CNC machines or conventional machines in **through holes** in the steel, (stainless steel), non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

No. 13283–13321: For producing metric threads on CNC machines or conventional machines in **blind holes** in the steel, (stainless steel), non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

Execution:

- **No. 13117 020–13117 360, 13283 030–13283 360:** with over-long shank
- **No. 13119:** With protruding shank
- **No. 13321:** With transition-fit shank

Advantage:

- **No. 13117 020–13117 360, 13283 030–13283 360:** good service life and process reliability thanks to innovative cutting geometry and universal use for the greatest flexibility in applications
- **No. 13119 106–13119 300, 13321 030–13321 300:** Standard geometry with very good price/performance ratio

HSSE TiN left-hand machine tap

For universal use up to 1,000 N/mm²

M-L | ≤3xd | HSSE | TiN | ISO 2 | B (3,5-5) | CNC/conv.

Application:

For producing metric threads on CNC machines or conventional machines in **through holes** in the steel, (stainless steel), non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

Execution:

- structural dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = over-long shank (from M12)

Advantage:

- good service life and process reliability thanks to innovative cutting geometry and coating as well as universal use for the greatest flexibility in applications

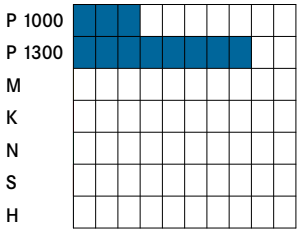
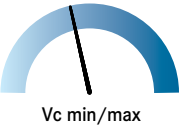
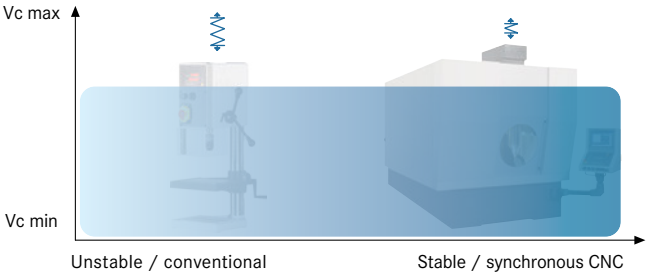
Screw tap P Max 1300
For universal use up to 1300 N/mm²

Performance:





Conditions of use:



ORION ATORN HSSE machine tap
For use in high-strength steel up to 1,300 N/mm²

No. 13130–13149

No. 13306

No. 13319

Application:

No. 13130–13149: For producing metric threads on CNC machines or conventional machines in **through holes** in the high-strength steel material group up to a strength of 1300 N/mm².

No. 13306–13319: For producing metric threads on CNC machines or conventional machines in **blind holes** in the high-strength steel material group up to a strength of 1300 N/mm².

Execution:

- **No. 13130:** Dimensions to: DIN 371 = reinforced shank (to M10), DIN 376 = protruding shank (from M12)
- **No. 13149 030–13149 120, 13319 030–13319 120:** Dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = transition-fit shank (from M12)
- **No. 13306:** structural dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = over-long shank (from M12)

Advantage:

- **No. 13130:** Long service life and process reliability through innovative cutting geometry for use in high-strength steel
- **No. 13149 030–13149 120, 13319 030–13319 120:** Standard geometry with an excellent price-performance ratio
- **No. 13306:** good service life and process reliability thanks to innovative cutting geometry and coating for use in high-strength steel

ATORN Vaporised HSSE machine tap (DIN 376)

For use in high-strength steel up to 1,300 N/mm²

Application:

For producing metric threads on CNC machines or conventional machines in **blind holes** in the high-strength steel material group up to a strength of 1300 N/mm² in individual part and series production.

Execution:

- With protruding shank

Advantage:

- good service life and process reliability thanks to innovative cutting geometry and coating for use in high-strength steel

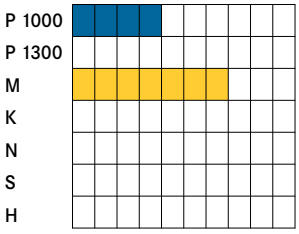
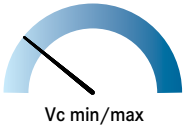
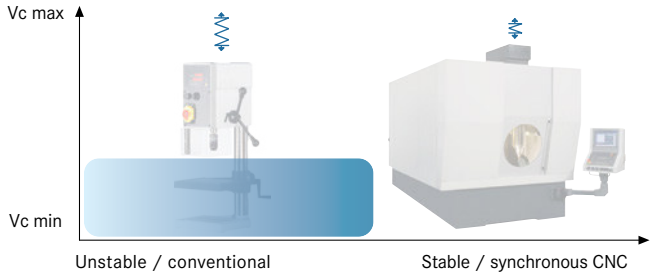
Screw tap M MAX 40 Control
For use on stainless steel

Performance:





Conditions of use:



ATORN ORION® Vaporised HSSE machine tap
For use on stainless steels

Application:

No. 13136–13145: For producing metric threads on CNC or conventional machines in **through holes** in the stainless steel material group.

No. 13279–13288: For producing metric threads on CNC machines or conventional machines in **blind holes** in the stainless steel material group.

Execution:

- **No. 13136:** Dimensions to: DIN 371 = reinforced shank (to M10), DIN 376 = protruding shank (from M12)
- **No. 13145:** Dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = transition-fit shank (from M12)
- **No. 13279:** Structural dimensions according to: DIN 371 = reinforced shank (up to M10), DIN 376 = protruding shank (from M12)
- **No. 13288:** structural dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = over-long shank (from M12)

Advantage:

- **No. 13136:** Long service life and process reliability through innovative cutting geometry in machining stainless steel
- **No. 13145 120–13145 240:** Standard geometry with an excellent price-performance ratio
- **No. 13279:** Standard geometry with very good price/performance ratio
- **No. 13288:** long service life and high process reliability thanks to innovative cutting geometry for machining stainless steel

ATORN HSSE TiN machine tap

For use on stainless steels

No. 13107

No. 13277

p. 211 p. 215 p. 40 p. 849 p. 339

Application:

No. 13107: For producing metric threads on CNC or conventional machines in **through holes** in the stainless steel material group.

No. 13277: For producing metric threads on CNC machines or conventional machines in **blind holes** in the stainless steel material group.

Execution:

- **No. 13107:** structural dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = over-long shank (from M12)
- **No. 13277:** Structural dimensions according to: DIN 371 = reinforced shank (up to M10), DIN 376 = protruding shank (from M12)

Advantage:

- **No. 13107:** long service life and high process reliability thanks to innovative cutting geometry for machining stainless steel
- **No. 13277:** Long service life and good process reliability due to innovative cutting geometry when machining stainless steel

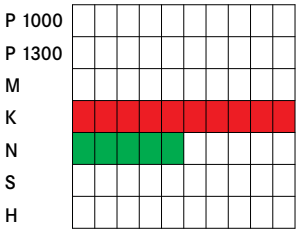
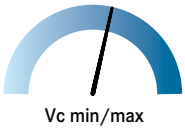
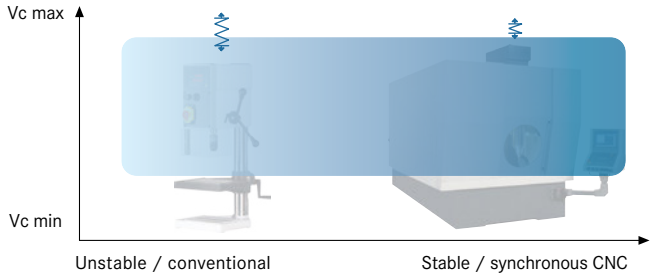
Screw tap K max Control
For use in cast iron and short-chipping non-ferrous metals

Performance:





Conditions of use:



ATORN HSSE machine tap
For use in cast iron and short-chipping, non-ferrous metals

Application:
For producing metric threads on CNC or conventional machines in **through holes and blind holes** in the non-ferrous metals (short-chipping) and cast iron material groups.

Execution:
- structural dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = overlong shank (from M12)

Advantage:
- long service life and high degree of process reliability thanks to innovative cutting geometry for machining cast iron and short-chip non-ferrous metals
- **No. 13291:** optimum chip removal thanks to inner cooling

No. 13290

No. 13291
High-efficiency HSSE-PM tap with internal cooling ensures secure chip removal and outstanding service life

p. 211 p. 215 p. 24 p. 849 p. 339

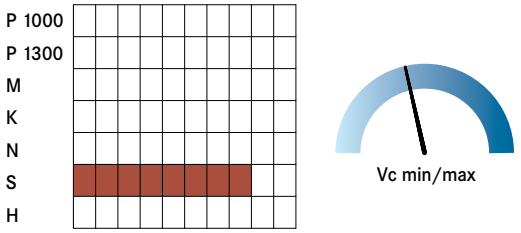
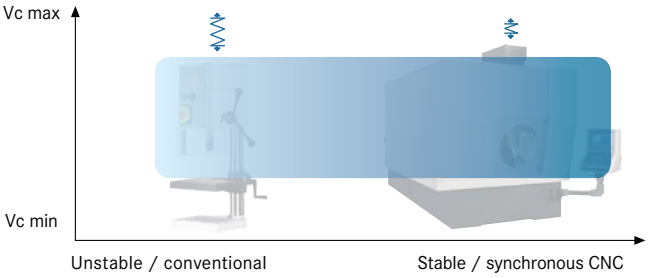
Screw tap S max Control
For use in titanium and nickel alloys

Performance:



Conditions of use:



ATORN HSSE-PM machine tap
For use in titanium and nickel alloys up to 1,000 N/mm²

Application:

No. 13134: For producing metric threads on CNC machines or conventional machines in **through holes** in the titanium and nickel alloy material group **up to 1000 N/mm²**.

No. 13286–13287: For producing metric threads on CNC machines or conventional machines in **blind holes** in the titanium and nickel alloy material group **up to 1000 N/mm²**.

Execution:

- **No. 13134:** Dimensions to: DIN 371 = reinforced shank (to M10), DIN 376 = protruding shank (from M12)
- **No. 13286–13287:** structural dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = over-long shank (from M12)

Advantage:

- **No. 13134:** Long service life and process reliability through innovative cutting geometry and coating for use in titanium-and-nickel alloys
- **No. 13286–13287:** good service life and process reliability thanks to innovative cutting geometry and coating for use in titanium and nickel alloys

ATORN HSSE PM Carbo machine tap

For use on non-ferrous metals

M | ≤3xd | ≤2,5xd | HSSE-PM | CARBO | ISO 2 | B (3,5-5) | C (2-3) | CNC/conv.

No. 13345

No. 13349

N MAX Control | Vc min/max

p. 211 p. 215 p. 24 p. 849 p. 339

Application:

No. 13345: For producing metric threads on CNC or conventional machines in **through holes** in the non-ferrous metals material group.

No. 13349: For producing metric threads on CNC or conventional machines in **blind holes** in the non-ferrous metals material group.

Execution:

- Dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = transition-fit shank (from M12)

Advantage:

- Specialised use with optimised chip geometry for use in NF metals.
- **No. 13345 030–13349 100:** Innovative carbo coating for very good gliding properties and emergency operating function if coolant supply is interrupted.
- **No. 13349 120–13349 240:** Innovative carbo coating for very good sliding properties and emergency operating function if coolant supply is interrupted.

ATORN HSSE machine taps with interrupted teeth

For use on non-ferrous metals

No. 13083

No. 13254

p. 211 p. 215 p. 24 p. 849 p. 339

Application:

No. 13083 030–13083 160, 13254 120–13254 200: For producing metric threads on CNC or conventional machines in **through holes** in the non-ferrous metals material group.

No. 13254 030–13254 100: For producing metric threads on CNC or conventional machines in **blind holes** in the non-ferrous metals material group.

Execution:

- **No. 13083:** Dimensions pursuant to: DIN 371 = reinforced shank (up to M10), DIN 376 = transition-fit shank (from M12)
- **No. 13254:** structural dimensions in accordance with: DIN 371 = reinforced shank (up to M10), DIN 376 = over-long shank (from M12)

Advantage:

- **No. 13083:**
  - Innovative cutting geometry with exposed teeth reduces the torque, improves lubricant distribution and ensures very high process reliability and chip removal
  - Specialised insert with optimised chipping geometry for use in NF metals with adhesive or lubricating properties
- **No. 13254:**
  - innovative cutting geometry with interrupted thread reduces torque, improves lubricant distribution and ensures extremely good process reliability and chip removal
  - specialised application with optimised chip geometry, for use in non-ferrous metals with adhesive or lubricating properties

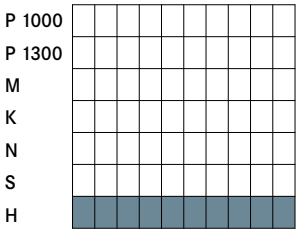
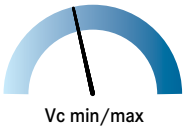
Prod. Gr. 1KA

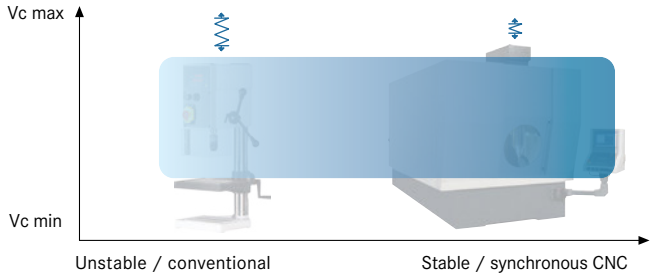
Screw tap H max Control
For use in hard machining from 55-65 HRC

Performance:





Conditions of use:



ATORN HSSE-PM and SC TiCN machine taps
For machining from 55 HRC-63 HRC

Application:
For producing metric threads on CNC machines in **through holes and blind holes** in the hardened steel material group **up to 63 HRC**.

Execution:
- with reinforced shank

Advantage:
- good service life and process reliability thanks to innovative cutting geometry and coating for machining hardened steel

No. 13251

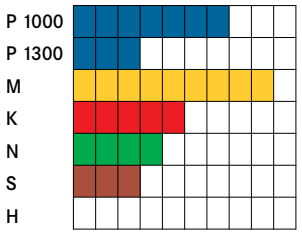
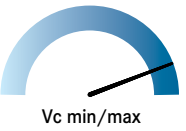
Screw tap and drill tap for hand-held power tools
for universal use on hand-held power tools

Performance:





Use:

ATORN HSSE screw tap with polygon shank for use in cordless drill drivers and drills
For universal use up to 1,100 N/mm²

M | ≤3xd | HSSE | B (3,5-5) | C (2-3)

Application:
Specially designed for thread cutting in manual operation with high service life requirements.

Advantage:
- Suitable for universal use with polygon shanks in cordless drills, drills or tapping chucks. Full power transmission

No. 13101

No. 13102

ATORN Drill-and-tap combination tool with polygon shank
For universal use up to 1,100 N/mm²

M | HSSE

Application:
Specially developed to allow drilling and thread cutting in a single operation in applications requiring a long service life.

Advantage:
- Suitable for universal use with polygon shanks in cordless drills, drills or tapping chucks. Full power transmission
- Innovative rake ensures high process reliability even under difficult machining conditions

ATORN Machine tap, HSSE Ultra HL (DIN 374)

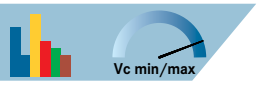
For universal use up to 1,000 N/mm²

MF | ≤3xd | ≤2,5xd | HSSE | ULTRA HL | ISO 2 | B (3,5-5) | C (2-3) | CNC/conv.

No. 13103

No. 13315

UNI MAX 45HL Control



p. 211 p. 215 p. 24 p. 849 p. 339

Application:

No. 13103: For producing fine metric threads on CNC machines or conventional machines in **through holes** in the steel, stainless steel, non-ferrous metals, cast iron and special alloy material groups up to a strength of 1000 N/mm².

No. 13315: For producing fine metric threads on CNC machines or conventional machines in **blind holes** in the steel, stainless steel, non-ferrous metals, cast iron and special alloy material groups up to a strength of 1000 N/mm².

Execution:

- With transition-fit shank

Advantage:

- Ideal for long service life requirements and materials that are difficult to machine, such as stainless steel
- Innovative cutting geometry and ULTRA HL coating guarantee high process reliability even under difficult machining conditions

ATORN HSSE machine tap (DIN 374)

for universal use up to 1,000 N/mm2

MF | ≤2xd | HSSE | ISO 2 | C (2-3) | CNC/conv.

Application:

For producing fine metric threads on CNC machines or conventional machines in **through holes and blind holes** in the steel, (stainless steel), non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

Execution:

- With transition-fit shank

Advantage:

- Long service life and high process reliability thanks to innovative cutting geometry, and universal use for maximum flexibility in use.

ATORN HSSE machine tap (DIN 374)

For use in cast iron and short-chipping, non-ferrous metals

MF | ≤3xd | HSSE | TiAlN | ISO 2 | C (2-3)

No. 13271

No. 13290

K MAX Control

Application:

For producing metric threads on CNC or conventional machines in **through holes and blind holes** in the non-ferrous metals (short-chipping) and cast iron material groups.

Advantage:

- **No. 13271:** Long service life and good process reliability due to innovative cutting edge geometry when machining cast iron and short-chipping non-ferrous metals
- **No. 13290:** Long service life and good process reliability due to innovative rake when machining cast iron and short-chipping, non-ferrous metals

p. 211 p. 215 p. 24 p. 849 p. 339

ATORN HSSE-PM and solid carbide machine tap (DIN 371 similar)

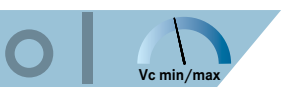
For machining hardened steels

MF | ≤1xd | HSSE-PM | VHM | TiCN | ISO 2 | D (3,5-5) | CNC/conv.

No. 13152

No. 13153

H MAX Control



Application:

No. 13152: For producing fine metric threads on CNC machines in **through holes and blind holes** in the hardened steel material group **up to 55 HRC**.

No. 13153: For manufacturing fine metric threads on CNC machines in **through and blind holes** in the hardened steel material group **up to 65 HRC**.

Execution:

- With reinforced shank

Advantage:

- Long service life and high process reliability thanks to innovative cutting geometry and coating for use on hardened steel

p. 211 p. 215 p. 24 p. 849 p. 339

ATORN Machine tap, HSSE Ultra HL (DIN 5156)

for universal use up to 1,000 N/mm2

G | ≤3xd | ≤2,5xd | HSSE | ULTRA HL | ISO 2 | B (3,5-5) | C (2-3) | CNC/conv.

No. 13208

No. 13377

UNI MAX 45HL Control — Vc min/max

p. 211 p. 215 p. 24 p. 849 p. 339

Application:

No. 13208: For manufacturing pipe threads on CNC or conventional machines in **through holes** in the steel, stainless steel, NF metal, cast and special alloy material groups up to a strength of 1000 N/mm².

No. 13377: For producing pipe threads on CNC machines or conventional machines in **blind holes** in the steel, stainless steel, non-ferrous metals, cast iron and special alloy material groups up to a strength of 1000 N/mm².

Execution:

- **No. 13208:** With protruding shank
- **No. 13377:** With transition-fit shank

Advantage:

- **No. 13208:**
  - Innovative cutting geometry and ULTRA HL coating guarantee high process reliability even under difficult machining conditions
  - High-quality, torsion-resistant HSSE cutting material and cutting edge finish for very high service life requirements
  - Universal use for maximum flexibility
- **No. 13377:**
  - Innovative cutting geometry and newly developed ULTRA HL coating guarantee high process reliability even under difficult machining conditions.
  - High-quality, torsion-resistant HSSE cutting material and cutting edge finish for very high service life requirements.
  - Universal use for maximum flexibility in use.

ATORN HSSE machine tap (DIN 371 similar)

For use on stainless steels

NPT | HSSE | TiN | ISO 2 | C (2-3) | CNC/conv.

Application:

For manufacturing NPT (National Pipe Taper) on CNC or conventional machines in the (steel) and stainless steel material groups up to a strength of 1000 N/mm².

Execution:

- With protruding shank

Advantage:

- Innovative cutting geometry for very high dimensional accuracy, process reliability and chip removal.
- High-quality, torsion-resistant HSSE cutting material and cutting edge finish for very high service life requirements.
- **No. 13360:** Specialised use with optimised chip geometry for use in stainless steels.
- **No. 13361:** Universal use for maximum flexibility in use.

ATORN HSSE machine tap

For universal use up to 1,000 N/mm²

UNC | ≤3xd | ≤2,5xd | HSSE | ISO 2 | B (3,5-5) | C (2-3) | CNC/conv.

Application:

For producing metric threads on CNC machines or conventional machines in **through holes** in the steel, stainless steel, non-ferrous metals and cast iron material groups up to a strength of 1000 N/mm².

Advantage:

- Universal use for maximum flexibility
- Innovative cutting geometry ensures high process reliability even under difficult machining conditions

ATORN HSSE machine tap

For universal use up to 1,000 N/mm²

UNF | ≤3xd | ≤2,5xd | HSSE | B (3,5-5) | C (2-3) | CNC/conv.

No. 13357

No. 13358

P MAX 1000 Control — Vc min/max

p. 211 p. 215 p. 24 p. 849 p. 339

Application:

No. 13357: For producing UNF (Unified Fine) threads on CNC machines or conventional machines in **through holes** in the steel, (stainless steel), non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

No. 13358: For producing UNF (Unified Fine) threads on CNC machines or conventional machines in **blind holes** in the steel, (stainless steel), non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

Execution:

- **No. 13357 040–13357 110, 13358 070–13358 110:** With reinforced shank
- **No. 13357 150–13357 170:** With transition-fit shank
- **No. 13358 120–13358 180:** With protruding shank

Advantage:

- Innovative cutting geometry for very high dimensional accuracy, process reliability and chip removal.
- High-quality, torsion-resistant HSSE cutting material and cutting edge finish for very high service life requirements.
- Universal use for maximum flexibility in use.

ATORN HSSE machine tap (DIN 371 similar)

for universal use up to 1,000 N/mm2

NPT | HSSE | ISO 2 | C (2-3) | CNC/conv.

Application:

For manufacturing NPT (National Pipe Taper) on CNC or conventional machines in the steel, NF metal and (cast) material groups up to a strength of 1000 N/mm².

Execution:

- With protruding shank

Advantage:

- Innovative cutting geometry for very high dimensional accuracy, process reliability and chip removal.
- High-quality, torsion-resistant HSSE cutting material and cutting edge finish for very high service life requirements.
- Universal use for maximum flexibility in use.

ATORN HSS hand tap (DIN 352)

For universal use up to 1,000 N/mm²

M | ≤3xd | HSS | ISO 2 | D (3,5-5) | C (2-3) | A (6-8)

Ident. No. 010–752
Taper tap, shape A

Ident. No. 010–420, 820–852
Second tap, shape D

Ident. No. 010–420, 920–952
Third tap, shape C

Application:

Ident. No. 010–420: For manually tapping metric threads in through holes and blind holes in the steel, NF metal and (cast) material groups up to a strength of 1000 N/mm² in single part production.

Ident. No. 720–952: For producing metric threads by hand in through holes and blind holes, in steel, non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm² in single-part production.

Execution:

- **Ident. No. 010–420:** Set consisting of taper tap (form A), second tap (form D) and third tap (form C)
- **Ident. No. 720–752:** Taper tap with notch shape A with one ring
- **Ident. No. 820–852:** Second tap with notch shape D with two rings
- **Ident. No. 920–952:** Third tap (plug) with notch shape C without ring

Advantage:

- **Ident. No. 010–420:** Long service life and high level of process reliability thanks to innovative cutting geometry and universal application for maximum flexibility in use
- **Ident. No. 720–952:** Long service life and process reliability through innovative cutting geometry and universal use for maximum application flexibility

ATORN HSS left-hand hand tap set (DIN 352)

For universal use up to 1,000 N/mm²

Application:
For manually tapping metric left-hand threads in through holes and blind holes in the steel, NF metal and (cast) material groups up to a strength of 1000 N/mm² in single part production.

Execution:
- Set consisting of taper tap (form A), second tap (form D) and third tap (form C)

Advantage:
- Long service life and high level of process reliability thanks to innovative cutting geometry and universal application for maximum flexibility in use

Taper tap, shape A

Second tap, shape D

Third tap, shape C

ORION® HSS hand tap (DIN 352)

For universal use up to 1,000 N/mm²

M | HSS | ≤3xd | ISO 2 | D (3,5-5) | C (2-3) | A (6-8)

Ident. No. 010–768
Taper tap, shape A

Ident. No. 010–300, 820–868
Second tap, shape D

Ident. No. 010–300, 920–968
Third tap, shape C

p. 211 p. 75 p. 331 p. 333 p. 339

Application:

Ident. No. 010–300: For manually tapping metric threads in through holes and blind holes in the steel, NF metal and (cast) material groups up to a strength of 1000 N/mm² in single part production.

Ident. No. 720–968: For producing metric threads by hand in through holes and blind holes, in steel, non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm² in single-part production.

Execution:

- **Ident. No. 010–300:** Set consisting of taper tap (form A), second tap (form D) and third tap (form C)
- **Ident. No. 720–768:** Taper tap with notch shape A with one ring
- **Ident. No. 820–868:** Second tap with notch shape D with two rings
- **Ident. No. 920–968:** Third tap (plug) with notch shape C without ring

Advantage:

- **Ident. No. 010–300:** Standard geometry with a very good price-performance ratio
- **Ident. No. 720–968:** Standard geometry with very good price/performance ratio

Prod. Gr. 1DA

ATORN HSSE hand tap (DIN 352)

For machining stainless steel

M | HSSE | HSS | ≤3xd | ISO 2 | D (3,5-5) | C (2-3) | A (6-8)

Ident. No. 620–800
Third tap, shape C

Ident. No. 020–400
Taper tap, shape A

Ident. No. 020–200, 420–600
Second tap, shape D

p. 211 p. 75 p. 331 p. 333 p. 339

Application:

Ident. No. 020–200: For manually tapping metric threads in through holes and blind holes in the (steel), stainless steel, (cast) and special alloy material groups up to a strength of 1300 N/mm² in single part production.

Ident. No. 220–800: For producing metric threads by hand in through holes and blind holes, in (steel), stainless steel, (cast iron) and special alloys material groups up to a strength of 1300 N/mm² in single-part production.

Execution:

- **Ident. No. 020–200:** Set consisting of taper tap (form A), second tap (form D) and third tap (form C)
- **Ident. No. 220–400:** Taper tap with notch shape A with one ring
- **Ident. No. 420–600:** Second tap with notch shape D with two rings
- **Ident. No. 620–800:** Hand tap, third tap (plug) with notch shape C without ring

Advantage:

- **Ident. No. 020–200:** Long service life and high level of process reliability thanks to innovative cutting geometry for machining stainless steel and special alloys
- **Ident. No. 220–800:** Long service life and process reliability through innovative cutting geometry in machining stainless steel and special alloys

ATORN HSSE hand tap set (DIN 352)

For high-strength steels < 1,300 N/mm²

M | HSSE | ≤3xd | ISO 2 | D (3,5-5) | C (2-3) | A (6-8)

Application:

Ident. No. 020–160: For manually tapping metric threads in through holes and blind holes in the (steel), stainless steel, (cast) and special alloy material groups up to a strength of 1300 N/mm² in single part production.

Ident. No. 720–952: For producing metric threads by hand in through holes and blind holes, in steel, (stainless steel), cast iron and (special alloys) material groups up to a strength of 1300 N/mm² in single-part production.

Execution:

- **Ident. No. 020–160:** Set consisting of taper tap (form A), second tap (form D) and third tap (form C)
- **Ident. No. 720–752:** Taper tap with notch shape A with one ring
- **Ident. No. 820–852:** Second tap with notch shape D with two rings
- **Ident. No. 920–952:** Third tap (plug) with notch shape C without ring

Advantage:

- **Ident. No. 020–160:** Long service life and high level of process reliability thanks to innovative cutting geometry for machining high-strength steel
- **Ident. No. 720–952:** Long service life and process reliability through innovative cutting geometry in machining high-strength steel

ATORN ORION® HSS hand tap (DIN 2181)

For universal use up to 1,000 N/mm²

MF | ≤3xd | HSS | ISO 2 | D (3,5-5) | C (2-3)

No. 13020 045–13023 786
Taper tap, shape D

No. 13020 045–13023 280, 13023 803–13023 886
Third tap, shape C

p. 211 p. 75 p. 331 p. 333 p. 339

Application:

No. 13020 045–13020 360, 13023 803–13023 886: For manually tapping fine metric threads in through holes and blind holes in the steel, NF metal and (cast) material groups up to a strength of 1000 N/mm² in single part production.

No. 13023 030–13023 786: For producing metric fine threads by hand in through holes and blind holes, in steel, non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm² in single-part production.

Execution:

- **No. 13020:** Set consisting of taper tap (form A) and third tap (form C)
- **No. 13023 030–13023 280:** Set containing taper tap (form A) and third tap (plug) (form C)
- **No. 13023 703–13023 786:** Taper tap with notch shape A with one ring
- **No. 13023 803–13023 886:** Third tap notch shape C without ring

Advantage:

- **No. 13020:** Long service life and high level of process reliability thanks to innovative cutting geometry and universal application for maximum flexibility in use
- **No. 13023 030–13023 786:** Standard geometry with very good price/performance ratio
- **No. 13023 803–13023 886:** Standard geometry with a very good price-performance ratio

ATORN HSS left-hand hand tap set (DIN 2181)

for universal use up to 1,000 N/mm2

MF-L | ≤3xd | HSS | ISO 2

Application:
For producing metric fine threads by hand in through holes and blind holes, in steel, non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm² in single-part production.

Execution:
- Set containing taper tap (form A) and third tap (plug) (form C)

Advantage:
- Long service life and process reliability through innovative cutting geometry and universal use for maximum application flexibility

Taper tap, shape D

Third tap, shape C

ORION ATORN HSS hand tap (DIN 5157)

For universal use up to 1,000 N/mm²

G | ≤3xd | HSS | ISO 2 | D (3,5-5) | C (2-3)

Application:

No. 13045 010–13046 140: For producing pipe threads by hand in through holes and blind holes, in steel, non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm² in single-part production.

No. 13046 710–13046 880: For manually tapping pipe threads in through holes and blind holes in the steel, NF metal and (cast) material groups up to a strength of 1000 N/mm² in single part production.

Execution:

- **No. 13045 010–13046 140:** Set containing taper tap (form D) and third tap (plug) (form C)
- **No. 13046 710–13046 780:** Taper tap with notch shape A with one ring
- **No. 13046 820–13046 880:** Third tap notch shape C without ring

Advantage:

- **No. 13045:** Long service life and process reliability through innovative cutting geometry and universal use for maximum application flexibility
- **No. 13046 010–13046 140:** Standard geometry with very good price/performance ratio
- **No. 13046 710–13046 880:** Standard geometry with a very good price-performance ratio

No. 13045 010–13046 140, 13046 820–13046 880
Third tap, shape C

No. 13045 010–13046 780

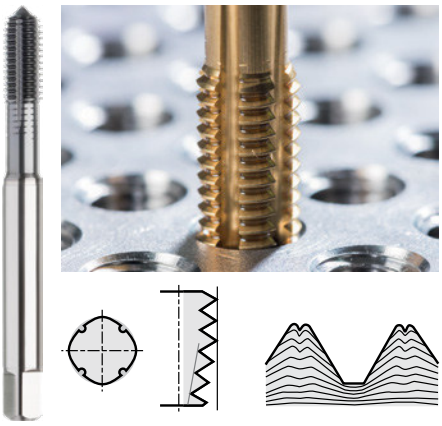
Female thread creation: Thread forming (thread tapping)

In contrast to tapping, where sections are cut out of the material, the process of thread forming does not involve cutting. The material is made to flow through the polygon shape of the thread former. The fibre pattern is not interrupted.



Advantages:

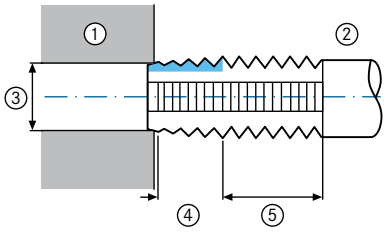
- Very high working speed and process reliability
- Very high surface quality
- One tool for through hole and blind hole
- No clamping problems
- Higher thread strength
- Tools are easier to use
- Long service life, less breakage
- Deep threads

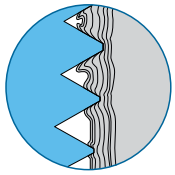
Disadvantages:

- Higher torque
- Special pre-drilling diameter with tight tolerance
- Incomplete moulding of cores (claw)
- Minimum expansion of tool must be ensured
- Regrinding not possible
- Lubrication essential
- Where used in the food or medicine industries, there is a risk of germ build-up in the area of the moulding recess.

Thread forming — the process

unlike with screw tapping, in thread forming the thread is produced by deforming the material. the screw-shaped, polygonal, threaded part of the tool is “screwed in” to the pre-drilled workpiece. It is fed in evenly to match the target thread pitch. the thread profile penetrates the workpiece gradually via the initial cut, causing it to flow and deform plastically.

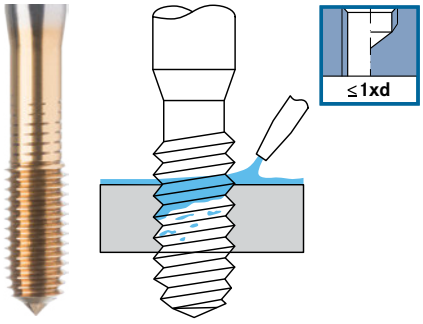




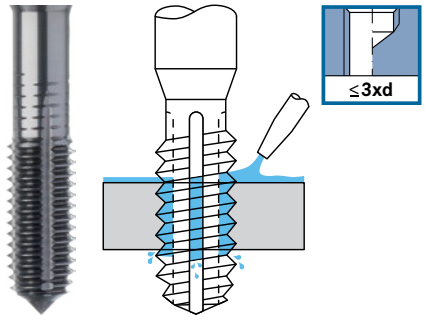
① workpiece ② tool ③ pre-drill diameter
④ run-in ⑤ guide part

Lubrication grooves on thread formers

We distinguish between two different tool types when it comes to thread formers. There are thread formers with and without lubrication grooves. Lubrication grooves ensure uniform lubrication even in the lower section of deeper threads. Lubrication grooves are also necessary in horizontal machining. Thread formers with lubrication grooves can be used universally. Thread formers without lubrication grooves can produce thread depths of up to 1.5xD with an optimum service life.



Thread formers without lubrication grooves



Thread formers with lubrication grooves

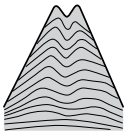
Core hole drilling when thread forming

It is also necessary to drill core holes when thread forming, in order to create a shaped thread. The core hole must have a defined diameter within a certain tolerance range. Countersinking is also essential. When thread forming, however, the core hole is significantly more accurate than when tapping.

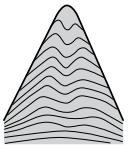
Example:
Thread M10 x 1.5 is 9.30 mm.
Tolerance = max. hole 9.38 mm - min. hole = 9.26 mm = 0.12 mm.
When tapping, the tolerance for the same thread is 0.3 mm.

It is important that the drilling is conducted with very accurate drills. The best results are achieved with solid carbide tools. The following graphics illustrate the relationship between the various core hole diameters and their impact on the formed thread.

Pre-drill diameter too large:
- Thread not fully formed
- Moulding recess too big
- Profile height too low



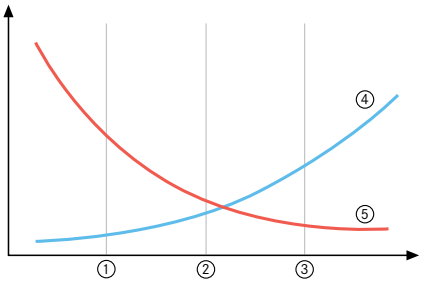
Optimal pre-drill diameter:
- Thread fully formed
- Small moulding recess
- Ideal profile height



Pre-drill diameter too small:
- Thread over-formed
- No moulding recess
- Profile height too high

By optimising the pre-drill diameter, a significantly higher service life can be achieved, not only in series production generally, but also with materials which are difficult to machine such as stainless steel. This graphic illustrates the relationship:

① Minimum dimension
② Nominal dimension
③ Maximum dimension
④ Service life
⑤ Torque

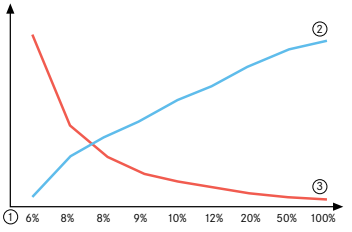


Lubrication and cooling during thread forming

in thread forming, the main job of the coolant is lubrication. the more lubrication is used with the highest possible grease content, the longer the service life. we distinguish between the following coolants:

non water-soluble coolants
these are mineral oils with the best lubricating properties. they minimise friction and thus increase the service life.

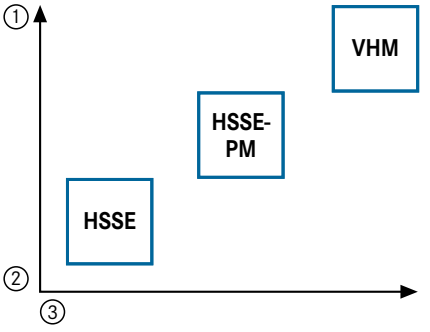
water-soluble coolants
can be emulsified with water. the grease content of these coolants should be no lower than 6%. the ideal grease content is over 12%.



① coolant grease content ② service life ③ friction

Cutting materials in thread forming

Selecting the correct cutting material in thread forming depends strongly on the machine conditions and the quantity to be manufactured. The cutting materials HSSE and HSSE-PM are used in the small to medium quantity range or with unstable machine conditions. In large-scale series production, it is more economical to use solid carbide thread formers.



① Stable ② Unstable ③ Service life/procurement costs

Clamping device recommendation for thread forming

● = very well suited ◉ = suitable ○ = limited suitability

Coatings and surface treatments for thread forming

Titanium nitride
This universal coating is suitable for softer steels and non-ferrous metals. It is only of limited suitability for high-strength steel and stainless steels.
- Vickers hardness: 2200–2300 HV
- Friction coefficient: 0.5
- Temperature resistance: 500–600°C
- Colour: Gold

TiN

Titanium carbon nitride
Its high level of hardness makes titanium carbon nitride coating very well suited to all steels as well as stainless steels, titanium and cast materials above GGG50.
- Vickers hardness: 3000 HV
- Friction coefficient of steel: 0.2
- Temperature resistance: 400°C
- Colour: Blue grey
- (anthracite) lubrication: Oil/emulsion

TiCN

Titanium aluminium nitride
The titanium aluminium nitride coating is suitable for steels and for alloyed heat-treated steels, tool steels, high-speed steels, stainless steels, titanium, hardened steels and nickel-based materials.
- Vickers hardness: 3200 HV
- Friction coefficient of steel: 0.2
- Temperature resistance: <800°C
- Colour: Blue-grey (anthracite)
- Lubrication: Oil/emulsion

TiAlN

Aluminium chrome nitride
The aluminium chrome nitride coating achieves a very long service life due to its wear resistance, oxidation resistance and high-temperature hardness. This coating is only suitable for steel materials in combination with oil as a coolant.
- Vickers hardness: 3200 HV
- Friction coefficient of steel: 0.35
- Temperature resistance: <1100°C
- Colour: Grey blue
- Lubrication: Oil

AlCrN

CARBO
The CARBO coating is an extremely hard layer and was developed for all non-ferrous metals such as copper, brass and aluminium. Built-up edges are significantly reduced by the high level of hardness and low friction coefficient.
- Vickers hardness: 6000 HV
- Friction coefficient: 0.1
- Temperature resistance: 700°C
- Colour: Black
- Lubrication: Oil/emulsion

CARBO

ATORN Machine thread former HSSE-TiN type Uni

for universal use up to 1,300 N/mm2

M | ≤1xd | HSSE | TiN | CNC/conv. | C (2-3)

Ident. No. 009–201

Ident. No. 620–720

p. 211 p. 287 p. 24 p. 849 p. 339

Application:

For producing metric threads in through holes and blind holes on CNC and conventional machines in the steel, stainless steel and NF metal material groups up to a strength of 1300 N/mm² with > 10% material expansion.

Execution:

- Without lubrication grooves, structural dimensions according to: DIN 371 = reinforced shank (up to M10), DIN 376 = protruding shank (from M12)

Advantage:

- Innovative mould geometry ensures very high dimensional accuracy and process reliability
- **Ident. No. 120–201, 720:** High-quality, torsion-resistant HSSE cutting material and surface finish for very high service life requirements

ATORN Machine thread former HSSE TiCN type Uni Max

For universal use in series production, up to 1,500 N/mm²

Application:

For producing metric threads in through holes and blind holes on CNC or conventional machines in **steel, stainless steel and non-ferrous metals up to a strength of 1500 N/mm².**

Advantage:

- Innovative shape geometry optimised for machining high-strength materials
- High-quality, torsion-resistant HSSE cutting material and surface finish ensure a long service life

p. 211 p. 287 p. 24 p. 849 p. 339

ATORN ORION® Machine thread former HSSE-TiN type Uni

For universal use up to 1,300 N/mm²

Application:
For manufacturing metric threads in through and blind holes on CNC or conventional machines in the **steel, stainless steel and non-ferrous metals up to a strength of 1300 N/mm²**.

Advantage:
- **No. 13392 730–13394 200, 13394 330–13394 416:** Innovative mould geometry ensures very high dimensional accuracy and process reliability
- **No. 13394 212–13394 216:** Innovative mould geometry ensures very high dimensional accuracy and process reliability.

ATORN Machine thread former HSSE-ALCRN lubrication grooves

For universal use up to 1,300 N/mm² with oil lubrication

Application:
For manufacturing metric threads in through and blind holes on CNC or conventional machines **with oil lubrication** in **steel, stainless steel and non-ferrous metals up to a strength of 1300 N/mm²**.

Advantage:
- Innovative mould geometry ensures very high dimensional accuracy and process reliability.
- High-quality, torsion-resistant HSSE cutting material and surface finish for very high service life requirements.

p. 211 p. 287 p. 24 p. 849 p. 339

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN HSSE-PM TiN synchronous machine thread former

For universal use up to 1,300 N/mm²

Application:
For manufacturing metric threads in through and blind holes on CNC or conventional machines in the **steel, stainless steel and non-ferrous metals up to a strength of 1300 N/mm²**.

Advantage:
- Innovative mould geometry ensures very high dimensional accuracy and process reliability.
- Short guide component reduces friction.

p. 211 p. 287 p. 24 p. 849 p. 339

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN Machine thread former HSSE-PM TiCN IC radial type Uni Max H6

For universal use up to 1,300 N/mm²

Application:
For manufacturing metric threads in blind holes on CNC or conventional machines in the steel, stainless steel and non-ferrous metal material groups up to 1300 N/mm².

Execution:
- with oil grooves and internal cooling h6 shank

Advantage:
- H6 shank for shrinking applications
- Innovative mould geometry ensures very high dimensional accuracy and process reliability
- High-quality, torsion-resistant HSSE PM cutting material and surface finish for very high service life requirements

p. 211 p. 287 p. 24 p. 849 p. 339

ATORN Machine thread former HSSE-TiN type Uni (DIN 374)

For universal use up to 1,300 N/mm²

MF | ≤3xd | HSSE | TiN | CNC/conv. | C (2-3)

Application:

For producing metric threads in through holes and blind holes on CNC and conventional machines in the steel, stainless steel and NF metal material groups up to a strength of 1300 N/mm² with > 10% material expansion.

Advantage:

- Innovative mould geometry ensures very high dimensional accuracy and process reliability
- High-quality, torsion-resistant HSSE cutting material and surface finish for very high service life requirements

Technical data:

- DIN: 374

Do you need more than just a hammer, pair of pliers or a screwdriver? We have the full range for you. Machining tools, handling systems and measuring technology. However, we also offer tailor-made system solutions, large and small machinery and complete factory equipment. In total, more than 120,000 products.

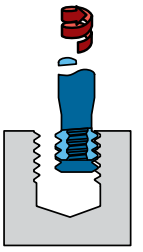
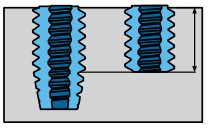
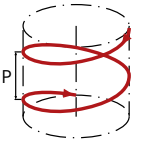
HAHN+KOLB GROUP
LET'S WORK TOGETHER.

Female thread creation: Milling cutter

The development of computer-controlled machines has made the thread milling procedure another option for creating internal threads. The thread is produced by the helical diagonal immersion of a rotating tool. In the process, the axial movement of the tool during one revolution produces the pitch. A CNC machine with at least three axes is required (XYZ).







Advantages, tool cost minimisation:

- right-hand and left-hand thread can be manufactured with a tool
- thread milling cutters cover different threads with the same pitch
- for partial thread profiles, a wide range of threads can be produced with a cutting insert

Advantages, process reliability:

- Extremely high process reliability for very expensive components
- Reliable solution for problem materials with chip breaking issues and difficult chip formation
- First choice for thin-walled workpieces or unstable clamping
- High thread quality
- Thread can be produced down to the bottom of a blind hole
- Radius compensation programming enables thread tolerance to be adjusted easily

Disadvantages:

- Machine requirements (XYZ axes)
- In series production, usually longer machining times
- Limited experience of the user in thread milling

Clamping device recommendation for thread milling

ATORN solid carbide drill thread milling cutter for internal thread
For universal use up to 68 HRC

Application: Drilling and thread milling in a single step in soft and hard machining.
Advantages:
- Very high machining speed and service life, particularly for hard machining of steels
- High profitability and process stability

Note:
- -55 HRC with emulsion for sufficient cooling and chip removal!
- >55 HRC with air for sufficient cooling and chip removal!

Process steps:
① Tool moves to starting position, centred above thread position
② Begin with circular milling motion
③ Circular drill thread milling cutting to thread depth
④ End thread milling process with an ascending loop
⑤ Movement to starting position and end of machining procedure

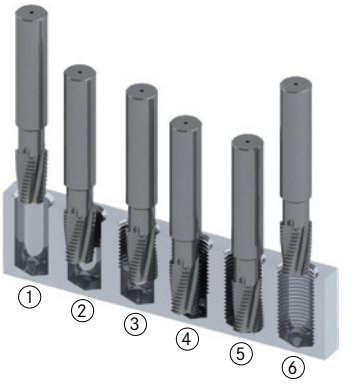
ATORN solid carbide multi-range thread milling cutter for female threads

Application:
For variable and precise thread milling of female threads with constant pitch. Due to the collar groove between the threaded portion and shank, a depth offset is possible in order to produce a deeper thread.

Advantages:
- Low tool costs thanks to high variability in the thread diameter and one tool for right-hand and left-hand thread
- Large thread depth achievable
- Very high wear resistance and cutting speeds thanks to ultra fine micrograin structure

Note:
Ensure that the tool clamping is stable!

Process steps for thread milling cutter with collar groove:
① Tool moves to starting position, centred above bore hole
② Start of thread milling with descending loop
③ Thread milling with subsequent ascending loop
④ Start of second thread milling programme with descending loop
⑤ Thread milling with subsequent ascending loop
⑥ Movement to starting position and end of machining process



ORION ATORN Multi-range thread milling cutter SC TIAIN M/MF (60°) IC axial

For universal use up to 1,500 N/mm2 in female threads

VHM | TiAlN | ≤2xd | ≤1,5xd | IK | HA

Application:

Ident. No. 241–258: For producing **metric** right-hand and left-hand threads on CNC machines in through holes and blind holes in the steel, stainless steel, non-ferrous metals, cast iron and special alloy material groups up to a strength of 1,500 N/mm².

Ident. No. 560–612: For producing **metric** right-hand and left-hand threads on CNC machines in through holes and blind holes in the steel, stainless steel, non-ferrous metals, cast iron and special alloy material groups up to a strength of 1500 N/mm².

Execution:

- Precision-ground thread milling cutter

Advantage:

- **Ident. No. 241–258:** Innovative rake for very high dimensional accuracy, process reliability and chip removal
- **Ident. No. 560–612:** Innovative cutting geometry for very high dimensional accuracy, process reliability and chip removal.

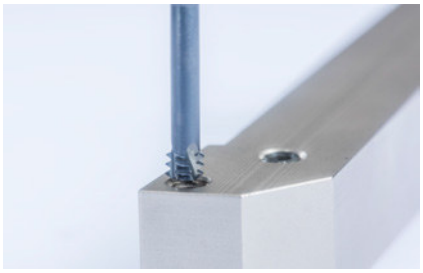
ATORN solid carbide thread milling cutter

Application:
For smaller boreholes with straight shank from M1x0.25 to 3xD.

Advantages:
- Extremely low cutting pressure and thus excellent surface quality
- Universal applications
- Very long service life thanks to multi-layer coating
- Thread milling down to the blind hole
- A tool for right- and left-handed thread

Process steps:
① Tool moves to starting position, centred above bore hole
② 90° arc in
③ Thread milling
④ 90° arc out
⑤ Final position



ATORN ORION® Solid carbide TiAlN 2xD thread milling cutter (M, MF)

For universal use up to 1,500 N/mm2 in female threads

VHM | TiAlN | ≤2xd | HA

Application:
For producing metric right-hand and left-hand threads on CNC machines in through holes and blind holes in the steel, stainless steel, non-ferrous metals, cast iron and special alloy material groups up to a strength of 1500 N/mm².

Execution:
- Thread milling cutters with short thread section

Advantage:
- **Ident. No. 902–928:**
  - Innovative cutting geometry and high-quality cemented carbide ensure very high degree of dimensional accuracy, process reliability and chip removal
  - Tapping of very small threads from M1 x 0.2 possible

ORION ATORN Thread milling cutter SC TIAlN 2xD (M, MF)

For machining hard materials up to 63 HRC in female threads

VHM | TiAlN | ≤2xd | HA

Application:

Ident. No. 131–141: For producing metric right-hand and left-hand threads on CNC machines in through holes and blind holes in the hardened steel material group up to a strength of 63 HRC.

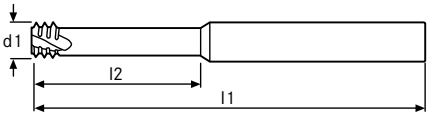
Ident. No. 970–981: For producing metric right-hand and left-hand threads on CNC machines in through holes and blind holes in the hardened steel material group up to a strength of 63HRC.

Execution:

- Thread milling cutters with short thread section

Advantage:

- **Ident. No. 131–141:**
  - Innovative rake and coating technology ensure very high degree of dimensional accuracy, process reliability and chip removal
  - Thread milling of very small threads from M2 x 0.4 possible
- **Ident. No. 970–981:**
  - Innovative cutting geometry and coating technology ensure very high dimensional accuracy, process reliability and chip removal.
  - Tapping of very small threads from M2 x 0.4 possible.



Ident. No. 970–981

p. 296 p. 39 p. 339

Notes:

Ident. No. 131–141: The tool must be used in an anti-clockwise rotation!

Ident. No. 970–981: The tool must be used in an anti-clockwise direction!

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

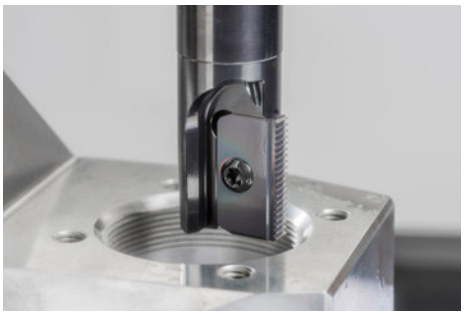
Thread milling system with indexable insert
For universal use

- Innovative coating technology and carbide mixtures for long service life and wide-ranging machining applications up to a hardness of 62 HRC
- Very high surface qualities of the threads
- Deep threads can be manufactured with high process reliability



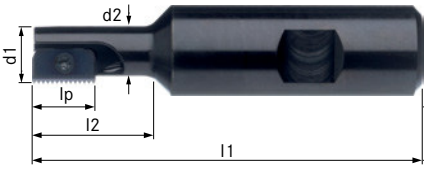
ATORN Steel holder for single-edge thread milling cutter
For using thread milling cutter plates

HB IK

Application:
For using ground thread milling cutter inserts no. 13397.

Execution:
- Burnished steel tool holder with one insert seat

Advantage:
- High process reliability and dimensional accuracy due to precise insert seating
- High-quality carrier material for very high service life requirements



p. 296 p. 305 p. 339

Prod. Gr. 132

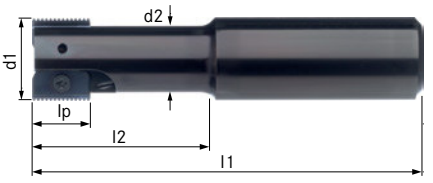
ATORN Steel holder for double-edge thread milling cutter
For using thread milling cutter plates

HB IK

Application:
For using ground thread milling cutter inserts no. 13397.

Execution:
- Burnished steel tool holder with two insert seats

Advantage:
- High process reliability and dimensional accuracy due to precise insert seating
- High-quality carrier material for very high service life requirements
- High machining speed due to two-tip geometry



p. 296 p. 305 p. 339

Suitable for indexable insert size	Cutting edge length (mm)	d1 (mm)	Suitable for min. Ø (mm)	Shank Ø (mm)	l1 (mm)	l2 (mm)	13397... Ident. No.

ATORN Indexable inserts for thread milling cutter

For universal use up to 1,300 N/mm²

Application:
For producing metric right-hand and left-hand threads on CNC machines, in steel, stainless steel, non-ferrous metals, cast iron and special alloys material groups up to a strength of 1500 N/mm² in single-part production and series production.

Execution:
- **Ident. No. 200–268:** Indexable insert, solid profile 60° female, both sides precision-ground (indexable insert size 12 = one side only)
- **Ident. No. 310–368:** Indexable insert, solid profile, 60° male
- **Ident. No. 406–456:** Indexable insert, solid profile 55° male and female, both sides precision-ground (indexable insert size 12 = one side only)

Advantage:
- Innovative cutting geometry ensures very high dimensional accuracy, process reliability and chip removal
- High-quality cutting material and cutting edge finish
- Low tool costs due to high variability

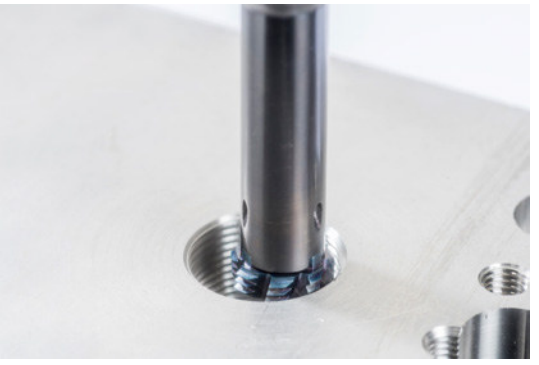
Prod. Gr. 132

Thread milling system with front insert
for universal use

- Multi-cutter attachments ensure high production rates and long service life
- Innovative coating technology and carbide mixtures for long service life and wide-ranging machining applications up to a hardness of 62 HRC
- Very high surface qualities of the threads
- Deep threads can be manufactured in a process-safe manner



ATORN Steel holder for thread milling cutter
For front-face cutting attachment

HB IK

Application:
For using ground thread milling cutter inserts no. 13397.

Execution:
- Burnished steel tool holder

Advantage:
- High process reliability and dimensional accuracy due to precise insert seating
- High-quality carrier material for very high service life requirements

Technical data:
- Tool holding device: HB parallel shank

ATORN Cutting insert, triple-edge cutter, 60° sub-profile

For universal use up to 1,500 N/mm² in male and female threads

Application:
For producing metric right-hand and left-hand threads on CNC machines, in steel, stainless steel, non-ferrous metals, cast iron and special alloy material groups up to a strength of 1500 N/mm².

Execution:
- Three-flute cutter in sub-profile design (indexable inserts type A25 in four-flute cutter design)

Advantage:
- Innovative cutting geometry for excellent dimensional tolerance and process reliability
- High-quality cutting material and cutting edge finish
- Low tool costs due to high variability

Prod. Gr. 1FE

ATORN Cutting insert, multi-edge cutter, 55° sub-profile

For universal use up to 1,500 N/mm² in male and female threads

Application:

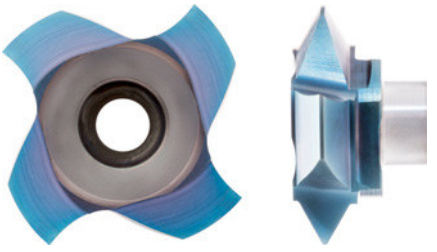
For producing imperial right-hand and left-hand threads on CNC machines, in steel, stainless steel, non-ferrous metals, cast iron and special alloy material groups up to a strength of 1500 N/mm².

Execution:

- Multiple-edge cutter in sub-profile design

Advantage:

- Innovative cutting geometry for excellent dimensional tolerance and process reliability
- High-quality cutting material and cutting edge finish
- Low tool costs due to high variability



p. 296 p. 306 p. 339

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plastics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN Cutting insert, triple-edge cutter, 55° sub-profile

For universal use up to 1,500 N/mm² in male and female threads

Application:

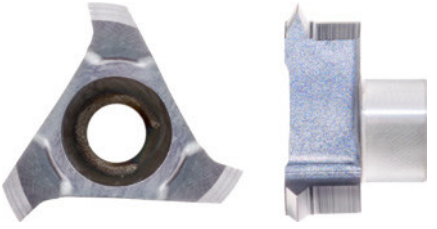
For producing metric right-hand and left-hand threads on CNC machines, in steel, stainless steel, non-ferrous metals, cast iron and special alloy material groups up to a strength of 1500 N/mm².

Execution:

- Three-flute cutter in sub-profile design (indexable inserts type A25 in four-flute cutter design)

Advantage:

- Innovative cutting geometry for excellent dimensional tolerance and process reliability
- High-quality cutting material and cutting edge finish
- Low tool costs due to high variability



p. 296 p. 306 p. 339

ATORN Cutting insert, multi-edge cutter, 60° full profile

for universal use up to 1,500 N/mm2

Application:
For producing metric right-hand and left-hand threads on CNC machines, in steel, stainless steel, non-ferrous metals, cast iron and special alloy material groups up to a strength of 1500 N/mm².

Execution:
- Multiple-edge cutter in full-profile design

Advantage:
- Innovative cutting geometry for excellent dimensional tolerance and process reliability
- High-quality cutting material and cutting edge finish
- Precise thread milling of profiles

ATORN HSS hand tap set in box (DIN 352)

For use in high-strength steel up to 1,300 N/mm²

M | ≤1xd | HSS | HSSE-PM | HSSE

Application:
Ident. No. 010: Hand tap set HSS for through hole and blind hole, in steel, non-ferrous metals and (cast iron) -**1000 N/mm²**.
Ident. No. 012: Hand tap set HSSE for through hole and blind hole, in high-strength steel -**1300 N/mm²**.
Ident. No. 016: Hand tap set for HSSE-PM through hole and blind hole, made of high-strength steel -**1300 N/mm²**.

Advantage:
- Innovative cutting geometry ensures very high dimensional accuracy, process reliability and chip removal
- Robust metal box protects the tool
- **Ident. No. 010:** Universal application for maximum flexibility
- **Ident. No. 012–016:** Optimised chip geometry for use on hardened steel

ORION® Threading tool set

For universal use up to 1,000 N/mm²

G | M | MF | ≤1xd | HSS

Application:

Ident. No. 312–900: for producing **metric (M)** male and female threads by hand in blind holes and through holes, in steel, non-ferrous metals and (cast-iron) material groups up to a strength of 1000 N/mm².

Ident. No. 902: for producing fine male and female metric threads (MF) by hand in blind holes and through holes, in steel, non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

Ident. No. 904: for producing male and female pipe (G) threads by hand in blind holes and through holes, in steel, non-ferrous metals and (cast iron) material groups up to a strength of 1000 N/mm².

Execution:

- **Ident. No. 312:** Hand tap sets, HSS, comprising taper tap with one ring (Type A), second tap with two rings (Type D) and third tap (plug) (Type C) and die with tap wrench and thread gauge
- **Ident. No. 520–900:** Hand tap sets, HSS, comprising taper tap with one ring (Type A), second tap with two rings (Type D) and third tap (plug) (Type C) and die with tap wrench, die holder and thread gauge
- **Ident. No. 902–904:** Hand tap sets, HSS, comprising taper tap with one ring (Type A) and third tap (plug) (Type C) and die with tap wrench, die holder and thread gauge

Advantage:

- Standard geometry with very good price/performance ratio

ATORN Machine tap + core drill set (DIN 371 | 376)

In blind holes

M | HSSE | ≤2,5xd

Application:

Ident. No. 015: Screw tap set HSSE + core drill for blind holes in steel, (stainless steel), non-ferrous metals and (cast iron) - **1000 N/mm²**.

Ident. No. 025: Screw tap set HSSE + core drill for blind holes in high-strength steel - **1300 N/mm²**.

Ident. No. 035: Screw tap set HSSE + core drill for blind holes in steel, (stainless steel), non-ferrous metals and cast iron - **1300 N/mm²**.

Ident. No. 060: Screw tap set HSSE + core drill for blind holes in steel, stainless steel, non-ferrous metals and cast iron - **1000 N/mm²**.

Execution:

- **Ident. No. 015:** For individual screw taps, see 13281; for individual core drills, see 11020.
- **Ident. No. 025:** For individual screw taps, see 13306; for individual core drills, see 11020.
- **Ident. No. 035:** For individual screw taps, see 13052; for individual core drills, see 11020.
- **Ident. No. 060:** For individual screw taps, see 13121; for individual core drills, see 11020.

Advantage:

- Innovative cutting geometry for high process reliability
- **Ident. No. 015, 035–060:** Universal application for maximum flexibility
- **Ident. No. 025:** Optimised chip geometry for high-strength steel

Machine tap set, empty

For screw taps and core drills

Application:
For storing M3 to M12 machine taps and core drills.

Execution:
- Empty steel metal box for screw taps and core drills

Advantage:
- Robust metal box protects the tool from damage and contamination

Composition of set		1 of each machine tap M3/M4/M5/M6/M8/M10/M12 for through holes and blind holes, 1 of each core drill with diameter 2.5/3.3/4.2/5.0/6.8/8.5/10.2

ORION® Screw tap bit set

For universal use up to 700 N/mm²

M | HSS | ≤1xd

Application:

For producing metric threads for portable use on cordless drill screwdrivers in through holes, in steel, non-ferrous metals and (cast iron) material groups up to a strength of 700 N/mm² in single-part production.

Execution:

- Precision-ground, right-hand and short machine tap set with 1/4" hexagon drive, HSS for M3, M4, M5, M6, M8, M10, M12 and magnetic steel tool holder for high requirements in terms of process reliability and service life

Advantage:

- Standard geometry with very good price/performance ratio

ORION® Combination thread bit

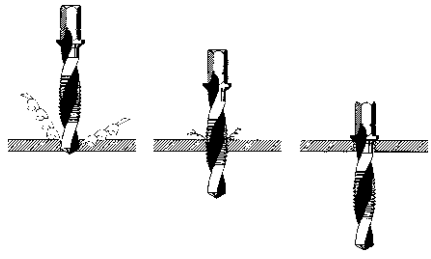
For universal use up to 700 N/mm²

M | HSS | ≤ 1xd

Application:
For producing metric threads (drill, thread, deburr and clean thread in one operation!) for portable use on cordless drill screwdrivers and hand drills in clockwise rotation and anti-clockwise rotation in steel, non-ferrous metals and (cast iron) material groups up to a strength of 700 N/mm² up to 1xD thread depth in single-part production.

Execution:
- Precision-ground, right-hand screw tap with drill step and 1/4" hexagon drive

Advantage:
- Standard geometry with very good price/performance ratio
- High productivity, since drilling, thread de-burring and thread cleaning are achieved in one operation
- Robust metal box protects the tool from damage and contamination



Tap drilling - thread cutting - deburring

ATORN Drill extractor for machine tap (DIN 374)

For use in hardened steels up to 63HRC

VHM

Application:
For drilling out broken-off screw taps (HSS, HSSE, HSSE PM) up to a hardness of 65 HRC using bench-type or column-type drills, wet or dry machining at a rotation speed of 1000-2000 rpm in hand-feed or for wet machining on CNC machines at a rotation speed of 1400-2400 rpm and a feed rate of 0.03-0.06 per revolution. The drill bit has a service life of 3 to 5 screw taps.

Execution:
- Solid carbide-TiN drill bit, with three cutting edges

Advantage:
- User-friendly and efficient removal of screw taps saves time and money.
- Innovative cutting geometry ensures high process reliability and a long service life.

ATORN Drill extractor for machine tap set (DIN 374)

For use in hardened steels up to 63HRC

Application:
For drilling out broken-off M3, M4, M5, M6, M8, M10 and M12 screw taps (HSS, HSSE, HSSE-PM) up to a hardness of 65 HRC using bench-type or column-type drills in wet or dry machining at a rotation speed of 1000–2000 rpm with hand-feed or for wet machining on CNC machines at a rotation speed of 1400–2400 rpm with a feed rate of 0.03–0.06 per revolution. The drill bit has a service life of 3 to 5 screw taps.

Execution:
- Precision-ground drill bit for screw taps, solid carbide-TiN, with three cutting edges for M3, M4, M5, M6, M8, M10 and M12 for extremely high requirements for process reliability and service life.

Advantage:
- User-friendly and efficient removal of screw taps saves time and money.
- Innovative cutting geometry ensures high process reliability and a long service life.
- Sturdy plastic tool box protects the tools from dirt and damage.

Technical data:
- Suitable for screw thread: M3 | M4 | M5 | M6 | M8 | M10 | M12

ATORN HSS threading die (EN standard 22568)

For universal use up to 700 N/mm²

M | HSS | DIN 13 6g

Application:

No. 13410: For tapping metric male threads in the steel and NF metal material groups up to a strength of 700 N/mm².

No. 13412: For producing **left-hand metric male threads** in the steel and non-ferrous metals material groups up to a strength of 700 N/mm².

Execution:

- **No. 13410:** Right-handed die, M1 to M1.4 = tol. 6h, M1.6 to M36 = tol. 6g with spiral point (from M3), pre-slotted, 1.75-threaded chamfer
- **No. 13412:** Left-handed die M3 to M24 = tol. 6g with spiral point, pre-slotted, 1.75-threaded chamfer

Advantage:

- Universal use for maximum flexibility
- Micro-cutting edge treatment and special lapping process for high process reliability and a long service life

ORION HSS threading die (EN standard 22568)

For universal use up to 700 N/mm2

M | HSS | DIN 13 6g

Application:

For tapping metric male threads in the steel and NF metal material groups up to a strength of 700 N/mm².

Execution:

- Right-handed die, M1 to M1.4 = tol. 6h, M1.6 to M36 = tol. 6g with spiral point (from M3), pre-slotted, 1.75-threaded chamfer

Advantage:

- Standard geometry with a very good price-performance ratio

ATORN HSSE threading die (EN standard 22568)

for universal use up to 1,300 N/mm2

M | HSSE | DIN 13 6g

Application:
For tapping metric male threads in the steel, stainless steel, NF metal and special alloy material groups up to a strength of 1300 N/mm².

Execution:
- Right-handed die, tol. 6g with spiral point (from M2) and nitrided, pre-slotted, 2.0-threaded chamfer

Advantage:
- Specialised insert with optimised chipping geometry for use in materials that are difficult to machine
- Micro-cutting edge treatment and special lapping process for high process reliability and a long service life

p. 334

ATORN HSS hexagonal threading die (DIN 382)

for universal use up to 700 N/mm2

M | HSS | DIN 13 6g

Application:
For retapping and repairing damaged metric male threads in the steel and NF metal material groups up to a strength of 700 N/mm².

Execution:
- Right-handed hexagonal die with tol. 6g

Advantage:
- Hexagonal design for tapping difficult to reach threads
- Micro-cutting edge treatment and special lapping process for high process reliability and a long service life

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN HSS hexagonal threading die set (DIN 382)

for universal use up to 700 N/mm2

M | HSS | DIN 13 6g

Application:
For retapping and repairing damaged metric male threads in the steel and NF metal material groups up to a strength of 700 N/mm².

Execution:
- Right-handed die set, hexagonal, for M3, M4, M5, M6, M8, M10 and M12, tol. 6g

Advantage:
- Innovative cutting geometry for high process reliability
- Micro-cutting edge treatment and special lapping process for high process reliability and a long service life
- Hexagonal design for tapping difficult to reach threads
- Sturdy metal case protects the tool from dirt and damage

Min./max. thread-cutting area, metric		3-12 mm

ORION ATORN HSS threading die (EN standard 22568)

For universal use up to 700 N/mm²

MF | HSS | DIN 13 6g

No. 13440

No. 13442

p. 334

Application:
No. 13440: For tapping fine metric male threads in the steel and NF metal material groups up to a strength of 700 N/mm².
No. 13442–13445: For cutting fine metric threads externally in the material groups of steel and non-ferrous metals up to a strength of 700 N/mm².

Execution:
- **No. 13440: Right-handed** die, MF2 = tol. 6h, MF2.6 to MF50 = tol. 6g, MF63 = tol. 8g with spiral point, pre-slotted, 1.75-threaded chamfer
- **No. 13442: left** die, tol. 6 g with spiral point, pre-slotted and 1.75 pitch
- **No. 13445: right** die, tol. 6 g with spiral point, pre-slotted and 1.75 pitch

Advantage:
- **No. 13440:**
  - Universal use for maximum flexibility
  - Micro-cutting edge treatment and special lapping process for high process reliability and a long service life
- **No. 13442:**
  - universal use for maximum flexibility during application
  - micro cut edge treatment and special lapping method for excellent process reliability and long service life
- **No. 13445:** standard geometry with excellent price/performance ratio

ATORN® = Prod. Gr. 1KJ

ORION® ATORN® HSSE threading die (EN standard 22568)

For universal use and stainless steel

MF | HSSE | DIN 13 6g

Application:
For cutting fine metric threads externally in the material groups of steel, stainless steel, non-ferrous metals and special alloys up to a strength of 1300 N/mm².

Execution:
- right die. tol. 6 g with spiral point, nitrided, pre-slotted and 2.0 pitch

Advantage:
- **No. 13446:**
  - specialised application with optimised cutting geometry for use in difficult-to-machine materials
  - micro cut edge treatment and special lapping method for excellent process reliability and long service life
- **No. 13447:** standard geometry with excellent price/performance ratio

ORION ATORN HSS threading die (EN standard 24231)

For universal use up to 700 N/mm²

G | HSS | A

Application:
For cutting G (pipe) threads externally in the material groups of steel and non-ferrous metals up to a strength of 700 N/mm².

Execution:
- right die. tol. A with spiral point and 1.75 pitch

Advantage:
- **No. 13480:**
  - universal use for maximum flexibility during application
  - micro cut edge treatment and special lapping method for excellent process reliability and long service life

ORION ATORN HSSE threading die (EN standard 24231)

For use in steel up to 1,300 N/mm², stainless steel and special alloys

G | HSSE | A

Application:
No. 13484: For cutting G (pipe) threads externally in the material groups of steel, stainless steel, non-ferrous metals and special alloys up to a strength of 1300 N/mm².
No. 13488: For tapping male (pipe) threads in the steel, stainless steel, NF metal and special alloy material groups up to a strength of 1300 N/mm².

Execution:
- **No. 13484:** right die. tol. A with spiral point, nitrided, pre-slotted and 2.0 pitch
- **No. 13488:** Right-handed die, tol. A with spiral point, pre-slotted, 2.0-threaded chamfer

Advantage:
- **No. 13484:**
  - specialised application with optimised cutting geometry for use in difficult-to-machine materials
  - micro cut edge treatment and special lapping method for excellent process reliability and long service life
- **No. 13488:** Standard geometry with a very good price-performance ratio

No. 13484 No. 13488

ATORN HSS threading die (EN standard 22568)

for universal use up to 700 N/mm2

BSW | HSS

Application:
For cutting BSW (British Whitworth) threads externally in the material groups of steel and non-ferrous metals up to a strength of 700 N/mm².

Execution:
- right die with spiral point and 1.75 pitch

Advantage:
- universal use for maximum flexibility during application
- micro cut edge treatment and special lapping method for excellent process reliability and long service life

ORION® Machine tap extension

For use of machine taps

Application:
For extending machine taps in conjunction with deep and difficult to reach threads on CNC and conventional machines, in tapping chucks or quick-change chucks.

Execution:
- Steel tool holder with collet chuck and clamping nut; steel shank of the extension pursuant to DIN for high requirements for process reliability and service life

Advantage:
- Very flexible and fast solution as there is no need to procure special machine taps
- User-friendly handling with short changeover times
- Excellent value for money

ORION® Tool extension

For screw taps with straight shanks and square drives

Application:
For extending machine taps for use with threads that are deep and difficult to reach.

Execution:
- Precision-ground steel tool holder, hardened and tempered with square drive pursuant to DIN 10

Advantage:
- User-friendly handling with short changeover times
- Excellent value for money

Technical data:

ORION® Fixed ball-type tap wrench

For holding screw taps and reamers

Application:
For mounting screw taps and reamers with square.

Execution:
- Steel tool holder with screw-off arm and 4 square holes to DIN 10

Advantage:
- High-quality steel with very good wear characteristics and chromium-plated extensions for high corrosion resistance
- User-friendly handling and short retooling times
- Excellent value for money

Prod. Gr. 109

ORION® Adjustable tap wrench, round version

For holding screw taps and reamers

Application:
For mounting very small screw taps and reamers with square.

Execution:
- Plastic tool holders with hardened steel jaws

Advantage:
- Ergonomic design for delicate, precise operations
- Hardened clamping jaws ensure low wear
- Highly compact, robust design

Suitable for square socket size (mm)		2.4
Min./max. thread-cutting area, metric		1-2.6 mm
Min./max. thread-cutting area, imperial		1/16-3/32 in
13547...	Ident. No.	010 ●

Prod. Gr. 139

ATORN Tool holder with ratchet mechanism and centring eye

For holding screw taps and reamers

Application:
For mounting screw taps. With the aid of the centring eye, the tool can be placed straight and the thread can be cut.

Execution:
- With right/left adjustment, retaining clamp adjustable in 3 positions
- With centring eye for flush alignment of the screw tap without angle
- Clamping jaws burnished and hardened

Advantage:
- Specific alignment with the aid of the centring eye

Length (mm)		85	100	250	300

Prod. Gr. 1KR

ATORN Adjustable tap wrench, round version

For holding screw taps and reamers

Application:
For holding screw taps on all common cordless drills. Thicker shank provides higher torque when cutting larger threads.

Advantage:
- Higher torque when cutting
- Precision thread cutting without stripping threads

Min./max. thread-cutting area, metric		3-8 mm	5-12 mm
13546...	Ident. No.	080 ●	082 ●

Prod. Gr. 1KR

ATORN ORION® Adjustable steel tap wrench

For holding screw taps and reamers

Application:
No. 13546: For accommodating square-head screw taps in accordance with DIN 10, reamers, screw extractors, screw tap extensions, tools with square mounts.
No. 13551: For holding
square-head screw taps in accordance with DIN 10, reamers, screw extractors, screw tap extensions, tools with square mounts

Execution:
- **No. 13546:** Housing made of high-quality steel, correct alignment of the screw tap thanks to integrated centring eye
- **No. 13551:** Housing, size 1–2, made from forged steel, size 3–7/8, welded solid-steel design, zinc-plated arm with knurling for very high loads

Advantage:
- **No. 13546:**
  - High-quality steel ensures a higher load capacity
  - Clamping jaws precision-eroded and hardened
  - Guide groove to hold the split pin and to stabilise the jaw
  - Sustainable production and packaging
- **No. 13551:**
  - Safe work even using high forces
  - Ground and hardened steel jaws

ATORN ORION® Adjustable die-cast zinc tap wrench

For holding screw taps and reamers

Application:
For holding
square-head screw taps in accordance with DIN 10, reamers, screw extractors, screw tap extensions, tools with square mounts

Execution:
- **No. 13546:** Housing size 0-6 made of special zinc die-casting, refined by environmentally friendly powder coating
- **No. 13549:** Housing, size 0–5, made of die-cast zinc, zinc-plated arm with knurling for medium loads

Advantage:
- **No. 13546:**
  - Innovative die-cast zinc with up to 120% higher torque
  - Clamping jaws precision-eroded and hardened
  - Guide groove to hold the split pin and to stabilise the jaw
  - Sustainable production and packaging
- **No. 13549:**
  - Die-cast zinc ensures excellent value for money
  - Ground and hardened steel jaws

ATORN ORION® Threading die holder with manual clamp

For holding threading dies

Application:
For mounting closed and/or slotted dies to DIN EN 22568 and DIN EN 24231.

Execution:
- **No. 13546:** Housing size 0-13 made of special die-cast zinc, refined by environmentally friendly powder coating
- **No. 13559:** Housing, size 0-12, made from die-cast zinc, size 13-17, made from steel and from size 7 with screw-off arm

Advantage:
- User-friendly handling and short retooling times
- Knurling ensures safe work, even with severe contamination
- **No. 13546:**
  - Due to honeycomb shape, up to 80 % more stress-resistant
  - Due to special die-cast zinc, faulty areas in the castings are avoided

No. 13546

No. 13559

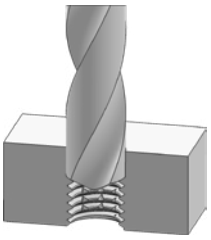
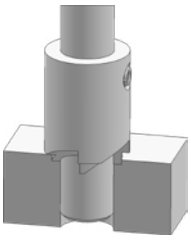
Thread repair
for the production of pressure-tight and continuous duty thread

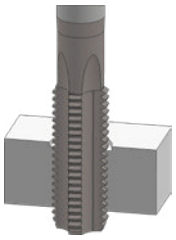
Advantages:
- ATORN thread repair bushings are designed for continuous high loads as well as frequent screwing and unscrewing
- Pressure-sealed for water, oil, other liquids and gases
- Secured against unscrewing without adhesive
- The collar makes additional fixing in the workpiece unnecessary
- Also suitable for the food industry, available in stainless steel on request
- Can be used in the following materials: Aluminium, brass, steel and cast iron materials



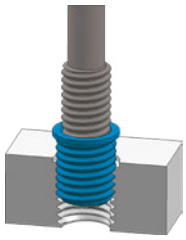
1.
Drill the damaged thread down to the bottom.
Note the drilling guidance!



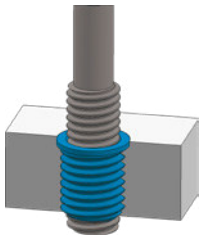
2.
Countersinking the hole to the depth stop.



3.
Thread cutting with screw tap.



4.
With the screw-in tool, the thread insert is completely screwed into the thread.
Pay attention to oil lubrication!



5.
Continue to turn the tool until the screw-in resistance is noticeably reduced again. This is the only way to ensure that the bushing is pressed into the threads of the workpiece.

Thread repair

Version:
Thread inserts are formed into a helix from rhombic-profiled stainless steel wire. This results in wear-resistant, corrosion-resistant and heat-resistant threads with narrow tolerances.

Application: ideal for
- **Thread plating** in materials with reduced shearing strength
- **Repairing** damaged or worn-out threads
- **Scrap recycling**

Important:
Thread insert at least ¼ turn below the workpiece top surface and seated only in fully cut thread.

1.
Drill the tapping hole for the insert

2.
Cut the adapter thread

3.
Screw in the thread insert

4.
Break the threaded pin

HELICOIL® Plus made by BÖLLHOFF Thread repair assortment box M5 to M12

For repairs or reinforcement of threads

Application:
For thread reinforcement in materials with low shear resistance, for repairing damaged and worn threads and for scrap recovery.

Execution:
- 230-part set containing 20x M5/M6, 10x M8/M10/M12, in 1xD/1.5xD/2.0xD and 5 x HSS twist drill, HSS screw tap, turning tool and pin breaker made from high-strength steel. Thread inserts made from rhombically profiled stainless steel wire formed in a helix

Advantage:
- Broad assortment covers a broad range of machining applications
- High-quality and durable insert, user-friendly handling
- Corrosion-resistant and heat-resistant, non-wearing, scrap recovery, even load distribution and tension distribution

Technical data:
- Suitable for screw thread: M5-M12

13568...	Ident. No.	050 ●

Prod. Gr. 153

HELICOIL® Plus made by BÖLLHOFF Thread repair sets, metric

For repairs or reinforcement of threads

Application:
For thread reinforcement in materials with low shear resistance, for repairing damaged and worn threads and for scrap recovery.

Execution:
- Repair set for thread size 20 x M4/M5/M6 or 10 x M8/M10/M12, in 1 x D/1.5 x D/2.0 x D and HSS twist drill, HSS screw tap, turning tool and pin breaker made from high-strength steel

Advantage:
- Corrosion-resistant and heat-resistant, non-wearing, scrap recovery, even load distribution and tension distribution
- Broad assortment covers a broad range of machining applications
- High-quality and durable insert, user-friendly handling

Notes:
M12 supplied without break-off tool, M16 supplied without break-off tool and core drill

HELICOIL® Plus made by BÖLLHOFF Screw tap

For cutting threads in Helicoil inserts

Application:
Very well suited for cutting Helicoil threads in through holes and blind holes, in steel, non-ferrous metals and (cast iron) material groups, up to a strength of 1000 N/mm² in small batch numbers.

Execution:
- Precision-ground, right-hand Helicoil screw tap with protruding shank

Advantage:
- Innovative cutting geometry ensures very high dimensional accuracy, process reliability and chip removal
- High-quality cutting material and cutting edge treatment for very high service life requirements
- Cutting geometry optimised for Helicoil inserts

YOU TAKE ON DIFFICULT CHALLENGES.
WE HAVE WHAT IT TAKES.
Do you need more than just a hammer, pair of pliers or a screwdriver?
We have the full range for you. Machining tools, handling systems and
measuring technology. However, we also offer tailor-made system solutions,
large and small machinery and complete factory equipment.
In total, more than 120,000 products.

LET'S WORK TOGETHER.

Sawing process

Sawing is a process of separation involving circular or linear cutting movements to sever or cut semi-finished products or profile material. The material is cut by the cutting teeth of the saw. The resulting chip material is transported out of the kerf between the gaps in the teeth.

A distinction is made between the following saw types:

Bow saws:

A machine-operated bow saw is driven by a motor and a gear that converts the rotary movement into forward or reverse thrust. The saw blade is driven either hydraulically or mechanically.

Advantages:
- Low purchase price
- Compact machine design
- Easy to use
- Low maintenance intensity

Disadvantages:
- Small diameter range
- Low machining speed

Bandsaws:

A bandsaw is a machine tool with guide and drive rollers on which the saw belt is tensioned and driven.

Advantages:
- High machining speed
- Low purchase price
- Good cutting quality
- Low tool costs
- Very large dimensional range
- Easy to use
- Automation

Disadvantages:
- Large footprint
- Difficult to change tools
- Low machining speed

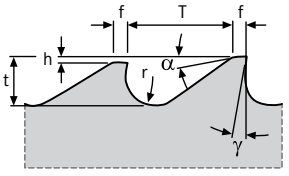
Circular saws:

Advantages:
- High machining speed
- Low purchase price
- Very good cutting quality
- Rapid tool replacement
- Very wide range of dimensions
- Easy to use
- Automation

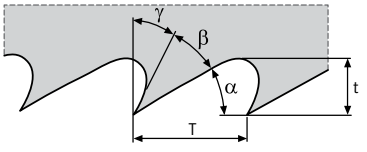
Disadvantages:
- High tool costs
- Low machining speed
- Narrow range of dimensions

Angle and pitch at saw tooth

The size of the angle is defined by the shape of the saw blade. The clearance angle defines the size of the chip space. As the size of the clearance angle increases, so does the size of the chip space.
The lip angle in turn gives the saw tooth stability. Hard and tough materials therefore require a large lip angle. In general, the lip angle is approximately 50°; the clearance and lip angle together are approx. 90°.



Circular saws

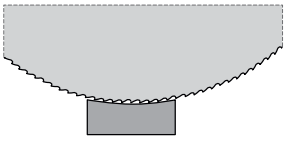


Bandsaws

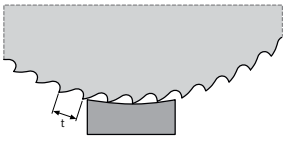
α clearance angle (°)
β lip angle (°)
γ chip angle (°)
T tooth pitch (mm)
t tooth depth (mm)
h height difference (mm)
f clearance angle chamfer (mm)
r curvature radius (mm)

Number of contact teeth on metal circular saws

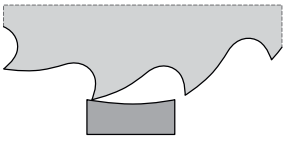
When selecting the number of teeth, it is important that two to three teeth are in use. If too many teeth are in use, the cutting forces are too high and it leads to saw blade breakage. If too few teeth are in use, too much cutting performance is being expected per tooth. The following graphics illustrate the relationship.



Too fine



Correct



Too coarse

Cutting materials on metal circular saws

When separating and cutting slots (grooves), the following cutting materials are used.

HSS

HSS metal circular saws can be used in materials up to 1000 N/mm². This cutting material can also be used in materials up to 1300 N/mm² under certain conditions (increased wear). The cutting material has high bending strength and can be used with unstable machine conditions. The cutting speed is relatively low when machining with this cutting material.

HSSE

Metal circular saws made from HSSE cutting material can be used in materials up to 1300 N/mm². The addition of cobalt allows even difficult materials with high toughness or hardness to be processed. This cutting material has a high flexural strength and can be used in unstable machining conditions. The cutting speed can be slightly increased compared to HSS circular saws.

VHM

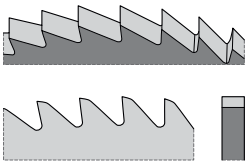
Metal circular saws made of cemented carbide cutting material can be used in all materials. This cutting material allows difficult materials with high toughness or hardness to be processed. The cutting material has a low flexural strength and can only be used in stable machines and clamping conditions. However, the low bending resistance is an advantage in terms of machining accuracy.

Carbide-tipped circular saw blades have a carbide piece soldered onto a steel support. This technology shows its benefits particularly when it comes to machining non-ferrous metals.

Tooth shapes for metal circular saw

When machining with metal circular saw blades, the selection of tooth shape is crucial in the various machining tasks. A distinction is made between the following tooth shapes and their applications:

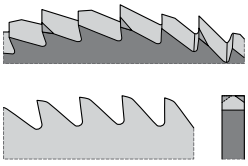
SHAPE A - Metal circular saw blades DIN 1837 A (fine-toothed with angular serration)



Tooth shape A has been developed for working with brittle, short-chipping materials. For this kind of toothing, the chip space is relatively small and can hold only a small volume of chips. The low tooth pitch and low chip volume make the saw blade only suitable for low cutting depths or thin-walled materials.

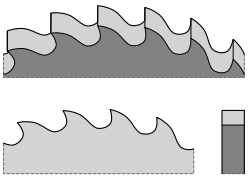
Tooth pitches < 2 are suitable for cutting depths down to 4 mm. With tooth pitch > 2, cutting depths greater than 15 mm depth or cross-section are possible.

SHAPE Aw - Metal circular saw blades DIN 1837 Aw (fine-toothed with alternating toothing)



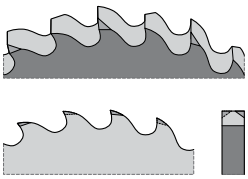
Tooth shape AW has been developed for cutting of thin-walled profiles with low cut depths. With this tooth shape, the chip spaces are relatively small and only a small volume of chips can be accepted.

SHAPE B - Metal circular saw blades DIN 1838 B (coarse-toothed with arc serration)



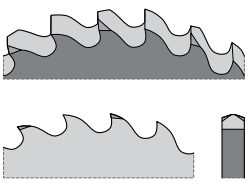
Tooth shape B has been developed for cutting solid material with high cutting depths. For this kind of toothing, the chip space is relatively large and can hold a large volume of chips. It is therefore used universally in numerous applications. The tooth spacing allows 30 % greater chip volume. This tooth shape caters to tough as well as soft materials. Depending on the blade thickness, the tooth pitches range from 3.15 to 12.5 mm. Components with cutting depths and cross-sections up to 100 mm can be sawn.

SHAPE Bw - Metal circular saw blades DIN 1838 Bw (coarse-toothed with alternating toothing)



Tooth shape Bw has been developed for cutting solid material with high cutting depths (applications with cutting depths in excess of 5 % of the saw blade diameter). This tooth shape produces narrower chips and allows the chip material to expand laterally (heat-induced). This tooth shape caters to tough as well as soft materials. The chips are 1/3 narrower and reduce the cutting forces at the tooth base by 30 %. More space is created for the coolant in the area to be cut.

SHAPE C - Metal circular saw blades DIN 1838 C (coarse-toothed with arc serration with pre- and post-cutter = HZ serration)



Tooth shape C is used to separate materials. Owing to its chip-separating tooth shape, it works especially well when machining materials of low to medium strength thanks to high cutting performance.

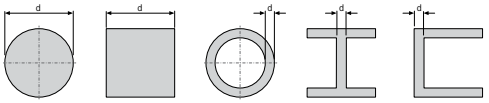
Tooth shape C is best used to produce very deep cuts and with large diameters when cutting workpieces. When producing grooves, a groove is formed in the cut base due to the exaggerated pre-cutter. No straight cut base area is therefore achieved. The taper tap has a 0.1-0.3 mm greater radius than the post-cutting tooth.

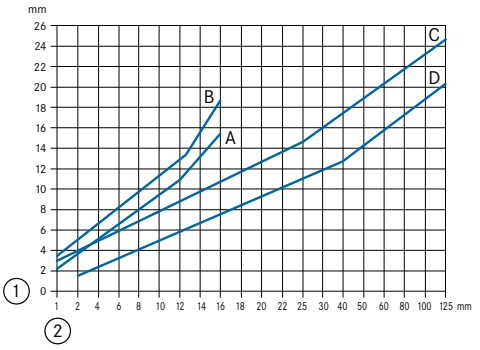
This provides large saw blades with better guidance and therefore greater precision in cutting.

Tooth pitch selection table for machine saw blades

When selecting the tooth pitch, the cross-section of the workpiece to be machined is the key consideration. The following ratio essentially applies: The smaller the cross-section to be machined, the lower the pitch. As a rule of thumb, 2-3 teeth should always be engaged.
The chart illustrates the ratio:

Material	Pipes / Profiles	Solid material
Steel < 800 Nmm²	B	D
Steel 800 to 1200 N/mm²	C	D
Grey cast iron		D
Copper	B	C
Bronze	B	C
Brass, zinc alloys	A	D
Aluminium alloys	B	C





① Pitch in mm ② Cross-section d in mm

ATORN Metal-cutting circular saw blade, finely toothed, shape A, SC (DIN 1837)

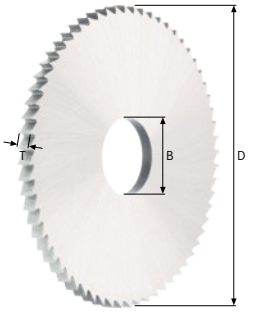
Up to 1,300 N/mm² in thin-walled workpieces and low cutting depths, CNC machines

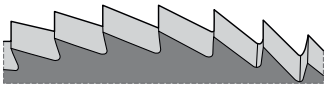
A | VHM

Application:
For making saw cuts in thin-walled workpieces and shallow cutting depths in the material groups of steel, stainless steel, cast iron and non-ferrous metals.

Execution:
- precision-ground metal circular saw blade with tooth shape A, fine-toothed, hollow ground on side

Advantage:
- innovative cutting geometry for very high dimensional accuracy, process reliability and chip removal
- high-quality cutting material for very high service life requirements
- universal use in numerous applications





TYPE A, fine-toothed

ORION® Metal-cutting circular saw blade, finely toothed, shape A, HSS (DIN 1837)

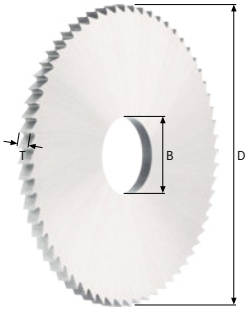
Up to 1,300 N/mm² in thin-walled workpieces and low cutting depths, CNC machines

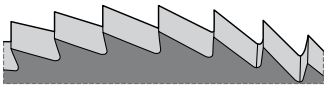
A | HSS

Application:
For making saw cuts in thin-walled workpieces and shallow cutting depths in the material groups of steel, stainless steel, cast iron and non-ferrous metals.

Execution:
- Precision-ground circular metal saw blade with tooth shape A, finely toothed, laterally hollow ground, hole without keyway, up to a diameter of 160 mm without collar, from a diameter of 200 mm with collar

Advantage:
- Innovative cutting geometry ensures very high dimensional accuracy, process reliability and chip removal
- High-quality cutting material for very high service life requirements
- Universal use in numerous applications





TYPE A, fine-toothed

ATORN ORION® Coarse-toothed metal-cutting circular saw blade, shape B (DIN 1838)

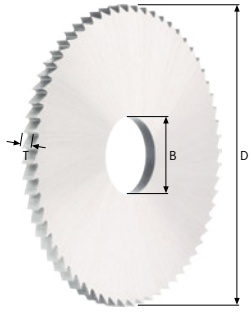
Up to 1,300 N/mm² large cross sections and cutting depths, on CNC machines

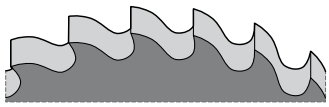
B | HSS | VHM

Application:
For making saw cuts in large cross-sections and for medium to deep cutting depths in the material groups of steel, (stainless steel), cast iron and (non-ferrous metals).

Execution:
- **No. 14004:** precision-ground metal circular saw blade with tooth type B, coarse serrated, laterally hollow ground and hole without keyway
- **No. 14020:** precision-ground metal circular saw blade with tooth shape B, fine-toothed, hollow ground on side

Advantage:
- innovative cutting geometry with large chip space ensures chip removal and universal application
- **No. 14004:**
  - top-quality cutting material for extremely demanding requirements in terms of service life
  - universal use for a multitude of applications
- **No. 14020:**
  - high-quality cutting material for very high service life requirements
  - universal use in numerous applications





TYPE B, coarse-toothed

p. 344 p. 355

ORION HSS metal-cutting circular saw blade, coarse-toothed with taper tap and third tap, shape C (DIN 1838)

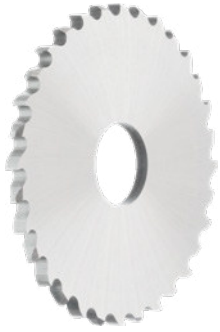
Up to 1,000 N/mm² large cross sections and cutting depths

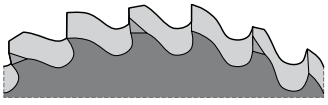
c | HSS

Application:
For creating separation cuts in medium to large cutting depths in the material groups of steel, (stainless steel), cast iron and (non-ferrous metals) up to a strength of 1000 N/mm².

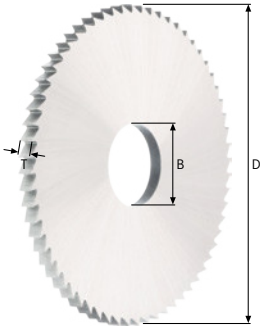
Execution:
- precision-ground metal circular saw blade with tooth type B, coarse serrated with taper tap and third tap, laterally hollow-ground, hole without keyway

Advantage:
- innovative cutting geometry with large chip space plus taper tap and third tap ensures cutting distribution and increases cutting performance
- top-quality cutting material for extremely demanding requirements in terms of service life
- universal use for a multitude of applications





Shape C, coarse-toothed with curved teeth with pre- and post-cutter



p. 344 p. 355

ATORN Carbide-tipped circular saw blades

For use in non-ferrous metals

HM

Application:

No. 14009: For separation cuts, mitre cutting, trimming and longitudinal cuts in aluminium, CuZN, plastics and profiles on high-speed machines, whether fed horizontally or from underneath.

No. 14011: For separation cuts, mitre cutting, trimming and longitudinal cuts in aluminium, CuZN, plastics in thin-walled profiles on high-speed machines, fed from above.

Execution:

- **No. 14009:** circular saw blade with trapezoid carbide inserts with positive 5° chip angle, taper tap and third tap, free-cutting
- **No. 14011:** circular saw blade with trapezoid carbide plates with negative 6° chip angle, taper tap and third tap, free-cutting

Advantage:

- innovative cutting geometry with large chip space plus taper tap and third tap ensures cutting distribution and increases cutting performance
- top-quality cemented carbide for extremely demanding requirements in terms of service life
- **No. 14009:** special geometry ensures smooth and burr-free cuts

ORION® Metal-cutting circular saw blades with secondary pinholes HSS/HSSE

For cutting on sawing machines

C | HSS | HSSE Co5

Application:

Ident. No. 050, 080, 110, 230, 290, 310: For creating saw cuts on low-speed machines such as Eisele, Trennjäger and other brands.

Ident. No. 060–070, 090, 120, 240–250, 300, 410–510: for creating saw cuts on low-speed machines such as Eisele, Trennjäger and other brands.

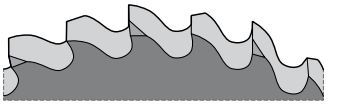
Execution:

- precision-ground metal circular saw blade with Bw tooth type (curved tooth = alternate bevel) and C tooth type (with taper tap and third tap)

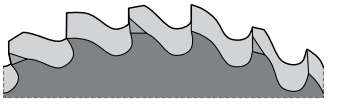
Advantage:

- innovative cutting geometry for cutting solid material with high cutting depths
- steam-treated protects against metal welding
- **Ident. No. 050, 080, 110, 230, 290, 310–410, 430–510:** short narrow swarf is created
- **Ident. No. 060–070, 090, 120, 240–250, 300, 420:** cut distribution enables high cutting performance

Ident. No. 050, 080, 110, 230, 290, 310



SHAPE Bw coarse-toothed with alternate top bevel



Shape C, coarse-toothed with curved teeth with pre- and post-cutter

ORION® Mount for metal-cutting circular saws

Application:
For holding metal circular saw blades 14002-14008 and 16385.

Execution:
- precision-engineered clamp HSSE with 64 HRC, concentricity tolerance = 0.01 mm, straight shank and clamping surface as per DIN 1835 B

Advantage:
- top-quality substrate with high-quality finish for precise work

ORION® Clamp set for metal-cutting circular saws

Application:
For holding metal circular saw blades 14002-14008 and 16385.

Execution:
- precision-engineered clamp set HSSE with 64 HRC, concentricity tolerance = 0.01 mm, straight shank and clamping surface as per DIN 1835, available for saw blade clamp diameters of 20/25/32/40/50/63, clamping screws and clamping discs

Advantage:
- top-quality substrate with high-quality finish for precise work

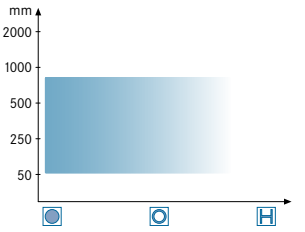
Basic bandsaw blades for workshop and production saws for universal use
Entry-level blades with excellent value for money

For cutting solid material and profiles with a large cross-section with medium to large dimensions in the workshop and production environment. Bandsaw blades with positive chip angle and medium to coarse tooth pitch in basic quality with excellent value for money.



ATORN Bandsaw blades, bimetal, product sold by metre, type PRIMAR® and UNI MAX Basic 10°

UNI application - 1,300 N/mm² solid material profile

Application:
Cutting of solid material, beams and profiles with medium cross-sections in steel, stainless steel, cast iron and non-ferrous metals.

Advantage:
- Positive tooth geometry ensures a soft cut with a long service life on production bandsaws.
- Basic quality with an excellent price/performance ratio.

Notes:
Please quote in the order:
- Order number of the bandsaw blade and welding seam (“bandsaw blade welding service”)
- The length of the blade in millimetres (mm)
- Minimum order quantity 5 pieces

ORION® UNI MAX 10° bimetal bandsaw blades, product sold by metre

UNI insert -1,300 N/mm² solid material profile

Application:
Cutting of solid material, beams and profiles with medium cross-sections in steel, stainless steel, cast iron and non-ferrous metals.

Advantage:
- Positive tooth geometry ensures a soft cut with a long service life on production bandsaws.
- Basic quality with an excellent price/performance ratio

Notes:
Please quote in the order:
- Order number saw belt+welding seam (“Saw belt welding service”)
- The length of the belt in millimetres (mm)
- Minimum order quantity 5 pieces

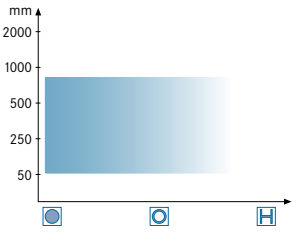
Bandsaw blades for production saws for universal use
High-performance production bandsaw blades

For cutting solid material and profiles with a medium to large cross-section in a production environment. Bandsaw blades with a positive chip angle and medium to coarse tooth pitch for high service life and performance requirements.



ATORN UNI MAX 10° bimetal bandsaw blades, product sold by metre

UNI insert -1,300 N/mm² solid material pipes, thick-walled

Application:
Cutting of solid material, beams and profiles with medium cross-sections in steel, stainless steel, cast iron and non-ferrous metals.

Advantage:
- Positive tooth geometry ensures a soft cut with a long service life on production bandsaws.
- Microfinishing technology ensures a long service life and reduces the running-in of bandsaw blades.

Notes:
Please quote in the order:
- Order number of the bandsaw blade and welding seam (“bandsaw blade welding service”)
- The length of the blade in millimetres (mm)
- Minimum order quantity 5 pieces

Prod. Gr. 1DJ

ATORN Bimetal bandsaw blade product sold by metre type UNI MAX 10°

UNI application - 1,300 N/mm² solid material profile

Application:
Cutting of solid material, beams and profiles with medium cross-sections in steel, stainless steel, cast iron and non-ferrous metals.

Advantage:
- Positive tooth geometry ensures a soft cut with a long service life on production bandsaws.
- Microfinishing technology ensures a long service life and reduces the running-in of bandsaw blades.

Notes:
Please specify in the order:
- Order number saw belt and welding seam ("Saw belt welding service")
- The length of the belt in millimetres (mm)
- Minimum order quantity 5 pieces

Prod. Gr. 1DJ

ORION® Bandsaw blades, bimetal, product sold by metre, type UNI MAX 10° M42

UNI insert -1,300 N/mm² solid material pipes, thick-walled

Application:
Cutting of solid material, beams and profiles with medium cross-sections in steel, stainless steel, cast iron and non-ferrous metals.

Advantage:
- Positive tooth geometry ensures a soft cut with a long service life on production bandsaws.

Notes:
Please quote in the order:
- Order number of the bandsaw blade and welding seam (“bandsaw blade welding service”)
- The length of the blade in millimetres (mm)
- Minimum order quantity 5 pieces

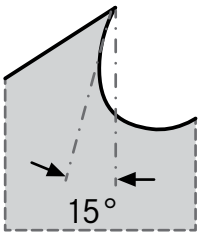
Prod. Gr. 1QM

ORION® Bandsaw blades, bimetal, product sold by metre, type UNI MAX 15° M51

UNI insert -1,300 N/mm² solid material pipes, thick-walled

Application:
Cutting of solid material, beams and profiles with medium cross-sections in steel, stainless steel, cast iron and non-ferrous metals.

Advantage:
- Extremely positive tooth geometry, ensures a soft cut for very tough or long-chipping materials.
- Pre-honed cutting edges minimise tooth breakage and reduce the run-in times of the band saw blade.



- **Ident. No. 190–218:** High-quality M51 HSSE-PM cutting material, ensures an extremely long service life and is very heat-resistant.

Notes:
Please quote in the order:
- Order number of the bandsaw blade and welding seam (“bandsaw blade welding service”)
- The length of the blade in millimetres (mm)
- Minimum order quantity 5 pieces

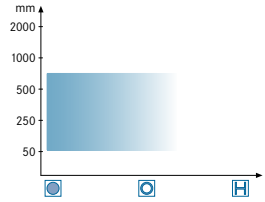
Bimetal, ground bandsaw blades for high performance sawing for production saws and automatic sawing machines

For cutting solid material and profiles with a large cross-section with medium to large dimensions in the production environment, with increased service life and quality-related requirements. Bandsaw blades with a positive ground chip angle and medium to coarse tooth pitch.



ORION® Bandsaw blade, bimetal, product sold by metre, ground, type UNI MAX S 10°

High-performance applications -1,300 N/mm², solid material, thick-walled pipes

Application:
Cutting of solid material with medium cross-sections in steel, stainless steel, cast iron and non-ferrous metals.

Advantage:
- Extremely positive ground tooth geometry ensures very smooth chip removal and precise cuts.
- Ground tooth geometry ensures excellent cutting surfaces and angularity
- High material removal rate thanks to large chip space

Notes:
Please quote in the order:
- Order number of the bandsaw blade and welding seam (“bandsaw blade welding service”)
- The length of the blade in millimetres (mm)
- Minimum order quantity 5 pieces

Prod. Gr. 1QM

ORION® Bandsaw blade, bimetal, product sold by metre, ground, type UNI MAX 15°

High-performance applications -1,300 N/mm², solid material, thick-walled pipes

Application:
Cutting of solid material in solid material with large cross-sections in special alloys, stainless steel, steel, cast iron and non-ferrous metals.

Advantage:
- High-performance belt with ground tooth geometry, optimised for long tool life on high-performance band saws.
- Extremely positive tooth geometry, ensures optimal cutting performance in very tough, hard or long-cutting materials.

- **Ident. No. 260–276:** High-quality M51 HSSE-PM cutting material, ensures an extremely long service life and is very heat-resistant.

Notes:
Please quote in the order:
- Order number of the bandsaw blade and welding seam (“bandsaw blade welding service”)
- The length of the blade in millimetres (mm)
- Minimum order quantity 5 pieces

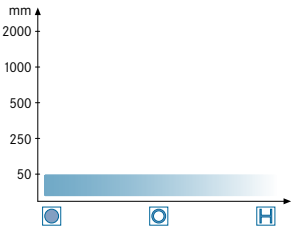
Prod. Gr. 1QM

Bandsaw blades for small to medium-sized workshop saws

Cutting solid material and profiles with small dimensions. Bandsaw blades with a low chip angle and fine tooth pitch, optimised for cutting small dimensions.



ATORN UNI MAX Basic 0° bimetal bandsaw blades, product sold by metre

Universal use -1,300 N/mm² solid material profile

Application:
Cutting of short-chipping solid material and profiles with small cross-sections in steel, stainless steel, cast iron and non-ferrous metals.

Advantage:
- Stable 0° geometry optimised for small cross-sections and profiles on small bandsaws
- Basic quality with an excellent price/performance ratio

Notes:
Please quote in the order:
- Order number of the bandsaw blade and welding seam ("bandsaw blade welding service")
- The length of the blade in millimetres (mm)
- Minimum order quantity 5 pieces

ATORN UNI MAX 0° bimetal bandsaw blades, product sold by metre

Universal use -1,300 N/mm² solid material profile

Application:

Cutting of solid material, beams and profiles with medium cross-sections in steel, stainless steel, cast iron and non-ferrous metals.

Advantage:

- Positive tooth geometry ensures a soft cut with a long service life on production bandsaws.

Notes:

Minimum quantity: 10 pieces up to 27 mm, 5 pieces with a blade width greater than 27 mm

Prod. Gr. 1DJ

ORION ATORN Band saw blades, bimetal, product sold by metre, type UNI MAX 0° M42

Universal use - 1,000 N/mm² solid material profile

Application:

No. 14048 037–14048 086, 14049 670–14049 672: Cutting of solid material, beams and profiles with medium cross-sections in steel, stainless steel, cast iron and non-ferrous metals.

No. 14049 001–14049 090: Cutting of short-chipping solid material and profiles with small cross-sections in steel, stainless steel, cast iron and non-ferrous metals.

Advantage:

- **No. 14048 037–14048 086, 14049 670–14049 672:** Positive tooth geometry ensures a soft cut with a long service life on production bandsaws.
- **No. 14049 001–14049 022:** Basic quality with an excellent price/performance ratio
- **No. 14049 001–14049 090:** Stable 0° geometry optimised for small cross-sections and profiles on small bandsaws
- **No. 14049 670–14049 672:** Basic quality offering excellent value for money

Notes:

No. 14048: Minimum quantity: 10 pieces up to 27 mm, 5 pieces with a blade width greater than 27 mm

No. 14049 001–14049 022: Please quote in the order:

- Order number saw belt+welding seam (“Saw belt welding service”)
- The length of the belt in millimetres (mm)
- Minimum order quantity 5 pieces

No. 14049 060–14049 090: Please quote in the order:

- Order number of the bandsaw blade and welding seam (“bandsaw blade welding service”)
- The length of the blade in millimetres (mm)
- Minimum order quantity 5 pieces

No. 14049 670–14049 672: Min. order volume 5 pieces

YOU TAKE ON DIFFICULT CHALLENGES.
WE HAVE WHAT IT TAKES.
Do you need more than just a hammer, pair of pliers or a screwdriver?
We have the full range for you. Machining tools, handling systems and
measuring technology. However, we also offer tailor-made system solutions,
large and small machinery and complete factory equipment.
In total, more than 120,000 products.

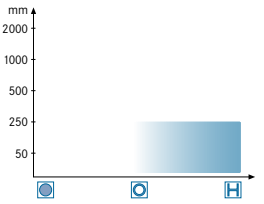
Specialised bandsaw blades for use in beams and profiles

For cutting beams, profiles and bundles across a wide range of dimensions. Bandsaw blades with specialised tooth geometry optimised for interrupted cutting operations.



ATORN Profile MAX bimetal bandsaw blade, product sold by metre

Workshop and production saws in profiles, beams and bundles

Application:
Cutting of profiles, beams and bundles in the steel material group.

Advantage:
- Reinforced tooth geometry prevents tooth break-outs in interrupted cutting.

Notes:
Please quote in the order:
- Order number of the bandsaw blade and welding seam (“bandsaw blade welding service”)
- The length of the blade in millimetres (mm)
- Minimum order quantity 5 pieces

Profile MAX bimetal bandsaw blade, product sold by metre

Workshop and production saws in profiles, beams and bundles

Application:
Cutting of profiles, beams and bundles in the steel material group.

Advantage:
- Very stable tooth geometry ensures high tooth stability and reliable clamping connection for large steel supports with high self-tension due to wider cutting channel.
- Pre-honed cutting edges minimise tooth breakage and reduce the run-in times of the band saw blade.

Notes:
Please quote in the order:
- Order number saw belt+welding seam (“Saw belt welding service”)
- The length of the belt in millimetres (mm)
- Minimum order quantity 5 pieces

ORION® Bandsaw blade, bimetal, sold by the metre, type Uni Max 5-7°

Workshop and production saws in solid material and profiles with small to medium cross-sections

Application:

Cutting of profiles, beams and bundles in the steel material group.

Advantage:

- Excellent balance between cutting flexibility and stability of the tooth geometry in the small and medium range of components, the all-rounder in mixed operation.

Notes:

Please quote in the order:

- Order number of the bandsaw blade and welding seam (“bandsaw blade welding service”)
- The length of the blade in millimetres (mm)
- Minimum order quantity 5 pieces

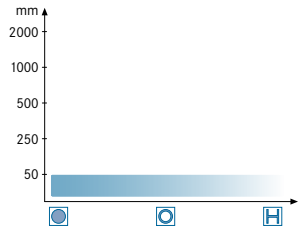
Bandsaw blades on rolls for small vertical sawing machines



ORION® Bandsaw blades on reels 30.5 m Flex Back

For universal use up to 1,000 N/mm²

Application:

Ident. No. 004–054: Separation cuts in small to medium cross-sectional range in steel, non-ferrous metals, wood

Ident. No. 120–148: Separation cuts in small to medium cross-sectional range in steel, non-ferrous metals, wood

Execution:

- Precision-engineered machine saw band 30.5 m, made from special alloy tool steel with chromium content

Advantage:

- universal use caters for a wide range of applications
- **Ident. No. 004–054:** Extremely flexible due to the soft belt back
- **Ident. No. 120–148:** High-strength belt back ensures a high level of stability

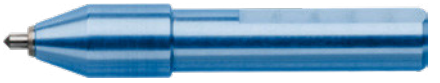
ATORN “Marker PRO” marking tool

For fast and efficient labelling

Application:
the tool produces high-quality marking with a combination of material compaction and material displacement.

Execution:
- Workpiece unevenness is compensated for up to 5 mm
- Possible to mark round surfaces
- Labelling possible both in dry and in wet state
- Marking speed up to 200 m/min
- Compact design for cramped conditions

Advantage:
- universal use in a wide range of materials
- no need for external labelling
- reduced processing times of workpieces
- production efficiency is increased



Type		Marker-PRO12	Marker-PRO20
Housing outer Ø (mm)		14	22
Ø of needle (mm)		3	3
Shank Ø		12	20
Length 2 (mm)		80	107
Composition of set		1 x Marker-PRO12 with clamping surface, 1 x needle with radius 0.3 mm, 1 x needle with radius 0.5 mm, 1 x installation key	1 x Marker-PRO20 with clamping surface, 1 x needle with radius 0.5 mm, 1 x needle with radius 1 mm, 1 x installation key

Solid carbide profiling and special cutter

ORION® Carbide keyway cutter (Milling cutter design standard DIN 850)

HM | Typ N | HA

Application:
For producing slots.

Execution:
- solid carbide

- with smooth straight shank
- hollow-ground on side
- in accordance with DIN 850
- from 13.5 mm in diameter, carbide-tipped

ORION® Carbide T-slot cutter (Milling cutter design standard DIN 851)

HM | Typ N | HA

Application:
For making T-slots conforming to DIN 650

Execution:
- Straight shank according to DIN 1835 A

- Stable cemented carbide cutters
- Cross-toothing
- Corners 0.3 mm x 45°, chamfered
- In accordance with DIN 650

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ORION® Solid carbide quarter circle cutter

Concave

VHM | Typ N | HA

Application:
Quarter circle milling cutter for machining complex forms, e.g. for very small radii on bores. With reduced diameter on the radius runoff so it can be used even in confined working conditions.

Execution:
- Straight shank pursuant to DIN 1636 HA
- Straight grooved
- K15 micro-fine grain

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plastics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

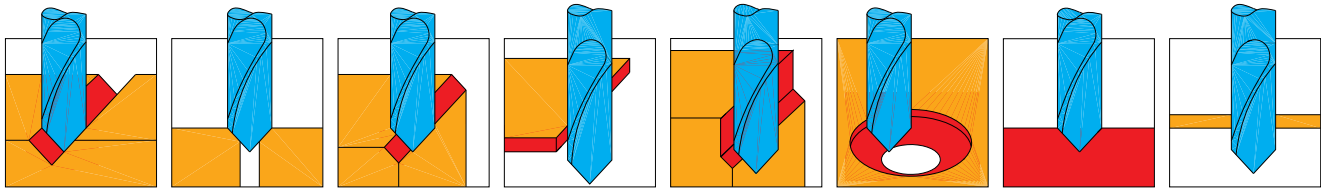
Possible applications: solid carbide chamfer cutter



V slot milling | Countersinking | Angle milling | Face milling | Comb. face and bevel milling | Spot drilling* | Drilling*

* Drilling and spot drilling only in cast and non-ferrous metals.

ORION® Solid carbide chamfer mill

VHM | HA | Typ N

No. 16704

No. 16705

No. 16706

Application:
For cutting chamfers and countersinking on machining centres and CNC machines.

Execution:
- solid carbide ultra-fine grain
- straight shank in accordance with DIN 1636 HA
- uncoated

- **No. 16704:** 60°
- **No. 16705:** 90°
- **No. 16706:** 120°

Notes:
chamfer point flattened 10% of diameter, e.g. dia. 10 = 1 mm

ATORN HIGH FEED SC 90° chamfer mill without tip

for universal use up to 55 HRC

Application:
For producing 45° chamfers and for deburring up to 55 HRC

Execution:
- defined cutting edge rounding
- 10-14 teeth

- High-performance ULTRA H coating for universal application up to 55 HRC

Advantage:
- Up to 100 % higher productivity
- Extremely high feed rates thanks to the special cutting edge geometry

Solid carbide mills for universal machining

ATORN Solid carbide 1-flute end mill

1 cutting edge, uncoated

Application:
For milling, plunging and contour milling NF metals and plastics.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in accordance with DIN 6535 HA
- Uncoated
- Clearance
- right-hand cutting
- Mirror finish

Advantage:
- Defined edge rounding for maximum service life
- Large chip area for optimum chip flow
- Ideal for NF metals and plastics

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ORION® Solid carbide 1-flute end mill

1 cutting edge, uncoated

Application:
For milling, recessing and contour milling of non-ferrous metals and plastics.

Execution:
- solid carbide ultra-fine grain
- straight shank in accordance with DIN 6535 HA
- sharp-edged
- uncoated
- right-hand cutting

Delivery:
Up to 3 mm diameter = 10 pieces

Notes:
Minimum order: up to 3.0 mm diameter = 10 pieces

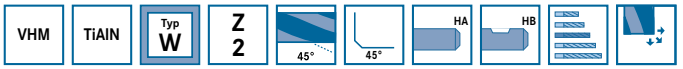
ORION® Solid carbide end mill

2 cutting edges, TiAlN-coated



No. 16732

No. 16733

Application:
Suitable for plunge milling, groove milling and fitting milling in non-ferrous metals.

Execution:
- Solid carbide ultra-fine grain
- TiAlN coated
- Centre cutting
- With edge protection chamfer
- **No. 16732:** Straight shank in accordance with DIN 6535 HA
- **No. 16733:** Straight shank in accordance with DIN 6535 HB

ATORN Solid carbide end mill

2 cutting edges, uncoated/ULTRA coated

No. 16727

No. 16728

Application:
Suitable for universal plunge milling, groove milling and fitting milling.

Execution:
- Solid carbide ultra-fine grain
- Straight shank, 3 mm diameter, to DIN 6535 HA
- Straight shank, from 6 mm diameter, to DIN 6535 HB
- Centre cutting
- With clearance
- **No. 16727:**
  - Radial grinding relief
  - Uncoated
- **No. 16727 001–16727 200, 16728 020–16728 200:** With edge protection chamfer
- **No. 16728:**
  - Radial relief
  - ULTRA coated
- **No. 16728 001–16728 018:** Without edge protection chamfer

Notes:
The undersize values are particularly suitable for cutting keyways, slightly conical ground for more accurately fitting grooves.

ORION® Solid carbide end mill

2 cutting edges, TiAlN-coated

VHM | TiAlN | Typ N | Z 2 | 30° | 45° | HA | HB

Application:
Suitable for universal plunge, groove and clearance milling.

Execution:
- **No. 16716:**
  - Solid carbide ultra-fine grain
  - TiAlN-coated
  - Centre cutting
  - With edge protection chamfer
  - Straight shank pursuant to DIN 6535 HA
- **No. 16717:**
  - solid carbide ultra-fine grain
  - TiAlN-coated
  - centre cutting
  - with edge protection chamfer
  - straight shank in line with DIN 6535 HB

Prod. Gr. 154

ORION® Solid carbide end mill

2 cutting edges, uncoated

Application:

Suitable for universal plunge milling, groove milling and fitting milling.

Execution:

- Solid carbide ultra-fine grain
- Straight shank in accordance with DIN 6535 HA
- Centre cutting
- Uncoated

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN Disposable solid carbide milling cutter

3 cutting edges, uncoated/ULTRA coated

VHM | ULTRA | Typ N | Z 3 | 30° | HB

No. 16760

No. 16763

Application:
For universal machining in all material groups. Regrinding this cutting mill is not economical. It is cheaper to use the tool down to the wear line and replace it with a new one.

Execution:
- Solid carbide ultra-fine grain
- Straight shank pursuant to DIN 6535 HB
- Centre cutting
- **No. 16760:** Uncoated
- **No. 16763:** ULTRA-coating for extremely high service life requirements

ATORN Solid carbide end mill

3 cutting edges, uncoated/ULTRA coated

VHM | ULTRA | Typ N | Z 3 | 30° | 45° | HB

No. 16787

No. 16788

Application:
End mill for universal use when plunge milling, groove milling and keyway cutting as well as face milling and peripheral milling.

Execution:
- solid carbide ultra-fine grain
- straight shank in accordance with DIN 6535 HB
- centre cutting
- radial relief
- with clearance
- **No. 16787:** uncoated
- **No. 16788:** ULTRA-coated

Notes:
The undersized dimensions are particularly suited for cutting keyways

ATORN Solid carbide HPC end mill

3 cutting edges, TiAlN-coated

VHM | TiAlN | Typ N | Z 3 | 41°/43°/45° | 45° | HA | HB | HPC

No. 16777

No. 16778

Application:
HPC end mill with unequal twist for roughing and finishing materials with a strength of up to 1400 N/mm²

Execution:
- Solid carbide ultra-fine grain
- TiAlN-coated
- Centre cutting
- With edge protection chamfer
- Unequal twist angle (41°, 43°, 45°)
- With clearance

- **No. 16777:** Straight shank pursuant to DIN 6535 HA
- **No. 16778:** Straight shank pursuant to DIN 6535 HB

Advantage:
- Extremely smooth running
- Reduces vibrations
- Enables higher feed rates and greater cutting depths
- Ideal for static and dynamic trochoidal milling
- Defined edge rounding for extremely long service life

Application:
Universal end mill for plunge, groove and slot milling as well as for face and circumferential milling.

Execution:
- solid carbide ultra-fine grain
- TiAlN-coated

- centre cutting with new point geometry
- with edge protection chamfer
- **No. 16781:** straight shank in line with DIN 6535 HB
- **No. 16784:** straight shank in line with DIN 6535 HA

ORION® Solid carbide end mill

3 cutting edges, uncoated

Application:

Universal end mill for plunge, groove and slot milling as well as for face and circumferential milling.

Execution:

- Solid carbide ultra-fine grain
- Straight shank pursuant to DIN 6535 HA
- Up to Ø 3 mm - 3-cutter, cutting to the centre
- From Ø 3.5 mm - centre cutting

Notes:

Minimum order quantity: up to diameter 3.0 mm = 10 pieces

ATORN Solid carbide end mill

3 cutting edges, uncoated/ULTRA coated

VHM | ULTRA | Typ N | Z 3 | 45° | 45° | HB

No. 16790

No. 16792

Application:
End mill for universal use when plunge milling, groove milling and keyway cutting as well as face milling and peripheral milling.

Execution:
- solid carbide ultra-fine grain
- straight shank in accordance with DIN 6535 HB
- centre cutting
- with clearance
- **No. 16790:**
  - without edge protection chamfer
  - uncoated
- **No. 16792:**
  - with edge protection chamfer
  - ULTRA-coated

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

Prod. Gr. 108

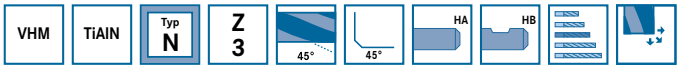
ORION® Solid carbide end mill

3 cutting edges, TiAlN-coated



No. 16797

No. 16799

Application:
Universal end mill for plunge, groove and slot milling as well as for face and circumferential milling.

Execution:
- solid carbide ultra-fine grain
- centre cutting with new point geometry
- with edge protection chamfer
- TiAlN-coated
- **No. 16797:** straight shank in line with DIN 6535 HA
- **No. 16799:** straight shank in line with DIN 6535 HB

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ORION® Solid carbide end mill

3 cutting edges, uncoated

VHM | Typ N | Z 3 | 45° | HA

Application:
End mill for universal use when plunge milling, groove milling and keyway cutting as well as face milling and peripheral milling.

Execution:
- solid carbide ultra-fine grain
- straight shank in accordance with DIN 6535 HA
- up to 3-mm diameter – 3 blades for centre cutting
- from 4-mm diameter – centre cutting

Notes:
Minimum order quantity: up to 3.0 mm diameter = 5 pieces

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plastics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ORION® Solid carbide end mill

4 cutting edges, TiAlN-coated

VHM | TiAlN | Typ H | Z 4 | 30° | HB

No. 16837

No. 16838

Application:
End mill for universal processing.

Execution:
- Solid carbide ultra-fine grain
- Up to Ø 5 mm straight shank in line with DIN 6535 HA
- From Ø 6 mm straight shank in line with DIN 6535 HB
- TiAlN-coated
- Centre cutting
- **No. 16837:**
  - Short version
  - Very high feed rates possible
- **No. 16838:** Long version

Prod. Gr. 150

ATORN Solid carbide end mill

4 cutting edges, ULTRA-coated

Application:
End/torus milling cutter for universal machining.

Execution:
- Solid carbide ultra-fine grain
- Up to Ø 6 mm straight shank pursuant to DIN 6535 HA
- From Ø 8 mm straight shank pursuant to DIN 6535 HB
- ULTRA-coated
- Centre cutting
- Ø 2-4 mm without clearance

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN Solid carbide HPC end mill/torus milling cutter

4 cutting edges, ULTRA-coated

Application:
Ident. No. 040–041, 050–051, 060–061, 080–081, 100–101, 120–121, 160–201: End/torus milling cutter for universal machining.
Ident. No. 042–043, 052–053, 062–063, 082–083, 103, 123, 203: Shank or torus milling cutter for universal machining.

Execution:
- Solid carbide ultra-fine grain
- Centre cutting
- ULTRA-coated
- Edge protection chamfer/edge radius
- **Ident. No. 040–041, 050–051, 060–061, 080–081, 100–101, 120–121, 160–201:**
  - Straight shank pursuant to DIN 6535 HA
  - Extra-long design without clearance
- **Ident. No. 042–043, 052–053, 062–063, 082–083, 103, 123, 203:**
  - Straight shank in accordance with DIN 6535 HA
  - Extra-long design with no clearance

Prod. Gr. 108

HPC drilling and plunge end mills
drilling and ramping with maximum performance

grooves
- very quiet operation and high process stability
- highest feeds during insertion and grooving
- undersize tools for precise fitting grooves

drilling
- very good drilling properties up to 2xD
- no separate pilot tool necessary

ramping
- insertion angle up to 45° possible
- optimum chip removal through special face geometry

rough machining
- high material removal rate due to HPC geometry
- can also be used on less powerful machines due to low power consumption

finishing
- contours with high surface quality
- HPC geometry ensures low-vibration milling

ORION®

optimised front chip spaces

ORION® SC HPC drilling and plunge end mills
4 cutting edges, AlTiN-coated

VHM | AlTiN | Typ N | Z 4 | 35°/38° | 45° | HA | HB | HPC

Application:
Ramping, grooving, drilling, roughing and finishing with high performance. The special face geometry enables e.g. ramp angles of up to 45°.

Execution:
- point geometry for ramping and drilling
- Solid carbide ultra-fine grain
- AlTiN-coated
- Centre cutting and clearance
- With 45° edge protection chamfer
- uneven twist angle

Prod. Gr. 150

ORION® Solid carbide HPC end mill

4 cutting edges, TiAlN-coated

VHM | TiAlN | Typ N | Z 4 | 35°/38° | 45° | HB | HPC

Application:
HPC end mill with unequal twist and uneven distribution for universal roughing and finishing.

Execution:
- Solid carbide ultra-fine grain
- Straight shank pursuant to DIN 6535 HB
- TiAlN-coated
- With clearance
- Unequal twist angle 35°/38°
- With edge protection chamfer
- Rounded cutting edge
- Centre cutting
- Unequal cutter pitch

Advantage:
- Roughing and finishing with just one tool
- Ideally suitable for trochoidal milling
- Enables higher feed rates and greater cutting depths

ORION® SC HPC end mill set

4 cutting edges, TiAlN-coated

Application:
HPC end mill with unequal twist and unequal pitch for universal rough machining and smoothing

Execution:
- Solid carbide ultra-fine grain, TiAlN-coated
- Straight shank in line with DIN 6535 HB
- Unequal twist angle of 35°/38°
- With edge protection chamfer
- Comprising individual tools 16853 208-216

ORION® Solid carbide HPC end mill UNI

4 cutting edges, AlCrN-coated

Application:
HPC end mill with uneven twist and uneven pitch for universal roughing and smoothing.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HB
- AlCrN coating
- Clearance
- unequal twist angle of 35°/38°
- With edge protection chamfer
- Rounded cutting edges
- Centre cutting
- unequal cutting edge pitch

Advantage:
- extremely quiet running
- Reduced vibration
- Higher feeds and cutting depths possible
- ideal for static and dynamic trochoidal milling
- Defined edge rounding for maximum service life

ORION® Solid carbide HPC end mill STAINLESS STEEL

4 cutting edges, AlCrN-coated

Application:
HPC end mill with uneven twist and uneven pitch for rough and finish machining of stainless steel.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HB
- AlCrN coating
- Clearance
- unequal twist angle of 40°/41°
- With edge protection chamfer
- Rounded cutting edges
- Centre cutting
- unequal cutting edge pitch

Advantage:
- extremely quiet running
- Reduced vibration
- Higher feeds and cutting depths possible
- ideal for static and dynamic trochoidal milling
- Defined edge rounding for maximum service life

ORION® Solid carbide HPC end mills

4 cutting edges, ULTRA-coated

VHM | ULTRA | Typ N | Z 4 | 35°/38° | 45° | HA | HB | HPC

Ident. No. 200–208, 212–220, 252

Application:
HPC end mill with uneven twist and uneven pitch for universal rough machining and smoothing.

Execution:
- Solid carbide ultra-fine grain
- Straight shank as per DIN 6535 HA and HB
- ULTRA-coated
- With clearance
- Uneven twist angle 35°/38°
- With edge protection chamfer
- Edge-rounded flutes
- Centre cutting
- Uneven flute pitch

Advantage:
- Extremely smooth running
- Reduced oscillation
- Higher feed rates and cutting depths possible
- Ideal for static and dynamic trochoidal milling
- Defined edge rounding for outstanding service life

ORION® Solid carbide HPC end mills

4 cutting edges, ULTRA PRO-coated

VHM | ULTRA PRO | Typ N | Z 4 | 35°/38° | 45° | HA | HB | HPC

Ident. No. 150–160

Ident. No. 161–179

Ident. No. 800–820

Ident. No. 830–850

Application:
Ident. No. 150–160: HPC end mill in long version with unequal twist and unequal pitch for universal roughing and finishing.
Ident. No. 161–179: HPC end mill in extra-long version with unequal twist and unequal pitch for universal roughing and finishing.
Ident. No. 800–850: HPC end mill in standard version with unequal twist and unequal pitch for universal roughing and finishing.

Execution:
- Solid carbide ultra-fine grain
- ULTRA PRO-coated
- with clearance
- unequal helix angle 35°/38°
- with edge protection chamfer
- Cutting edge rounding
- Centre cutting
- unequal cutting edge pitch
- **Ident. No. 150–179:** Straight shank in accordance with DIN 6535 HB
- **Ident. No. 800–850:** Straight shank as per DIN 6535 HA and HB

Advantage:
- extremely smooth running
- reduced vibration
- higher feed rates and cutting depths possible
- ideal for static and dynamic trochoidal milling
- defined edge rounding for maximum service life

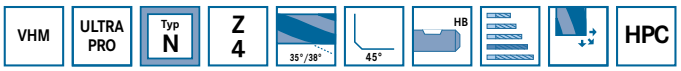
ORION® Solid carbide HPC end mills

4 cutting edges, ULTRA PRO-coated



Application:
HPC end mill with unequal twist and unequal pitch for universal roughing and finishing.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in accordance with DIN 6535 HB
- ULTRA PRO-coated
- with clearance
- unequal helix angle 35°/38°
- with edge protection chamfer
- Cutting edge rounding
- Centre cutting
- unequal cutting edge pitch
- Chip breaker on every cutting edge

Advantage:
- optimal suitability for trochoidal milling
- with chip breaker geometry for short chips
- HPC geometry for maximum feed rates and smooth running
- suitable for large cutting depths

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ORION® Solid carbide HPC end mills with internal cooling

4 cutting edges, ULTRA-coated

VHM | ULTRA PRO | Typ N | Z 4 | 35°/38° | 45° | HB | HPC | IK

Application:
HPC end mill with unequal twist and unequal pitch for universal roughing and finishing.

Execution:
- Solid carbide ultra-fine grain
- Straight shank as per DIN 6535 HA and HB
- ULTRA PRO-coated
- with clearance
- unequal helix angle 35°/38°
- with edge protection chamfer

- Cutting edge rounding
- Centre cutting
- unequal cutting edge pitch
- with internal cooling, 4-way, radial

Advantage:
- extremely smooth running
- reduced vibration
- higher feed rates and cutting depths possible
- ideal for static and dynamic trochoidal milling
- defined edge rounding for maximum service life

ORION® Solid carbide HPC end mills

4 cutting edges, AlCrN-coated

VHM | AlCrN | Typ VA | Z 4 | 35°/38° | 45° | HB | HPC

Ident. No. 503–520

Ident. No. 553–570

Application:
HPC end mill with uneven twist and uneven pitch for rough and finish machining of stainless steel.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HB
- AlCrN coating
- Clearance
- Unequal twist angle of 35°/38°
- With edge protection chamfer

- Rounded cutting edges
- Centre cutting
- Unequal cutting edge pitch

Advantage:
- extremely quiet running
- Reduced vibration
- Higher feeds and cutting depths possible
- Ideal for static and dynamic trochoidal milling
- Defined edge rounding for maximum service life

ORION® Solid carbide finishing end mills

6 cutting edges, ULTRA PRO-coated

VHM | ULTRA PRO | Typ N | Z 6 | 35°/38° | HA | HPC

Application:
Highly accurate finishing cutter with unequal twist and unequal pitch for universal finishing.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- ULTRA PRO-coated
- with clearance
- unequal helix angle 48°/50°

- Cutting edge rounding
- unequal cutting edge pitch
- with face cutting edge correction
- Taper of max. 0.005 mm

Advantage:
- extremely smooth running
- reduced vibration
- higher feed rates and cutting depths possible
- high angular accuracy and plane parallelism

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ORION® Solid carbide HPC roughing and finishing end mills

4 cutting edges, ULTRA PRO-coated

VHM | ULTRA PRO | Typ NRF | Z 4 | 35°/38° | 45° | HB | HPC

Application:
HPC roughing and finishing cutter for universal machining.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in accordance with DIN 6535 HB
- ULTRA PRO-coated
- unequal helix angle 35°/38°
- unequal cutting edge pitch
- with clearance
- with edge protection chamfer
- with round knuckle profile

Advantage:
- extremely smooth running
- reduced vibration
- higher feed rates and cutting depths possible

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ORION® SC roughing cutter

4-6 cutting edges, TiAlN coated

VHM | TiAlN | Typ HR | Z 4 | Z 5 | Z 6 | 45° | 45° | HB

Application:
For rough cutting at high feed rates and with rigid clamping, up to Vc 160 m/min possible

Execution:
- Solid carbide ultra-fine grain
- Straight shank in accordance with DIN 6535 HB
- TiAlN-coated
- Centre cutting

ATORN SC multi-flute end mills

6-8 cutting edges, ULTRA coated

VHM | ULTRA | Typ VA | Z 6 | Z 8 | 45° | 45° | HB

Application:
For circumferential milling as a finishing process to create a high surface quality. Face cut only with shallow cutting depths.

Execution:
- Solid carbide ultra-fine grain
- Straight shank pursuant to DIN 6535 HB
- ULTRA-coated
- Centre cutting
- With clearance

Prod. Gr. 108

ORION® SC multi-flute end mills

6 cutting edges, TiAlN-coated

Application:
For circumferential milling as a finishing process to create a high surface quality. Face cut only with shallow cutting depths.

Execution:
- solid carbide ultra-fine grain
- straight shank in line with DIN 6535 HB
- TiAlN-coated
- **No. 16876:** Standard version
- **No. 16881:** Long version

No. 16876

No. 16881

ORION® SC multi-flute end mills

6-8 cutting edges, TiAlN coated

VHM | TiAlN | Typ H | Z 6 | Z 8 | 50° | HA

Ident. No. 040–050, 060, 080, 100, 120, 160, 200

Ident. No. 051, 061, 081, 101, 121, 161, 201–251

Application:
HSC milling also for dry machining, for machining up to 64 HRC

Execution:
- Solid carbide ultra-fine grain
- Straight shank pursuant to DIN 6535 HA
- TiAlN-coated
- Without centre cutting

ORION® Solid carbide HPC torus milling cutters

4 cutting edges, ULTRA PRO-coated

VHM | ULTRA PRO | Typ N | Z 4 | 35°/38° | HB | HPC

Ident. No. 620–656

Ident. No. 660–703

Application:

Ident. No. 620–656: HPC torus milling cutter with unequal pitch for universal roughing and finishing.

Ident. No. 660–703: HPC torus milling cutter in extra-long version with unequal pitch for universal roughing and finishing.

Execution:

- Solid carbide ultra-fine grain
- Straight shank in accordance with DIN 6535 HB
- ULTRA PRO-coated
- with clearance
- unequal helix angle 35°/38°
- Cutting edge rounding
- Centre cutting
- unequal cutting edge pitch

Advantage:

- extremely smooth running
- reduced vibration
- higher feed rates and cutting depths possible
- ideal for static and dynamic trochoidal milling
- defined edge rounding for maximum service life

ATORN Solid carbide HPC torus milling cutter

4 cutting edges, ULTRA-coated

VHM | ULTRA | Typ N | Z 4 | 30° | HB | HPC

Application:
HPC torus milling cutter with uneven pitch for universal rough machining and smoothing.

Execution:
- Solid carbide ultra-fine grain

- Straight shank in accordance with DIN 6535 HB
- ULTRA-coated
- Centre cutting
- Unequal cutting pitch

ORION® SC torus milling cutter

3-4 cutting edges, TiAlN coated

Application:
Torus milling cutter for universal machining.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in accordance with DIN 6535 HA
- TiAlN-coated
- 3-4 cutters
- Centre cutting
- Edge radius
- Chip chamber lowered from the face over the length of the diameter

ORION® Solid carbide miniature ball nose end mill

2 cutting edges, uncoated

VHM | Typ N | Z 2 | 30° | HA

Application:
Miniature radius milling cutter in a short, stable design for universal machining.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in accordance with DIN 6535 HA
- With clearance
- Cutter tolerance: +/- 0.02 mm

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

Trochoidal milling

TVC = Trochoidal Volume Cutting
this milling strategy creates smarter and more efficient tool paths, especially when rough machining. this means that more material can be removed in a shorter time – without any loss of quality. overlapping a circular path on the feed movement has a positive influence on contact conditions. reducing stepover while at the same time utilising the entire cutting length results in the process forces being significantly reduced.

Advantages:
- Cutting depths of 3 to 5xD can be achieved without any problem
- Optimised and controlled tool engagement
- Almost constant engagement angle (max. 70°) and average chip thickness
- Reduced stress on the tool/spindle/bearings
- Extremely aggressive cutting parameters can be selected

Static:
Only grooves are milled. The tool paths consist exclusively of circular tool paths.

Dynamic:
Free workpiece contours are milled. The tool paths consist of circular and straight tool paths. The circular paths may in some cases include very large radii or linear movements.

ATORN Solid carbide TVC end mill “trochoidal” - STEEL

4-5 cutting edges, ULTRA coated

Ident. No. 002–012

Ident. No. 020–028

Application:
The TVC end mills are optimally suited for processing with modern milling strategies. Cutting edge lengths of 3-5xD, reinforced cores and specially developed chip breaker geometries allow high working depths with maximum process reliability.

Execution:
- solid carbide ultra-fine grain
- straight shank in line with DIN 6535 HB
- ULTRA-coated
- centre cutting and edge protection chamfer
- special chip breakers for short chips
- uneven twist angle
- **Ident. No. 002–012:** 3xD design with clearance

ATORN Solid carbide TVC end mill

3 cutting edges, ULTRA N PRO-coated

VHM | ULTRA N PRO | Typ W | Z 3 | 45° | 45° | HA | HB

Application:
The TVC end mills are optimally suited for processing with modern milling strategies. Cutting edge lengths of 3.5xD, reinforced cores and specially developed chip breaker geometries allow high working depths with maximum process reliability.

Execution:
- solid carbide ultra-fine grain
- straight shank in line with DIN 6535 HB
- ULTRA-N PRO-coated
- with edge protection chamfer
- Defined edge rounding of the cutting edge
- centre cutting
- Polish sanding

Advantage:
- Ultra-smooth coating thickness
- Excellent chip removal
- defined edge rounding for maximum service life
- Large chip area for optimum chip flow
- Ideal for NF metals and plastics

Solid carbide mills for machining aluminium

ATORN Solid carbide 1-flute end mill

1 cutting edge, uncoated

Application:
For milling, plunging and contour milling NF metals and plastics.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in accordance with DIN 6535 HA
- Uncoated
- Clearance
- right-hand cutting
- Mirror finish

Advantage:
- Defined edge rounding for maximum service life
- Large chip area for optimum chip flow
- Ideal for NF metals and plastics

ORION® Solid carbide 1-flute end mill

1 cutting edge, uncoated

Application:
For milling, recessing and contour milling of non-ferrous metals and plastics.

Execution:
- solid carbide ultra-fine grain
- straight shank in accordance with DIN 6535 HA
- sharp-edged
- uncoated
- right-hand cutting

Delivery:
Up to 3 mm diameter = 10 pieces

Notes:
Minimum order: up to 3.0 mm diameter = 10 pieces

ATORN Solid carbide end mill

2 cutting edges, ULTRA N PRO-coated

Application:
For dive, groove and keyway milling as well as helical and circumferential milling in all non-ferrous metals and plastics.

Execution:
- Solid carbide ultra-fine grain
- straight shank in line with DIN 6535 HB
- ULTRA-N PRO-coated
- with edge protection chamfer
- Defined edge rounding of the cutting edge
- centre cutting
- with clearance
- Polish sanding

Advantage:
- Ultra-smooth coating thickness
- Excellent chip removal
- defined edge rounding for maximum service life
- Large chip area for optimum chip flow
- Ideal for NF metals and plastics

ATORN Solid carbide end mill with internal cooling

3 cutting edges, uncoated

VHM | Typ W | Z 3 | 40° | HA | IK

Application:

End mill with uneven pitch for roughing and finishing of non-ferrous metals with maximum machining performance.

Execution:

- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- With chip breakers on the front
- Defined edge rounding of the cutting edge
- centre cutting

- With edge protection radius
- Polish sanding
- with internal cooling

Advantage:

- High material removal rate
- Uneven pitch reduces vibrations
- Corner radius increases the service life
- High-gloss polished cutting edges for better chip removal
- Ideal for NF metals and plastics

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plastics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN SC HPC end mill

3 cutting edges, ULTRA N PRO-coated

VHM | ULTRA N PRO | Typ W | Z 3 | 45° | 45° | HA | HB | HPC

Application:
HPC end mill with variable pitch for roughing and finishing non-ferrous metals with maximum results.

Execution:
- Solid carbide ultra-fine grain
- straight shank in line with DIN 6535 HB
- ULTRA-N PRO-coated
- with edge protection chamfer
- Defined edge rounding of the cutting edge
- centre cutting
- with clearance
- Polish sanding

Advantage:
- Ultra-smooth coating thickness
- Excellent chip removal
- defined edge rounding for maximum service life
- Large chip area for optimum chip flow
- Ideal for NF metals and plastics

ATORN Solid carbide torus roughing cutter with internal cooling

3 cutting edges, uncoated

VHM | Typ WF | Z 3 | 40° | HA | IK

Application:
Suitable for rough cutting with outstanding material removal rates on NF metals.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- Defined edge rounding of the cutting edge
- centre cutting
- Radius tolerance = +/- 0.01 mm
- Clearance
- Internal cooling

Advantage:
- High material removal rate
- Uneven pitch reduces vibrations
- Corner radius increases the service life
- Large chip area for optimum chip flow

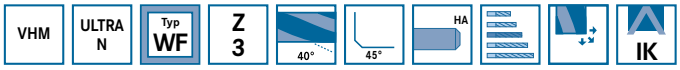
ATORN Solid carbide roughing cutter with internal cooling

3 cutting edges, ULTRA N-coated



Application:
Suitable for rough cutting with outstanding material removal rates on NF metals.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in accordance with DIN 6535 HA
- With edge protection chamfer
- Defined edge rounding of cutter
- Centre cutting
- With clearance
- ZrCN ULTRA N-coated
- With internal cooling

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plastics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN Solid carbide roughing cutter

3 cutting edges, ULTRA N PRO-coated

Application:
Suitable for rough cutting with outstanding material removal rates on NF metals.

Execution:
- Solid carbide ultra-fine grain
- straight shank in line with DIN 6535 HB
- ULTRA-N PRO coated
- with edge protection chamfer
- Defined edge rounding of the cutting edge
- centre cutting
- Clearance
- Polish sanding

Advantage:
- Ultra-smooth coating
- Excellent chip removal
- defined edge rounding for maximum service life
- Large chip area for optimum chip flow
- Ideal for NF metals and plastics

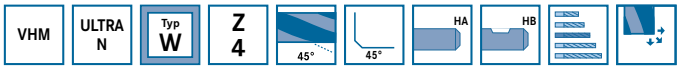
ATORN Solid carbide end mill

4 cutting edges, ULTRA N-coated



Ident. No. 500–508

Ident. No. 510–518

Application:
End mill for universal machining of non-ferrous metals.

Execution:
- solid carbide ultra-fine grain
- with edge protection chamfer
- defined edge rounding of the cutting edge
- centre cutting
- with clearance
- ZrCN ULTRA-N coated
- **Ident. No. 500–508:** straight shank in accordance with DIN 6535 HA

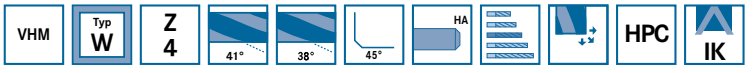
ATORN Solid carbide HPC end mill with internal cooling

4 cutting edges, uncoated



Application:
HPC end mill with uneven twist and uneven pitch for roughing and finishing of non-ferrous metals with maximum machining performance.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- With chip breakers on the front
- Defined edge rounding of the cutting edge
- centre cutting
- with edge protection chamfer
- Clearance
- Polish sanding
- Internal cooling

Advantage:
- Chip breakers on the front provide short chips when processing long-chipping materials
- High material removal rate
- Uneven pitch and twist reduces vibrations
- High-gloss polished cutting edges for better chip removal
- Ideal for NF metals and plastics

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.	
	<700	<1000	<1300	marten.	austen.	short	long	short	long	short	long							<55 HRC	<65 HRC

ATORN Solid carbide HPC end mill with internal cooling

4 cutting edges, uncoated

VHM | Typ W | Z 4 | 41° | 38° | 45° | HA | HPC | IK

Application:
HPC end mill with variable pitch and variable twist for roughing and finishing non-ferrous metals with maximum results.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- With chip breakers on the front and periphery
- Defined edge rounding of the cutting edge
- centre cutting
- with edge protection chamfer
- with clearance
- Polish sanding
- with internal cooling

Advantage:
- Chip breakers on the front and periphery provide short chips when processing long-chipping materials
- High material removal rate
- Variable pitch and swirl reduces vibration
- High-gloss polished cutting edges for better chip removal
- Ideal for NF metals and plastics

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN Solid carbide HPC end mill

4 cutting edges, ULTRA N-coated

VHM | ULTRA N | Typ W | Z 4 | 35°/38° | 45° | HA | HPC

Application:
HPC end mill with uneven twist and uneven pitch for rough and finish machining of non-ferrous metals.

Execution:
- solid carbide ultra-fine grain
- straight shank in accordance with DIN 6535 HA
- with edge protection chamfer
- defined edge rounding of the cutting edge
- centre cutting
- with clearance
- uneven 35°/38° twist angle
- ZrCN ULTRA-N coated

Advantage:
- extremely quiet running
- reduces vibrations
- higher feeds and cutting depths possible
- ideal for static and dynamic trochoidal milling
- defined edge rounding for maximum service life

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

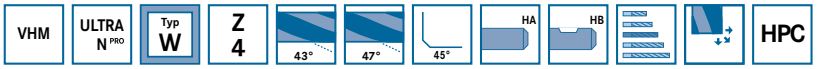
ATORN SC HPC end mill

4 cutting edges, ULTRA N PRO-coated



Application:
HPC end mill with variable pitch and variable twist for roughing and finishing non-ferrous metals with maximum results.

Execution:
- solid carbide ultra-fine grain
- straight shank in line with DIN 6535 HB
- ULTRA-N PRO-coated
- with edge protection chamfer
- Defined edge rounding of the cutting edge
- centre cutting
- with clearance
- Polish sanding

Advantage:
- Ultra-smooth coating thickness
- Excellent chip removal
- defined edge rounding for maximum service life
- Large chip area for optimum chip flow
- Ideal for NF metals and plastics

ATORN SC torus milling cutter

2 cutting edges, ULTRA N-coated

VHM | ULTRA N | Typ W | Z 2 | 30° | HA

Application:
Torus milling cutter, standard version for machining non-ferrous metals.

Execution:
- Solid carbide ultra-fine grain

- Straight shank in accordance with DIN 6535 HA
- Defined edge rounding of the blade
- Centre cutting
- With clearance
- ZrCN ULTRA N-coated
- Radius tolerance = +/- 0.01 mm

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plastics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN SC torus milling cutter

2 cutting edges, ULTRA N PRO-coated

VHM | ULTRA N PRO | Typ W | Z 2 | 30° | HA

Application:
Torus milling cutter, standard version for machining non-ferrous metals.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- ULTRA-N PRO-coated
- Radius tolerance = +/- 0.01 mm
- Defined edge rounding of the cutting edge
- centre cutting
- with clearance

Advantage:
- Ultra-smooth coating thickness
- Excellent chip removal
- defined edge rounding for maximum service life
- Large chip area for optimum chip flow
- Ideal for NF metals and plastics

ATORN Solid carbide HPC torus milling cutter

3 cutting edges, ULTRA N-coated

Ident. No. 520–580
HA shank

Ident. No. 620–680

Application:
HPC torus milling cutter for roughing and finishing non-ferrous metals.

Execution:
- Solid carbide ultra-fine grain
- Defined edge rounding of the blade
- Radius tolerance = +/- 0.01 mm
- Centre cutting
- With clearance
- ZrCN ULTRA N-coated
- **Ident. No. 520–580:** Straight shank in accordance with DIN 6535 HA
- **Ident. No. 620–680:** Straight shank in accordance with DIN 6535 HB

Advantage:
- Higher feed rates and cutting depths possible
- Defined edge rounding for outstanding service life

ATORN Solid carbide HPC / TVC torus milling cutter

3 cutting edges, ULTRA N PRO-coated

Application:
HPC/TVC torus milling cutter with uneven pitch for roughing and finishing of non-ferrous metals with maximum machining performance.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- ULTRA-N PRO-coated
- Radius tolerance = +/- 0.01 mm
- Defined edge rounding of the cutting edge
- centre cutting
- with clearance

Advantage:
- Ultra-smooth coating thickness
- Excellent chip removal
- defined edge rounding for maximum service life
- Large chip area for optimum chip flow
- Ideal for NF metals and plastics

ATORN SC 3D roughing cutter

3 cutting edges, CALIDA Z coated

VHM | CALIDA | Typ WF | Z 3 | 7° | HA | HSC | HPC

Application:
For high-performance milling in aluminium with cutting values up to 1600 m/min.

Execution:
- Solid carbide ultra-fine grain
- HA straight shank
- With clearance
- CALIDA Z high-performance coating (ZrCrN titanium-free)
- Defined cutting edge rounding
- Centre cutting
- Reinforced core
- Flat 7° twist

Advantage:
- Extremely stable high-performance geometry
- Chip breaker for machining short chips
- Fast and reliable chip removal
- Also for long-chipping materials
- Wear protection through corner radius (torus)

Notes:
The tools should be shrunk-in. A stable machine and firmly clamped parts are important.

ATORN Solid carbide HPC torus milling cutter with internal cooling

4 cutting edges, uncoated

VHM | Typ W | Z 4 | 41° | 38° | HA | HPC | IK

Application:
HPC torus milling cutter with uneven pitch for roughing and finishing of non-ferrous metals with maximum machining performance.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- With chip breaker on the end
- Defined edge rounding of the cutting edge
- centre cutting
- Radius tolerance = +/- 0.01 mm
- Clearance
- Polish sanding
- Internal cooling

Advantage:
- Chip breakers on the end ensure short chips for long-chipping materials
- High material removal rate
- Uneven pitch and twist reduces vibrations
- High-gloss polished cutting edges for better chip removal
- Ideal for NF metals and plastics

Prod. Gr. 1HJ

ATORN Solid carbide HPC torus milling cutter with internal cooling

4 cutting edges, uncoated

Application:
HPC torus milling cutter with uneven pitch for roughing and finishing of non-ferrous metals with maximum machining performance.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- With chip breaker on the end and at circumference
- Defined edge rounding of the cutting edge
- centre cutting
- Radius tolerance = +/- 0.01 mm
- with clearance
- Polish sanding
- with internal cooling

Advantage:
- Chip breakers on the end and at circumference ensure short chips for long-chipping materials
- High material removal rate
- Uneven pitch and twist reduces vibrations
- High-gloss polished cutting edges for better chip removal
- Ideal for NF metals and plastics

Solid carbide milling cutter, plastic processing

ATORN Solid carbide HSC 1-flute end mill - hard plastics

1 cutting edge, uncoated

VHM | Z 1 | 30° | HA | HSC

Ident. No. 010–120
Left-hand spiral

Ident. No. 200–310
Right-hand twist

Application:
For the milling, grooving and contour milling of high-performance plastics.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- Uncoated
- Surface polished
- With centre cutting
- For hard high-performance plastics such as Duroplast: Bakelite, melamine, MF, MPF, etc.

- **Ident. No. 010–120:** DownCut
- **Ident. No. 200–310:** UpCut

Advantage:
- Ideal for sheet metal, boards and thin-walled materials
- Large chip space for easy chip removal

Notes:
You can find detailed information on the usage value of this tool on our online shop.

ATORN Solid carbide HSC 1-flute end mill - soft plastics

1 cutting edge, uncoated

VHM | Z 1 | 30° | HA | HSC

Ident. No. 400–490, 510

Ident. No. 600–690, 710

Application:
For the milling, grooving and contour milling of standard plastics.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- Uncoated
- Surface polished
- With centre cutting
- For soft standard plastics like thermoplastics PVC, PE, PP, etc.

- **Ident. No. 400–510:** DownCut
- **Ident. No. 600–710:** UpCut

Advantage:
- Ideal for sheet metal, boards and thin-walled materials
- Large chip space for easy chip removal

ATORN Solid carbide HSC 1-flute end mill - straight-grooved

1 cutting edge, uncoated

Application:
For milling, recessing and contour milling of light alloys and plastics.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- uncoated
- Surface polished
- Straight grooved with centre cutting

Advantage:
- Ideal for sheet metal, boards and thin-walled materials
- No tensile forces on workpiece
- Large chip space for easy chip removal

Notes:

Application:
For milling, recessing and contour milling of light alloys and plastics.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- uncoated
- Surface polished
- For soft standard plastics like thermoplastics PVC, PE, PP, etc.
- With centre cutting
- **Ident. No. 010–100:** Right cutting with right-hand spiral
- **Ident. No. 200–300:** Right cutting with left-hand spiral

Advantage:
- Ideal for sheet metal, boards and thin-walled materials
- Extremely sharp cutting edges
- Large chip space for easy chip removal
- **Ident. No. 200–300:** Chip ejection downwards

Notes:
You can find detailed information on the usage value of this tool on our online shop.

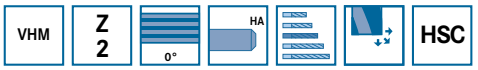
ATORN Solid carbide HSC end mill - straight-grooved

2 cutting edges, uncoated



Ident. No. 400–430, 450

Ident. No. 500–530, 550

Application:

Ident. No. 400–450: For the milling, grooving and contour milling of standard plastics.

Ident. No. 500–550: For the milling, grooving and contour milling of high-performance plastics.

Execution:

- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- Uncoated
- Surface polished
- Straight grooved with centre cutting
- **Ident. No. 400–450:** For soft standard plastics like thermoplastics PVC, PE, PP, etc.
- **Ident. No. 500–550:** For hard high-performance plastics such as Duroplast: Bakelite, melamine, MF, MPF, etc.

Notes:

ATORN Solid carbide face milling cutter

3 cutting edges, uncoated

Application:

For face milling of larger surfaces in light alloys and plastics.

Execution:

- Steel shank with soldered-on cemented carbide head
- Straight shank in accordance with DIN 6535 HA
- uncoated
- Without centre cutting

Notes:

Solid carbide mills for machining stainless steel

ATORN Solid carbide end mill

3 cutting edges, ULTRA MS coated

VHM | ULTRA MS | Typ VA | Z 3 | 40° | HA | HB

Application:
End mill for machining stainless steel, titanium alloy, nickel and copper alloys.

Execution:
- ultra-fine grain cemented carbide
- with clearance
- high-performance ULTRA MS layer
- defined cutting edge rounding

- centre cutting
- **Ident. No. 150–166:** HB straight shank
- **Ident. No. 170–186:** HA straight shank

Advantage:
- optimised, positive cutting geometry
- optimum chip removal and temperature resistance
- maximum service life thanks to ULTRA MS coating

Ident. No. 150–166

Ident. No. 170–186

ATORN Solid carbide HPC end mill

4 cutting edges, ULTRA MS coated

VHM | ULTRA MS | Typ VA | Z 4 | 35°/38° | 45° | HA | HB | HPC

Ident. No. 260–274

Ident. No. 276–290

Application:
HPC end mill with uneven helical and uneven pitch for rough machining and finish machining of stainless steel, titanium alloy, nickel and copper alloys. The uneven helical pitch means that vibrations on the tool are reduced, which results in outstanding finished surfaces, while, at the same time, feed rates and cutting depths can be increased.

Execution:
- ultra-fine grain cemented carbide
- with uneven helical and cutter distribution (35/38°)
- with clearance
- high-performance ULTRA MS layer
- with edge protection chamfer
- defined cutting edge rounding
- centre cutting
- **Ident. No. 260–274:** HB straight shank
- **Ident. No. 276–290:** HA straight shank

Advantage:
- rough machining and finishing with just one tool
- optimum suitability for trochoidal milling
- HPC geometry for maximum feed rates and running smoothness
- suitable for large cutting depths

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN Solid carbide HPC end mill

5 cutting edges, ULTRA MS coated

Application:
HPC end mill with uneven helical and uneven pitch for rough machining and finish machining of stainless steel, titanium alloy, nickel and copper alloys. The uneven helical pitch means that vibrations on the tool are reduced, which results in outstanding finished surfaces, while, at the same time, feed rates and cutting depths can be increased.

Execution:
- ultra-fine grain cemented carbide
- with uneven helical (35/38°)
- with reinforced core
- with clearance
- high-performance ULTRA MS layer
- with edge protection chamfer
- defined cutting edge rounding
- centre cutting
- **Ident. No. 340–347:** HB straight shank
- **Ident. No. 350–357:** HA straight shank

Advantage:
- optimum suitability for trochoidal milling
- HPC geometry for maximum feed rates and running smoothness
- suitable for large cutting depths

ATORN SC roughing cutter

4 cutting edges, ULTRA MS-coated

VHM | ULTRA MS | Typ VA | Z 4 | 40° | 45° | HB

Application:
Roughing cutter with unequal cutting pitch for machining stainless steels and titanium/Ni/Co alloys.

Execution:
- Ultra-fine grain cemented carbide
- HB straight shank
- With clearance
- ULTRA MS high-performance coating
- With edge protection chamfer
- Defined cutting edge rounding
- Centre cutting

Advantage:
- High-performance roughing
- Optimised, positive cutting geometry
- Excellent chip removal and temperature resistance
- Maximum service life thanks to ULTRA MS coating

ATORN Solid carbide HPC torus milling cutter

4 cutting edges, ULTRA MS-coated

VHM | ULTRA MS | Typ VA | Z 4 | 35°/38° | HA | HB | HPC

Ident. No. 150–204

Ident. No. 210–264

Application:
HPC torus milling cutter with an unequal twist and unequal pitch for smoothing and rough machining stainless steels and titanium, Ni and Co alloys. The unequal twist angle prevents vibration on the tool, thereby ensuring excellent finishing surfaces as well as higher feed rates and greater cutting depths.

Execution:
- Ultra-fine grain cemented carbide
- With clearance
- ULTRA MS high-performance coating
- Defined cutting edge rounding
- Centre cutting
- **Ident. No. 150–204:** HB straight shank
- **Ident. No. 210–264:** HA straight shank

Advantage:
- Rough machining and smoothing with a single tool
- Ideal for trochoidal milling
- HPC geometry for optimum feed rates and running smoothness
- Suitable for large cutting depths

Prod. Gr. 1HJ

ATORN Solid carbide ball nose end mill

2 cutting edges, ULTRA MS coated

Application:
Radius milling cutter for machining stainless steel, titanium, Ni and Co alloys.

Execution:
- Ultra-fine grain cemented carbide
- Radius tolerance = 0/-0.010 mm
- Reinforced core
- With clearance

- ULTRA MS high-performance coating
- Defined cutting edge rounding
- **Ident. No. 140–156:** HB straight shank
- **Ident. No. 170–186:** HA straight shank

Advantage:
- Optimised, positive cutting geometry
- Excellent chip removal and temperature resistance
- Maximum service life thanks to ULTRA MS coating

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

Solid carbide barrel milling cutter

ATORN Solid carbide barrel milling cutter, tangential

4 cutting edges, uncoated/ULTRA coated

VHM | ULTRA | Typ N | Z 4 | 15° | HA | HSC

Application:
Barrel milling cutters revolutionise finishing on 5-axis milling machines. Due to the larger radii, you can achieve significantly higher infeeds with improved surfaces.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- Tangential design
- Forming tolerance of +/-0.01
- Defined edge rounding
- **Ident. No. 100–120:** ULTRA coated
- **Ident. No. 200–220:** Uncoated

Advantage:
- Suitable for easily accessible edges
- Reduced machining times thanks to large line skips
- Highly economical
- Improved surfaces thanks to large radii

Ident. No. 100–120

Ident. No. 200–220

ATORN Solid carbide barrel milling cutter, conical

4 cutting edges, uncoated/ULTRA coated

VHM | ULTRA | Typ N | Z 4 | 15° | HA | HSC

Application:
Barrel milling cutters revolutionise finishing on 5-axis milling machines. Due to the larger radii, you can achieve significantly higher infeeds with improved surfaces.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in line with DIN 6535 HA
- Conical design
- Forming tolerance of +/-0.01
- Defined edge rounding
- α/2 is the recommended angle to the surface
- **Ident. No. 500–550:** ULTRA coated
- **Ident. No. 600–650:** Uncoated

Advantage:
- Suitable for deep cavities and steep areas
- Reduced machining times thanks to large line skips
- Highly economical
- Improved surfaces thanks to large radii

Solid carbide mills for machining steel up to 52 HRC

ATORN Solid carbide end mill

4 cutters, RockTec-52-coated

Application:
End mill in a standard design for machining materials up to 52 HRC, e.g. in dip working and mould forming.

Execution:
- Solid carbide ultra-fine grain
- Cutting edge finish
- HA shank pursuant to DIN 6535
- With clearance
- Type N
- Chip angle 3°
- RockTec 52-coated

Advantage:

ATORN Solid carbide miniature torus milling cutter

4 cutters, RockTec-52-coated

Application:
Miniature torus milling cutter with a long neck for machining materials up to 52 HRC, e.g. in dip cutting and mould construction.

Execution:
- Solid carbide ultra-fine grain
- HA shaft pursuant to DIN 6535
- cutting edge finish
- with clearance
- 0° chip angle
- Radius tolerance = 0/-0.010 mm
- RockTec 52 coated
- Radius tolerance = 0/-0.010 mm

Advantage:
- optimum chip removal and temperature resistance
- maximum service life thanks to RockTec 52 coating

ATORN SC torus milling cutter

4 cutters, RockTec-52-coated

VHM | RockTec 52 | Typ N | Z 4 | 40° | HA

Application:
Torus milling cutter for universal machining of materials up to 52 HRC, e.g. for countersinking and mould making.

Execution:
- solid carbide ultra-fine grain
- cutting edge finish
- HA shank in accordance with DIN 6535
- with clearance

- type N
- 3° chip angle
- RockTec 52 coated
- radius tolerance = 0/-0.010 mm

Advantage:
- optimum chip removal and temperature resistance
- maximum service life thanks to RockTec 52 coating

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN Solid carbide HSC high-feed milling cutter

4 cutting edges, RockTec 65-coated

Application:
High-feed milling cutter (HSC) with short blade for processing materials up to 65 HRC. Applications in die and mould making and general mechanical engineering.

Execution:
- Solid carbide ultra-fine grain
- HA shank in line with DIN 6535
- Cutting edge finish
- Centre cutting

- Type H
- Chip angle -1°
- Twist angle 3°
- RockTec 65-coated

Advantage:
- High material removal rate, high surface quality
- High feeds of 0.2-0.5 mm per tooth possible
- Good dimensional and geometric accuracy
- RockTec 65 coating for maximum service life

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN Solid carbide ball nose end mill

2 cutting edges, RockTec 52-coated

VHM | RockTec 52 | Typ N | Z 2 | 30° | HA

Application:
Radius cutter in standard design for machining materials up to 52 HRC, e.g. in die and mould making.

Execution:
- Solid carbide ultra-fine grain
- Cutting edge finish
- HA shank in accordance with DIN 6535
- With clearance

- Type N
- Chip angle 3°
- RockTec 52-coated
- Radius tolerance = 0/-0.010 mm

Advantage:

Prod. Gr. 1HJ

ATORN Solid carbide ball nose end mill

4 cutters, RockTec-52-coated

VHM | RockTec 52 | Typ N | Z 4 | 30° | HA

Application:
Radius cutter in standard design for machining materials up to 52 HRC, e.g. in die and mould making.

Execution:
- solid carbide ultra-fine grain
- cutting edge finish
- HA shank in accordance with DIN 6535
- with clearance

- type N
- 3° chip angle
- RockTec 52-coated
- radius tolerance = 0/-0.010 mm

Advantage:
- optimum chip removal and temperature resistance
- maximum service life thanks to RockTec 52 coating

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plastics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

Solid carbide mills for machining steel up to 65 HRC

ATORN Solid carbide end mill

4 cutting edges, RockTec 65-coated

Application:
End mill in a standard design for machining materials up to 65 HRC, e.g. dip cutting and mould construction.

Execution:
- Solid carbide ultra-fine grain
- Cutting edge finish
- HA shank in accordance with DIN 6535

- With clearance
- Type H
- Chip angle -6°
- RockTec 65-coated

Advantage:

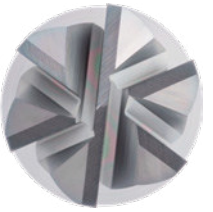
ORION® Solid carbide HPC multi-flute end mills

4-10 cutting edges, TiAlN coated

VHM | TiSiN | Typ H | Z 10 | Z 4 | Z 6 | Z 8 | 45° | HA | HPC

Ident. No. 103–118, 124–130



Application:
Multi-tooth mill for circumferential machining, fine finishing and semi-roughing up to 68 HRC.

Execution:
- solid carbide ultra-fine grain
- TiSiN-coated
- Unequal twist angle
- HA shaft in line with DIN 6535
- type H
- 0° chip angle
- cutting edge finish
- centre cutting

Advantage:
- optimum chip removal and temperature resistance
- Maximum service life deu to TiSiN coating

Notes:
At >60 HRC: ae = 0.07xD. Face cut from Z6 is only possible to a limited extent.

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN Solid carbide miniature torus milling cutter

4 cutting edges, RockTec 65-coated

VHM | RockTec 65 | Typ H | Z 4 | 25° | HA

Application:
Torus milling cutter with long neck for machining materials up to 65 HRC, e.g. for countersinking and mould making.

Execution:
- Solid carbide ultra-fine grain
- HA shaft pursuant to DIN 6535
- cutting edge finish
- with clearance
- type H
- 0° chip angle
- RockTec 65-coated
- Radius tolerance = 0/-0.010 mm

Advantage:
- optimum chip removal and temperature resistance
- RockTec 65 coating for maximum service life

Prod. Gr. 1HK

ATORN SC torus milling cutter

4 cutting edges, RockTec 65-coated

Application:
Torus milling cutter for processing materials up to 65 HRC, e.g. for die and mould making.

Execution:
- Solid carbide ultra-fine grain
- Cutting edge finish
- HA shank in line with DIN 6535
- With clearance

- Type H
- Chip angle -5° -7°
- RockTec 65-coated
- Radius tolerance = 0/-0.010 mm

Advantage:
- Best chip removal and temperature resistance
- RockTec 65 coating for maximum service life

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN Solid carbide HSC high-feed milling cutter

4-6 cutting edges, RockTec 65-coated

VHM | RockTec 65 | Typ H | Z 4 | Z 6 | 25° | HA | HSC

Application:
Torus milling cutter (HSC) with a short cutting edge for processing materials up to 65 HRC. For use in die and mould making and general mechanical engineering.

Execution:
- Solid carbide ultra-fine grain
- HA shaft in line with DIN 6535
- cutting edge finish
- Clearance
- Type H
- 0° chip angle
- RockTec 65 coated
- Radius tolerance = 0/-0.010 mm

Advantage:
- High material removal rate, high surface quality
- Good dimensional and geometric accuracy
- RockTec 65 coating for maximum service life

ATORN Solid carbide HSC high-feed milling cutter

4 cutting edges, RockTec 65-coated

VHM | RockTec 65 | Typ H | Z 4 | Z 6 | 3° | HA | HSC

Application:
High-feed milling cutter (HSC) with short blade for processing materials up to 65 HRC. Applications in die and mould making and general mechanical engineering.

Execution:
- Solid carbide ultra-fine grain
- HA shank in line with DIN 6535
- Cutting edge finish
- Centre cutting
- Type H
- Chip angle -1°
- Twist angle 3°
- RockTec 65-coated

Advantage:
- High material removal rate, high surface quality
- High feeds of 0.2-0.5 mm per tooth possible
- Good dimensional and geometric accuracy
- RockTec 65 coating for maximum service life

ORION® Solid carbide HPC torus multi-flute end mills

4-6 cutting edges, TiAlN coated

Ident. No. 003–030, 036–051

Application:
Torus milling cutter for processing materials up to 68 HRC, e.g. for die and mould making.

Execution:
- solid carbide ultra-fine grain
- TiSiN-coated
- HA shank in line with DIN 6535
- type H
- 0° chip angle
- cutting edge finish
- centre cutting
- Radius tolerance = +/- 0.005 mm

Advantage:
- optimum chip removal and temperature resistance
- Maximum service life deu to TiSiN coating

Notes:
At >60 HRC: ae = 0.07xD. Face cut from Z6 is only possible to a limited extent.

ORION® Solid carbide HPC torus multi-flute end mills

6-8 cutting edges, TiAlN coated

VHM | TiSiN | Typ H | Z 6 | Z 8 | 45° | HA | HPC

Ident. No. 100–112, 118–127

Application:
Torus milling cutter for processing materials up to 68 HRC, e.g. for die and mould making.

Execution:
- solid carbide ultra-fine grain
- TiSiN-coated
- Unequal twist angle
- HA shaft in line with DIN 6535
- type H
- 0° chip angle

- cutting edge finish
- centre cutting
- Radius tolerance = +/- 0.005 mm

Advantage:
- optimum chip removal and temperature resistance
- Maximum service life deu to TiSiN coating

Notes:
At >60 HRC: ae = 0.07xD. Face cut from Z6 is only possible to a limited extent.

ORION® Solid carbide HSC torus milling cutter

4 cutting edges, TiAlN-coated

VHM | TiAlN | Typ H | Z 4 | 30° | HA | HSC

Ident. No. 001–028
Standard version

Ident. No. 050–077

Application:
HSC torus milling cutter with a short cutter for machining steels up to 1300 N/mm² and for hard milling.

Execution:
- Solid carbide ultra-fine grain
- Straight shank in accordance with DIN 6535 HA
- TiAlN-coated
- With clearance
- Edge radius
- Standard design

Advantage:
- specially developed coating for hard machining
- Optimised cutting geometry for plunge milling

ATORN Solid carbide ball nose end mill

2 cutting edges, RockTec 65-coated

VHM | RockTec 65 | Typ H | Z 2 | 30° | HA

Application:
Radius cutter in standard design for machining materials up to 65 HRC, e.g. in die and mould making.

Execution:
- Solid carbide ultra-fine grain
- Cutting edge finish
- HA shank in accordance with DIN 6535
- With clearance

- Type H
- Chip angle -10°
- RockTec 65-coated
- Radius tolerance = 0/-0.010 mm

Advantage:
- Optimum chip removal and temperature resistance
- Maximum service life thanks to RockTec 65 coating

ORION® Solid carbide ball nose end mill

2 cutting edges, TiSiN-coated

Ident. No. 003–018, 024–027

Application:
Radius cutter in standard design for machining materials up to 68 HRC, e.g. in die and mould making.

Execution:
- solid carbide ultra-fine grain
- cutting edge finish
- HA shank in line with DIN 6535

- type H
- 0° chip angle
- TiSiN-coated
- Radius tolerance = +/- 0.005 mm

Advantage:
- optimum chip removal and temperature resistance
- Maximum service life deu to TiSiN coating

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

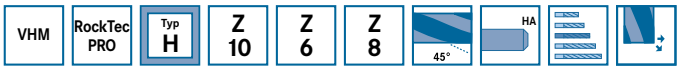
ATORN SC multi-flute end mills

6-10 cutting edges, TiAlSiN coated



Application:
Multi-tooth mills for circumferential, ultra-fine finish cutting and semi-rough cutting in materials up to 65 HRC.

Execution:
- Short cutters
- Cutting material, Ultra Micro fine grain
- Centre cutting
- HA shaft in line with DIN 6535

- Clearance
- type H
- With RockTec PRO coating

Advantage:
- optimum chip removal and temperature resistance
- Optimised geometry for machining hard materials
- maximum service life thanks to RockTec PRO coating

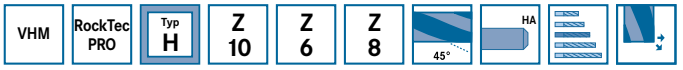
ATORN SC torus multi-flute end mills

6-10 cutting edges, TiAlSiN-coated



Application:
Torus multi-tooth mills in short design for machining materials up to 65 HRC, e.g. in die and mould making.

Execution:
- Cutting material, Ultra Micro fine grain
- cutting edge finish
- HA shaft in line with DIN 6535
- with clearance
- type H
- With RockTec PRO coating
- Radius tolerance = +/- 0.005 mm

Advantage:
- optimum chip removal and temperature resistance
- Optimised geometry for machining hard materials
- maximum service life thanks to RockTec PRO coating

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

DO YOU NEED YOUR WORKPLACE TO BE TIDY?
WE HAVE WHAT IT TAKES.
Do you need more than just a hammer, pair of pliers or a screwdriver? We have the full range for you. Machining tools, handling systems and measuring technology. However, we also offer tailor-made system solutions, large and small machinery and complete factory equipment. In total, more than 120,000 products.

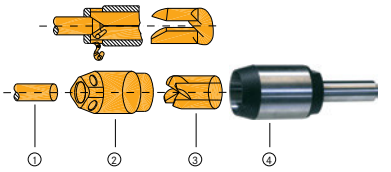
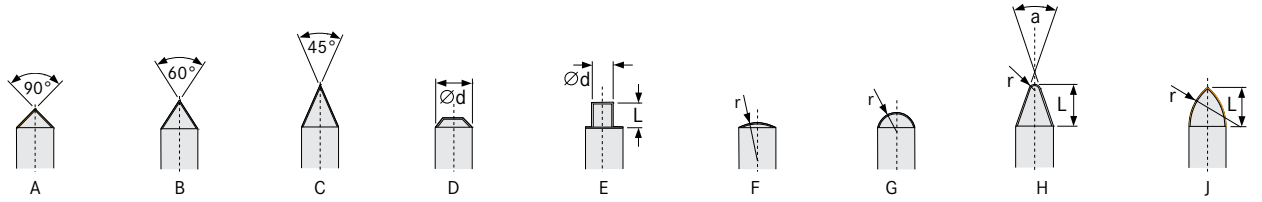
HAHN+KOLB GROUP
LET'S WORK TOGETHER.

Milling tool for wire and rod ends

Application:
For centred rounding, pointing, levelling and chamfering of wire and rod ends and mass-produced parts with cylindrical or polygonal cross-sections. The HSS milling blade and workpiece centring discs are replaceable. The end-milling tools are used in an advantageous rotary motion.



Overview - blade shapes:



Prices on request.

ORION® HSSE Co 5 quarter circle milling cutter (Milling cutter design standard DIN 6518)

Concave

Typ N | Z 4 | HB

Application:
Quarter circle milling cutter for machining complex forms, e.g. bore radii in materials up to 1000 N/mm².

Execution:
- Finishing teeth
- 5° cutting angle

- Up to 5 mm radius - backed off radially and axially
- From 5.5 mm radius - ground chamfers
- Up to 8 mm radius - combination shank in accordance with DIN 1835 B and D
- From 8.5 mm radius - straight shank in accordance with DIN 1835 B
- For mounting in self-clamping chucks, e. g. Clarkson, Bahnmüller

ORION® HSSE Co 5 T-slot milling cutter (Milling cutter design standard DIN 851)

Type N / NF

HSSE Co5 | Typ N | Typ NF | Z 10 | Z 6 | Z 8 | HB

Application:
for cutting T-slots conforming to DIN 650

Execution:
- straight shank in accordance with DIN 1835 B
- in accordance with DIN 650
- **No. 15792:**
  - type N
  - finishing teeth
  - cross-cut teeth
- **No. 15794:**
  - type NF
  - rough machining-finishing teeth
  - right-hand twist, approx. 25°

Prod. Gr. 1HH

ORION® HSSE Co 5 1-flute end mill

1 cutting edge, uncoated

Application:
For milling, plunging and contour milling NF metals and plastics.

Execution:
- HSSE Co 5
- Straight shank pursuant to DIN 6535 HA
- Sharp-edged
- Uncoated

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plas-tics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

Prod. Gr. 106

ORION® HSSE Co 8 end mill (Milling cutter design standard DIN 327 B/D)

2 cutting edges, uncoated/TiAlN coated

No. 15013

No. 15020

No. 15023

Application:
No. 15013: Suitable for universal plunge, groove and clearance milling.
No. 15020–15023: Suitable for universal plunge milling, groove milling and tolerance milling.

Execution:
- HSSE Co 8
- **No. 15013:**
  - Finishing teeth
  - Centre cutting
  - Uncoated
  - Short version
- **No. 15020:** uncoated
- **No. 15020–15023:**
  - finishing teeth
  - centre cutting
  - short version
- **No. 15023:** TiAlN coating for maximum service life

ORION® HSSE Co 8 end mill (Milling cutter design standard DIN 327 B/D)

3 cutting edges, uncoated/TiAlN coated

HSSE Co8 | TiAlN | Typ N | Z 3 | 30° | 45° | HB

No. 15102

No. 15105

Application:
End mill for universal use when plunge milling, groove milling and keyway cutting as well as face milling and peripheral milling.

Execution:
- HSSE Co 8
- finishing teeth
- centre cutting
- straight shank in accordance with DIN 1835 B
- without edge protection chamfer
- **No. 15102:** uncoated
- **No. 15105:** TiAlN coating for maximum service life

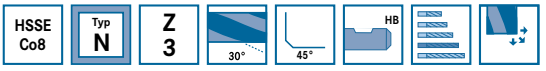
ORION® HSSE Co 8 end mill (Milling cutter design standard DIN 844 L)

3 cutting edges, uncoated



Application:
End mill for universal use when plunge milling, groove milling and keyway cutting as well as face milling and peripheral milling.

Execution:
- HSSE Co 8
- finishing teeth
- centre cutting
- straight shank in accordance with DIN 1835 B

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plastics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ATORN HPC HSSE PM end mill (Milling cutter design standard DIN 844 K)

4 cutting edges, TiAlN-coated

Application:
HPC end mill with an uneven twist for universal roughing and finishing in a wide range of materials. Optimized cutting material for unstable clamping conditions and increased service life.

Execution:
- HSSE PM
- Pursuant to DIN 844 K
- Straight shank according to DIN 1835 B
- TiAlN coating optimized for longer service life
- Centre cutting
- Edge protection chamfer
- Twist angle 35°/30-42°

Advantage:
- Extremely smooth running
- Reduces vibrations
- Ideal for machining in unstable clamping conditions
- Up to 30% increase in feed rate
- Enables greater surface quality

Application	Steel (N/mm²)			Stainless steel		Alu		Brass		Bronze		Plastics	Graphite G(C)FK	GG(G) GjMW	Titan-alloy	Nickel-alloy	Super-alloy	Hard mat.

ORION ATORN HSSE PM end mill (Milling cutter design standard DIN 844 K)

4-6 cutting edges, TiAlN coated

No. 15188

No. 15902

Application:
End mill for universal machining in various materials. Optimised cutting material for unstable clamping conditions and increased service life.

Version:
- HSSE PM
- Finishing teeth
- Centre cutting
- TiAlN coating for maximum service life
- Straight shank in accordance with DIN 1835 B
- also for dry milling using compressed air

ATORN End mill, HSSE-PM (Milling cutter design standard DIN 844 K)

4 cutting edges, TiAlN-coated

HSSE-PM | TiAlN | Typ N | 30° | 45° | HB

Application:
End mill for universal processing in a wide range of materials. Optimised flute material for delicate clamping situations and increased service life.

Execution:
- HSSE PM
- Finishing teeth
- Centre cutting

- TiAlN coating for outstanding service life
- Straight shank according to DIN 1835 B
- Also for dry milling with compressed air

Delivery:
10 mills in a case made of 15188

Notes:
Set in a case consisting of Ø 4/5/6/8/10/12/14/16/18/20 mm

Included in delivery		4/5/6/8/10/12/14/16/18/20 mm
Number of pieces in assortment/set (PCS)		10
Type		N
15188...	Ident. No.	500 ●

Prod. Gr. 118

ORION HSSE Co 5 roughing cutter (Milling cutter design standard DIN 844 K)

4-6 cutting edges, uncoated/TiAlN coated

HSSE Co5 | TiAlN | Typ NR | Z 4 | Z 5 | 30° | 45° | HB

Application:
No. 15261: Roughing cutter for universal machining in diverse materials.
No. 15263: Roughing cutter for universal machining.

Execution:
- HSSE Co 5

- Roughing teeth
- Centre cutting
- Straight shank in accordance with DIN 1835 B
- **No. 15261:** Uncoated
- **No. 15263:** TiAlN coating for maximum service life

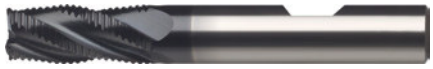
ORION® HSSE Co 8 roughing cutter (Milling cutter design standard DIN 844 K)

4 cutting edges, TiCN-coated

HSSE Co8 | TiCN | Typ HR | Z 4 | Z 5 | Z 6 | 30° | 45° | HB



Application:
Roughing cutter for universal machining.

Execution:
- HSSE Co 8
- fine roughing teeth
- centre cutting (over dia. 20 mm without centre cutting)
- TiCN coating for maximum service life requirements
- straight shank in accordance with DIN 1835 B

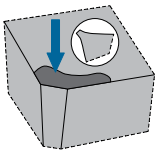
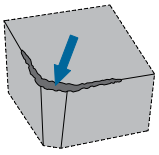
LET‘S WORK TOGETHER.
Do you need more than just a hammer, pair of pliers or a screwdriver?
We have the full range for you. Machining tools, handling systems and
measuring technology. However, we also offer tailor-made system solutions,
large and small machinery and complete factory equipment.
In total, more than 120,000 products.
www.hahn-kolb.com
HAHN+KOLB
GROUP
LET‘S WORK TOGETHER.

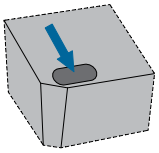
Indexable inserts - Types of wear and solution proposals



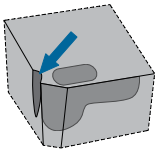
Built-up edges
- Select cutting material types with less friction resistance
- Increase the cutting speed
- Increase the feed
- Do not use water-soluble coolant
- Check coolant use
- Check indexable insert classification
- Check chip breaker selection
- Increase clearance angle
- Reduce chamfer and rounding of cutting edge



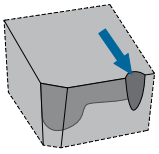
Brittle damage to the cutting edge
- Use tougher cemented carbide type
- Select less intensive cutting conditions
- Apply different cutting edge geometry
- Reduce feed when inserting into opening



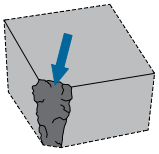
Scour wear
- Select harder cutting material
- Reduce cutting speed
- Reduce feed
- Reduce cutting depth
- Check coolant use
- Check chip breaker selection
- Increase clearance angle



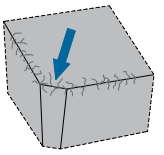
Oxidation gouging on secondary cutting edge
- Apply coated or wear-resistant cemented carbide types, if possible apply coated indexable inserts with Al2O3 content.
- Apply cooling emulsion or Increase cooling intensity
- Reduce cutting speed



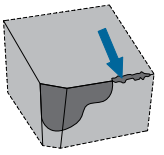
Notch wear on main cutting edge
- Apply coated or wear-resistant cemented carbide type, if possible apply coated indexable inserts with Al2O3 content.
- Use tool with a smaller adjustment angle
- Distribute chip unevenly



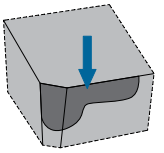
Breaking of cutting edge
- Select tougher cutting material
- Select cutting material type less sensitive to temperature fluctuations
- Reduce feed
- Reduce cutting depth
- Check chip breaker selection
- Increase size of chamfer and rounding of cutting edge
- Select machine with higher performance and rigidity



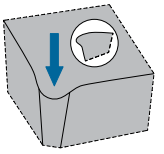
Ridge cracking at the cutting edge
- Select cutting material type less sensitive to temperature fluctuations
- Reduce cutting speed
- Reduce feed
- Reduce cutting depth
- Do not use water-soluble coolant
- Check coolant use
- Check chip breaker selection
- Increase clearance
- Reduce chamfer and rounding of cutting edge



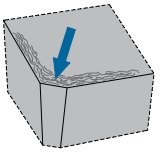
Damage to the cutting edge (outside opening)
- Change feed
- Select tool with different adjustment angle
- Apply different cutting edge geometry
- (different chip former)
- Use tougher cemented carbide type



Breaking of cutting edge
- Select tougher cutting material
- Select cutting material type less sensitive to temperature fluctuations
- Reduce feed
- Reduce cutting depth
- Check chip breaker selection
- Increase size of chamfer and rounding of cutting edge
- Select machine with higher performance and rigidity



Plastic deformation
- Apply wear-resistant cemented carbide type
- Reduce cutting speed
- Reduce feed
- Apply cooling emulsion or Increase cooling intensity
- Apply indexable inserts with a larger rounding radius of the tip
- Apply indexable inserts with larger tip angle



Fatigue crack along the open space
- Select tougher cemented carbide type
- Change retracting and extending of tool
- Change contact conditions
- Apply different cutting edge geometry or Indexable inserts with a different design of cutting edge
- Change feed

Cutting data on packaging

The HK ISO range of indexable inserts is always delivered with cutting data on the packaging. This provides the user with a high degree of safety and good handling.

Cemented carbide key - explanation

*HC 7620

① H = Cemented carbide
② C = Coated / W = uncoated
③ 7 = Generation of cemented carbide quality
④ ISO group 6 = P / 5 = M / 4 = K / 3 = N / 2 = S
⑤ Depending on the ISO group P10 / P20 / P30

ACP 25 T-6

① Brand: A = ATORN/O = ORION
② C = Cemented carbide CVD coated
P = Cemented carbide PVD coated
W = Uncoated
K = Ceramic/B = CBN/A = PKD
③ ISO group 6 = P/5 = M/4 = K/3 = N/2 = S
U = General processing
④ Code for the respective ISO group: P25
⑤ Processing type: T = Turning
⑥ Additional letter: Generation or additive for coating

***Note:** ORION cemented carbide grades follow the same pattern, with the difference that an O is placed in front, e.g. OHC 7625

ATORN High-performance 45° face milling cutters with Weldon shank

for indexable milling inserts HN.J 0805...

Application:
Excellent face milling cutter programme when it comes to high productivity, soft cuts with smooth running properties and excellent surface quality. With 12 effective cutting edges per indexable insert and an optimised design, this tool is ideal for universal use in roughing and finishing.

Execution:
- 45° setting angle
- Normal and fine pitch
- nickel-plated support
- With internal cooling
- Clamping screw tightening torque (indexable insert) 3.5 Nm
- with weld-on shank

Advantage:
- State-of-the-art technology with 12 effective cutting edges
- Low cost per cutting edge, high productivity
- available in geometries and varieties for almost all kinds of machining tasks

ATORN High-performance 45° face milling cutters

for indexable milling inserts HN.J 0805...

IK

Application:
Excellent face milling cutter programme when it comes to high productivity, soft cuts with smooth running properties and excellent surface quality. With 12 effective cutting edges per indexable insert and an optimised design, this tool is ideal for universal use in roughing and finishing.

Execution:
- 45° setting angle
- Normal and fine pitch
- nickel-plated support
- With internal cooling
- Clamping screw tightening torque (indexable insert) 3.5 Nm

Advantage:
- State-of-the-art technology with 12 effective cutting edges
- Low cost per cutting edge, high productivity
- available in geometries and varieties for almost all kinds of machining tasks

ATORN Face milling cutter 45°

For indexable milling inserts SN.X 1206 / SNMU 1206 / ONMU 1205

IK

Application:
The indexable milling cutter allows economical face milling at medium cutting depths and rough machining of many materials including steel, VA, cast materials and aluminium. The robust reversible tip with eight cutting edges is particularly economical and has impressive universal possible applications. 6.35 mm insert thickness improves process reliability enormously and protects the support body.

Execution:
- For milling plates SN.X 1206, SNMU 1206 and ONMU 1205
- Wear-resistant, nickel-plated version
- Normal and fine pitch

Advantage:
- Double-sided indexable insert with large chip angle and eight cutting edges
- Outstanding surface finish
- Very wide range of applications
- Approx. max. 5.5 mm
- Easy cutting with low cutting force

ORION Face milling cutter set with bore 45°, diameter 63 mm

Including 20x SEKT 1204 AFTN OHC4635

Version:
- Face milling cutters with 45° bore
- for indexable milling inserts SEKT..1204..
- Soft cutting owing to the positive installation position of the indexable insert
- for face milling
- Smooth milling behaviour of the tools

Advantage:
- One set for a wide variety of applications
- Axial run-out max. 0.03 mm
- Concentricity max. 0.03 mm

Delivery:
1x carrier 16022001 + 20x indexable inserts 16109150

Note:

ORION® Face milling cutters 45°

For indexable milling inserts SEET 12T3..

Application:
For universal use in all materials, predestined for cast processing.

Execution:
- Nickel-plated supports
- Long-term tested support design

- Normal and fine pitch
- Clamping screw tightening torque (indexable insert) M3.5 = 3.9 Nm

Advantage:
- Highly positive indexable milling inserts for low-vibration, steady cutting
- Outstanding value for money

Prod. Gr. 148

ATORN 90° high-performance angular milling cutter

everywhere a straight edge needs to be created in steel, cast iron, stainless steel or non-ferrous materials, ATORN makes precise angular milling cutting possible. the 90° angular milling cutters have excellent machining properties.

the entire spectrum of our new angular milling cutting tools offers basic bodies in 5 versions. the high number of teeth makes it possible to achieve large feeds. the highly positive geometry and uneven pitch ensure soft cutting and smooth operation. extra-long end mills are suitable for working with especially deep projections.

Flexible complete programme
- Dia. range 10-100 mm
- With shank, thread and location hole
- Angular milling cutter and long edge milling cutter
- With tight and wide pitch

Highly positive indexable inserts
- Cutting depth ap max. = up to 16.5 mm
- 2 geometries
- Corner radii of 0.2-4 mm
- 6 carbide grades
- Low power consumption

Exact 90°
- Angular milling cutting in roughing and finishing reduces post-processing efforts

High productivity
- Deep cutting depths
- High feed rates
- High removal rates

ATORN

ATORN High-performance shoulder milling cutter 90°

For indexable milling inserts AD.X 0602.. - AD.X 1705..

IK

Execution:
- Wear-resistant, nickel-plated version
- With internal cooling
- **Ident. No. 002–012:** Tightening torque for clamping screw (indexable insert) 2.25 Nm (TX 08)
- **Ident. No. 020–032:** Tightening torque for clamping screw (indexable insert) 3.5 Nm (TX 15)
- **Ident. No. 040–050:** Tightening torque for clamping screw (indexable insert) 1.2 Nm (TX 08)
- **Ident. No. 052–056:** Tightening torque for clamping screw (indexable insert) 0.7 Nm (TX 06)

Advantage:
- Highly positive indexable insert
- Low power consumption
- Precise 90° angular milling

ATORN Indexable milling inserts AD.X 1705..

For shoulder milling cutter 16029-16031

Execution:
- For indexable insert cutters no. 16029/16030/16031

Delivery:
Box quantity: 10 pieces

Notes:
Ident. No. 440, 444, 448, 456, 466, 476, 486: Best suited to non-ferrous metals only with ALC geometry.

Prod. Gr. 108

ATORN Bore/counter sink milling cutter 90° with Weldon shank

For indexable milling inserts AP.. 1003.. / AP.. 1604..

IK

Application:
For drilling/countersinking in all materials.

Execution:
- With Weldon shank
- Wear-resistant, nickel-plated version
- Robust supports

- **No. 16017:** Clamping screw tightening torque (indexable insert) M2.5 = 1.2 Nm
- **No. 16019:** Clamping screw tightening torque (indexable insert) M4 = 5.2 Nm

Advantage:
- High cutting performance
- Safe chip removal thanks to positive cutting geometry

ATORN Long edge milling cutter 90°

For indexable milling inserts AP.. 1003.. / AP.. 1604..

IK

Application:
For universal rough cutting in all materials.

Execution:
- With internal cooling
- **No. 16018:**
  - Robust support design for high-performance milling
- Clamping screw tightening torque (indexable insert) M2.5 = 1.2 Nm
- **No. 16019:**
  - Wear-resistant, nickel-plated version
  - Clamping screw tightening torque (indexable insert) M4 = 5.2 Nm

ATORN 15°, 30°, 45°, 60°, 75° and variable x° chamfer mills

For indexable milling inserts AP.. 1003.. / AP.. 1604..

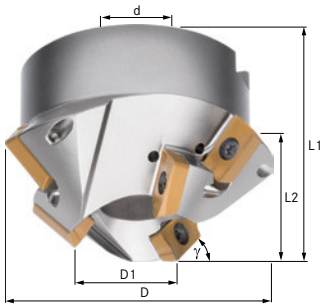
IK

Application:
Universal use for rough cutting of chamfers. Ideal for preliminary machining of welding seams. Recess formation possible thanks to indexable insert tolerances; improved finish can be achieved using APHT indexable inserts.

Execution:
- nickel-plated support

- any required chamfer angle is available (minimum acceptance 2 pieces)
- **Ident. No. 015–075:** clamping screw tightening torque (indexable insert) M4 = 5.2 Nm
- **Ident. No. 115–175:** clamping screw tightening torque (indexable insert) M2.5 = 1.2 Nm

Delivery:
Supplied with clamping screws and wrench



Ident. No. 015–075

ORION® Shoulder milling cutter 90° with shank

For indexable milling inserts APKT..1003..

Version:
- Black oxide finish, with robust carrier design
- Soft cutting owing to the positive installation position of the indexable insert
- For groove milling, circumferential milling and heel milling
- Smooth milling behaviour of the tools

Advantage:
- Axial run-out max. 0.03 mm
- Concentricity max. 0.03 mm
- Precise 90° shoulder milling

Delivery:
1 x holder incl. indexable insert screws, without inserts

Note:
Clamping screw tightening torque (indexable insert) M2.5 = 1.2 Nm

ATORN Shoulder milling cutter 90°

For indexable milling insert WNEX 0806..

IK

Application:
Powerful angular milling cutter with particularly economic, double-sided reversible tip with 6 cutting edges. Flexible use for multiple machining steps, such as face, angular, trim and groove milling.

Execution:
- Wear-resistant, nickel-plated version
- With internal cooling

Advantage:
- 6 cutting edges on double-sided indexable insert
- special chip breaker geometry enables low power consumption
- Large plate thickness for optimum process reliability
- Optimised plane cutting edge for high surface quality

ATORN Shoulder milling cutter 90°

For milling cutter indexable inserts LNMX

IK

Application:
4 flutes per indexable milling insert and special chip shape geometry for profitability and high cutting rates when milling faces, milling corners, trimming and milling grooves.

Execution:
- Wear-resistant, nickel-plated version
- With internal cooling

Advantage:
- 4 cutting edges on one double-sided indexable insert
- Special chip shape geometry for low power consumption
- Thick inserts

ORION® Shoulder milling cutter 90°

For indexable inserts SEET 1203..

Application:
Universal use for exact 90° cuts.

Execution:
- Wear-resistant, nickel-plated version
- Precision supports ensure insert fits perfectly
- Unequal division for excellent smooth running
- Clamping screw tightening torque (indexable insert) M3.5 = 3.5 Nm

Advantage:
- Low-vibration running
- Nickel-plated for long service life
- Very high surface quality
- Excellent value for money

ATORN tangential milling systems
extreme performance meets high profitability

the tangential indexable milling systems with 4 and 8 cutting edges have been developed for roughing and semi-finishing operations in steel and cast iron. the program includes supports in the diameter range from 50 to 160 mm and indexable inserts with cutting depths down to 11.5 mm.

process reliability through tangential installation position

the tangential installation position of the reversible tips brings some characteristic features. the favourable supporting surface and clamping force ratio provides maximum stability. even at high cutting performance, the tools make the process extremely reliable.

profitability through good machining properties

the stable indexable inserts have a positive chip angle resulting in excellent cutting behaviour and low machine power consumption. this allows the service life of the cutting edge to be greatly increased. this has a direct and positive impact on the tool costs.

cost savings through cycle time reduction

the ratio of tool diameter to number of teeth in combination with the high realisable feed rate provides enormous material removal rates. this means much shorter cycle times are achieved, which significantly reduces process costs or cost per part.

	Chip shape	description
	 SR (chamfered and rounded)	▪ 4-blade indexable insert for stable processes ▪ infeed depth to ap max 11.5 mm ▪ stable geometry for wide range of applications
	 ER (rounded)	▪ 8-blade indexable insert for a high level of profitability ▪ infeed depth to ap max 10 mm ▪ soft cutting geometry for reduced chipping forces

ATORN Shoulder milling cutter 90° tangential - 4 cutting edges
For indexable milling insert LNMU 1306..

IK

Application:
Milling tool with tangentially arranged indexable inserts and 4 usable cutting edges.

Execution:
▪ Wear-proof, nickel-plated design
▪ With internal cooling

Advantage:
▪ Cutting depth down to 11.5 mm

ATORN high-feed milling cutter – small cutter very large
high material removal rate, broad field of application

the new ATORN high-feed milling cutter is the perfect application for rough machining small and medium-sized components. the positive high-feed geometry of the uniform, small indexable insert drills allows for the highest material removal rate even with less powerful machining centres. two different indexable insert geometries in two different cutting grades ensure that almost all materials commonly used in tool and mould construction can be processed. the high-feed milling cutter is available as screw-on mill cutter in diameters from 16 – 42 mm with 2 – 6 cutting edges as well as arbour milling cutters with a diameter of 40 – 80 mm with up to 9 cutting edges. all cutting edges are supplied through internal coolant supply. only one size of indexable inserts is required for all tool diameters.

Advantages:
- High material removal volume, even with less efficient machining centres
- High feed rates can be achieved
- Low storage costs for the indexable inserts

Features:
- Universal indexable insert geometry for a wide range of applications
- Positive geometry of the indexable insert for a soft cut
- Uniform size of the indexable inserts
- Internal cooling on all cutting edges

High-feed milling cutter

Definition:
For HSC machining, the cutting speed and the feed rates are significantly increased and the cutting depth is significantly reduced.
The ATORN® high-feed milling cutter is a high-performance tool with wide-ranging applications for modern tool machines. Applications in die and mould making and general mechanical engineering.

Advantages:
High material removal rate, high surface quality, high dimensional and shape accuracy. Four-cutter indexable insert with large inner circle, innovative coating for robust cutting edges and wide-ranging applications, considerable indexable insert thickness for robust machining processes.

ATORN High-feed milling cutter

For indexable milling inserts XCNT 120520..

IK

Application:
Dramatically increase your productivity and make great cost-savings – with the high-feed milling cutters. The unique cutting geometries provide extremely smooth running and low cutting forces at maximum feed rates. Our extensive program offers solutions for a wide range of applications in modern machine tools, whether in die and mould making or in general mechanical engineering.

Execution:
- Wear-resistant, nickel-plated version
- Robust supports
- With internal cooling
- Variable pitch
- Tightening torque (indexable insert) M3.5 = 3.5 Nm

Advantage:
- Broad range of application
- Minimum-vibration milling even for long mounting lengths
- Optimum roughing tool
- Tooth feed possible up to 3 mm
- Reduces production times

ATORN High-feed milling cutters with thread

For indexable milling inserts: XCN 0703.., XCN. 09T3..

IK

Application:
Dramatically increase your productivity and make great cost-savings – with the high-feed milling cutters. The unique cutting geometries provide extremely smooth running and low cutting forces at maximum feed rates. Our extensive program offers solutions for a wide range of applications in modern machine tools, whether in die and mould making or in general mechanical engineering.

Execution:
- With screw-in thread
- Wear-resistant, nickel-plated version
- Robust supports
- With internal cooling
- Variable pitch
- Tightening torque (indexable insert) M3.5 = 3.5 Nm

Advantage:
- Broad range of application
- Minimum-vibration milling even for long mounting lengths
- Tooth feed possible up to 3 mm
- Reduces production times

ATORN Face and copy milling heads

For indexable milling inserts RCKX, OCKX, XCKX, XOKX, SAHT

IK

Application:
With a total of 5 different insert types in different cemented carbide grades, there is a wide range of application possibilities. Minimum-vibration milling is guaranteed with low chipping forces and good chip removal for round, square or octagonal inserts. The low cutting force reduces the drive power required by up to 25%, which facilitates use on less efficient machines without issue.

Execution:
- Wear-resistant, nickel-plated version
- With internal cooling
- Clamping screw tightening torque (indexable insert) M5 = 8 Nm

Advantage:
- Versatile with its 5 different insert types
- Low chipping forces
- Minimum-vibration milling
- Low power consumption
- High axial infeed

For indexable milling inserts SEEX 12T4..

Application:
Centring and NC spot drilling, chamfering, V-groove milling, lathe facing

Execution:
- Straight shank and clamping surface in accordance with DIN 1835 B
- Shaft tolerance h6
- clamping screw tightening torque (indexable insert) M4 = 5.2 Nm

Advantage:
- Cost-effective thanks to the four usable cutting edges
- Improved installation position of the reversible tip increases process reliability

ATORN Chamfer and centring cutters in set

For indexable milling inserts SEEX 12T4..

Application:
Centring and NC spot drilling, chamfering, V-groove milling, lathe facing

Execution:
- Including 5 indexable inserts
- Straight shank and clamping surface in accordance with DIN 1835 B
- Shaft tolerance h6
- Clamping screw tightening torque (indexable insert) M4 = 5.2 Nm

Delivery:
Set consists of a holder and five reversible tips SEEX 12T4.

Chamfer angle (Degree)	D max. (mm)	D min. (mm)	Clearance length (mm)	Length (mm)	Shank Ø (mm)	Number of cutting edges (PCS)	Suitable for indexable inserts	16107... Ident. No.

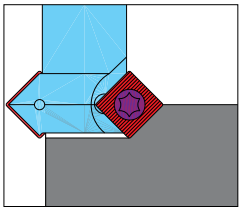
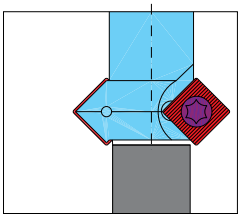
Prod. Gr. 155

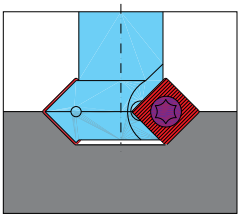
Application examples: chamfer cutter



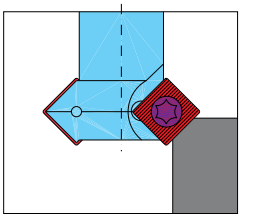
Face milling



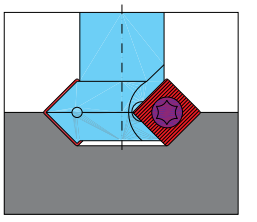
Face milling of narrow webs



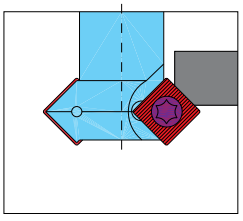
Profile milling of slots



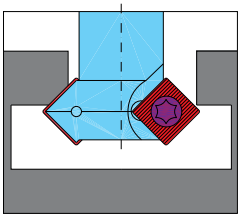
Transverse chamfering



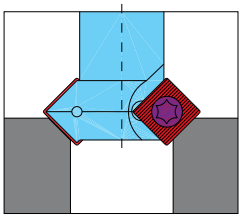
Chamfering bores, circular



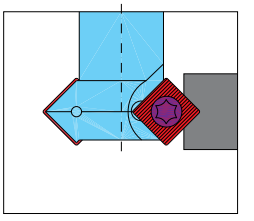
Reverse chamfering



T-slot chamfering



90° countersinking of holes, axial



90° Vee block chamfering

ATORN Double 45° chamfer mill

For indexable milling inserts SDMW 0903.., SDMT 0903.., SPMW 1204.., SPMT 1204..

Application:
Universal use for chamfering and deburring.

Execution:
- with straight shank in accordance with DIN 1835 B
- clamping screw tightening torque (indexable insert) M3.5 = 3.5 Nm, M4.5 = 4.5 Nm

									Double 45° chamfer mill		Clamping screw for indexable inserts	
Chamfer angle (Degree)	D (mm)	d1 (mm)	L3 (mm)	L1 (mm)	d (mm)	Number of cutting edges (PCS)	Suitable indexable insert no.	Suitable for indexable inserts	16107... Ident. No.		16108... Ident. No.

ATORN 30°, 45°, 60° chamfer mill

For indexable milling inserts TCMT 1102.., TCMT 16T3..

Application:
Universal use for chamfering and deburring.

Execution:
- with straight shank in accordance with DIN 1835 B
- Shaft tolerance h6
- Clamping screw tightening torque (indexable insert) M2.5 = 1.2 Nm, M4 = 5.2 Nm

									30°, 45°, 60° chamfer mill		Clamping screw for indexable inserts

Prod. Gr. 108

ATORN Adjustable chamfer mill

For indexable milling inserts TCMT, SPMW, SPMT

Application:
Universal chamfer cutter for deburring, chamfering and countersinking in rigid operating conditions. Cannot be used on drills.

Execution:
- Adjustable from 10°-80°
- With straight shank in accordance with DIN 1835 B
- Nickel-plated carrier
- +/- 2.5° scale tolerance
- For precise adjustments, please use a presetting device

- Clamping screw tightening torque (indexable insert) M2.5 = 1.2 Nm, M4 = 5.2 Nm
- With replacement box for using TCMT 16.. and SPM.1204 indexable inserts

Delivery:
1x carrier incl. 1x cassette for TC..16.. and 1x cassette SC..12.., without indexable inserts

Notes:
Makeshift tool: max. cutting depth 1 mm

									Adjustable chamfer mill		Clamping screw for indexable inserts		Spare box for chamfer cutter

Prod. Gr. 108

ATORN T-slot cutter

for indexable milling inserts SPGT.., SPMT..

Application:
the T-slot cutter cuts at the circumference and at both sides and is suitable for milling T-slots. alternating inclined teeth (cross-toothing) achieves a high cutting performance.

Execution:
- Wear-resistant, nickel-plated version

- with weld-on shank
- Internal cooling

Delivery:
With clamping screw and wrench

Notes:
For T-slots, in accordance with DIN 650-UNI 4788-ISO 299.

YOU MOVE MANKIND.
WE HAVE WHAT IT TAKES.
Do you need more than just a hammer, pair of pliers or a screwdriver?
We have the full range for you. Machining tools, handling systems and
measuring technology. However, we also offer tailor-made system solutions,
large and small machinery and complete factory equipment.
In total, more than 120,000 products.

Heavy-duty clamp holder range with internal cooling

The newly developed ATORN high-performance clamp holders ensure an improvement in service life of up to 30 % in series production.

The advantages include:

- Three cooling channels directly aligned to the cutting edges ensure optimal cooling for cutting edges and excellent chip breaking
- Individual connection options (bore at the bottom of the holder or connection to coolant hose)
- Very compact holder design ensures good accessibility to the component and reliable chip removal processes

			page
17830700-725	SCLC clamp holder with internal cooling, positive For facing and longitudinal turning using CC indexable inserts		670
17835700-725	SDJC clamp holder with internal cooling, positive for longitudinal and copy turning with DC indexable insert		673
17833700-735	SVJC clamp holder with internal cooling, positive For copy and longitudinal turning and facing with VC indexable insert		682
17837705-730	PCLN clamp holder with internal cooling, negative For facing and longitudinal turning using CN indexable inserts		691
17838705-730	PDJN clamp holder with internal cooling, negative for copy and longitudinal lathing with DN indexable insert		692
17839715-730	PWLN clamp holder with internal cooling, negative For copy and longitudinal turning and facing with WN indexable insert		695

clamp holder external – clamping system S
for positive indexable inserts with hole

clamping positive indexable inserts which are pulled into the insert setting via a central clamping screw. modern and reliable clamping system for positive lathe machining. the advantage of this system is the high level of accessibility due to the compact design. chips can be removed reliably with this system.

			page

17832	SVVC clamp holder positive, neutral For copy and longitudinal turning and facing with VC indexable insert		683-684

clamp holder external - clamping system C
for positive indexable inserts without hole

clamping positive indexable inserts without hole. classic clamping system for positive indexable inserts in sinter versions with and without chip breaker.

			page
17825010-030	CKJN clamp holder, negative, right For copy and longitudinal turning and facing with KNUX indexable insert		684

clamp holder external - clamping system D
for negative indexable inserts with hole

clamping negative indexable inserts using clamping lever and adjustable clamp. the system avoids vibrations of the indexable insert at high feed rate or with severely interrupted machining.

			page
17826010-021	DCLN clamp holder, negative, right For face and longitudinal turning with CN indexable insert		684
17826100-115	DDJN clamp holder, negative, right For copy and longitudinal turning with DN indexable insert		685
17859001-002	MTEN clamp holder, negative, neutral For copy and longitudinal turning with TN indexable insert		686
17859010-015	MTJN clamp holder, negative, right For copy and longitudinal turning with TN indexable insert		687

clamp holder external - clamping system M
for negative indexable inserts with hole

clamping negative indexable inserts using clamping lever and adjustable clamp. the system minimises vibration of the indexable insert. it is the first choice for negative ceramic inserts with central hole and also for cermet indexable inserts.

			page
17859110-120	MVJN clamp holder, negative, right For copy and longitudinal turning with VN indexable insert		687
17859200-205	MVVN clamp holder, negative, neutral For copy and longitudinal turning with VN indexable insert		688
17860020-060	MWLN clamp holder, negative, right For copy and longitudinal turning and facing with WN indexable insert		688

clamp holder external - clamping system P
for negative indexable inserts with hole

clamping negative indexable inserts using clamping lever. clamping system P allows a wide range of applications. it is the first choice for general turning operations. the advantage of this system is the high level of accessibility due to the compact design. chips can be removed reliably with this system.

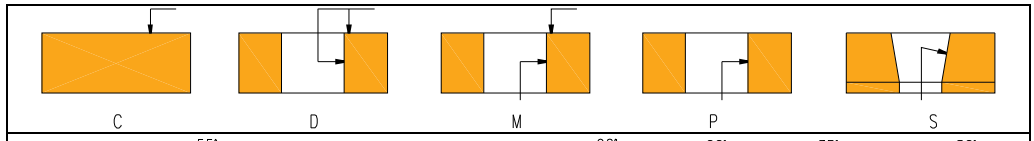
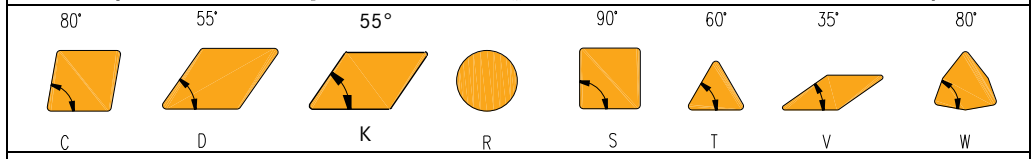
Clamp holder for turning for outside machining
Clamping system, dimensions and tolerances

Designations
Clamping holder for turning according to DIN 4983

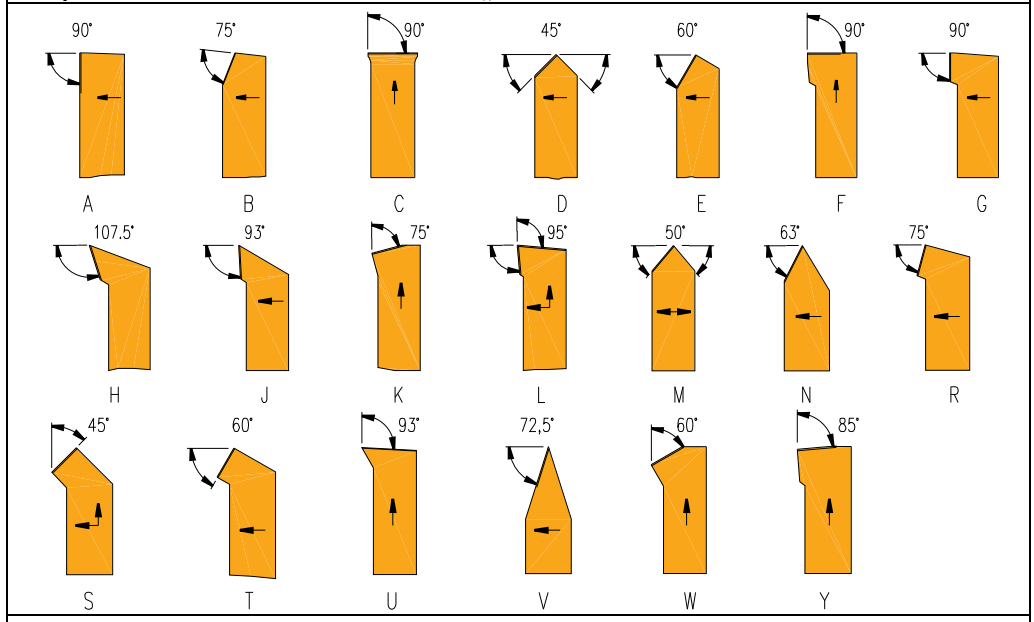
Clamping system ①



Insert shape ②

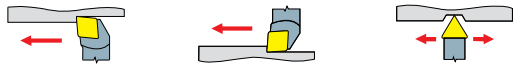


Holder shape ③

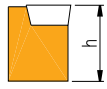


Clearance angle indexable insert ④

Cut direction ⑤



Cut direction ⑥



As basic number, the height of the cutter edge h in mm is indicated.
For clamping holders, the height of the cutter edge h equals the shank height.

Shank width ⑦

Clamping holder: Indication of the shank width b in mm.

Holder length ⑧

	A	B	C	D	E	F	G	H	J	K	L	M	N
mm	32	40	50	60	70	80	90	100	110	125	140	150	160

	P	Q	R	S	T	U	V	W	X	Y	–
mm	170	180	200	250	300	350	400	450		500	

Cutter length ⑨

Indication of the cutter length in mm without decimal point, in case of one-digit numerals with leading 0 (e. g. 08).
In case of round indexable inserts, the diameter is always indicated.

Additional indications

These indications do not form part of the standard and are facultative, e. g. "-U" stands: with shim.

Example

ATORN MVJN 93° R/L insert holder, negative (DIN 4983)

for copy and longitudinal turning using VN indexable inserts

Application:
For copy and longitudinal turning with VN indexable insert, 35°.

Execution:
- Precision-manufactured steel support, burnished, hardened, adjustable clamping system, type V, working angle 93°, tip angle 35°, clearance angle 0°

Advantage:
- Very streamlined geometry, optimised for contour lathe work with large feed depths and unfavourable conditions
- Negative geometry of the body ensures good stability and force absorption at large cutting depths
- Broad range of use: suitable for both finishing and roughing operations
- Adjustable clamp minimises vibrations and ensures good force transfer

ATORN MWLN 93° R/L insert holder, negative (DIN 4983)

for copy and longitudinal facing using WN indexable inserts

Application:

Ident. No. 020, 030, 040, 050, 060: For copy and longitudinal turning and facing with WN 80° indexable insert.

Ident. No. 025, 035, 045, 055, 065: For copy, longitudinal turning and facing with WN 80° indexable insert.

Execution:

- Precision-manufactured steel support, burnished, hardened, adjustable clamping system, type W, working angle 93°, tip angle 80°, clearance angle 0°

Advantage:

- Triple-edge geometry lowers cost per cut
- Negative geometry of the body ensures good stability and force absorption at large cutting depths
- Broad range of use: suitable for both finishing and roughing operations
- Adjustable clamp minimises vibrations and ensures good force transfer

boring bars - clamping system S
for positive indexable inserts with hole

Clamping positive indexable inserts which are pulled into the insert setting via a central clamping screw. Modern and reliable clamping system for positive lathe machining. The advantage of this system is the high level of accessibility due to the compact design. Chips can be removed reliably with this system.

17849100-109	SVQC steel boring bar, positive for longitudinal and copy turning using VC indexable inserts		719
17855110-119	SVUB boring bar, steel positive for longitudinal and copy turning with VB indexable insert		720

boring bar - clamping system C
for positive indexable inserts without hole

Clamping positive indexable inserts without hole. Classic clamping system for positive indexable inserts in sinter versions with and without chip breaker.

			page
17851010-020	CKUN steel boring bar, negative, right for longitudinal turning with KN indexable insert		721

boring bar - clamping system M
for negative indexable inserts with hole

Clamping negative indexable inserts using clamping lever and adjustable clamp. The system minimises vibration of the indexable inserts. It is the first choice for negative ceramic inserts with central holes and also for cermet indexable inserts.

			page
17851110-120	MVUN steel boring bar, negative, right For copy and longitudinal turning using VN indexable insert		721

clamp holder external - clamping system P
for negative indexable inserts with hole

Clamping negative indexable inserts using clamping lever. Clamping system P allows a wide range of applications. It is the first choice for general turning operations. The advantage of this system is the high level of accessibility due to the compact design. Chips can be removed reliably with this system.

17852011-041	PCLN steel boring bar, negative, right for facing and longitudinal turning using CN indexable insert		722
17853001-041	PDUN steel boring bar, negative, right for copy and longitudinal turning using DN indexable insert		723
17854050-075	PWLN steel boring bar, negative, right for facing and longitudinal turning using WN indexable insert		724
17856011-021	PSKN steel boring bar, negative, right for longitudinal turning using SN indexable insert		724
17858111-151	PTFN steel boring bar, negative, right for longitudinal turning using TN indexable insert		725

boring bars
in steel construction

Internal drilling down to a removal depth of up to 3xD.

boring bars
in HSS design

Inner boring up to a drill depth of 4xD. HSS has good vibration-damping properties.

boring bars
in cemented carbide design

Inner boring up to a drill depth of 5xD. Cemented carbide has very good vibration-damping properties.

ORION ATORN SDUC boring bar set offset 93.5° positive steel, HSS, carbide (DIN 8024)

for longitudinal and copy turning using DC indexable inserts

IK

Application:

Ident. No. 100–105, 230–255: For longitudinal and copy turning with DC 55° indexable insert.

Ident. No. 110: For longitudinal and copy turning using DC 55° indexable inserts.

Execution:

- **Ident. No. 100–105:** precision-manufactured **steel** boring bar set, offset, with inner cooling, D type, 93.5° pitch angle, 55° tip angle, 7° clearance angle
- **Ident. No. 110:** precision-manufactured **steel** boring bar set, offset, without inner cooling, D type, pitch 93.5°, tip angle 55°, clearance angle 7°
- **Ident. No. 230–235:** precision-manufactured **HSS** boring bar set, offset, with inner cooling, D type, 93.5° pitch angle, 55° tip angle, 7° clearance angle
- **Ident. No. 250–255:** precision-manufactured **solid carbide** boring bar set, with inner cooling, D type, 93.5° pitch angle, 55° tip angle, 7° clearance angle

Advantage:

- **Ident. No. 100–105, 230–255:**
  - very slim geometry, optimised for contour turning work
  - positive body geometry ensures low cutting forces
- **Ident. No. 110:**
  - Universal use for facing and longitudinal turning
  - Positive body geometry ensures low cutting forces
- **Ident. No. 230–235:** high level of rigidity and good cutting quality thanks to HSS supporting material
- **Ident. No. 250–255:** very high level of rigidity and good cutting quality thanks to solid carbide supporting material

ATORN SDUC boring bar 93.5°, positive steel HPT

for longitudinal and copy turning using DC indexable inserts 4XD

IK

Application:
For longitudinal and copy turning with DC 55° indexable inserts.

Execution:
- Precision-manufactured boring bar, **steel**, with internal cooling, offset, type D, 93.5° pitch angle, 55° tip angle, 7° clearance angle

Advantage:
- High-performance boring bar with optimised chip space geometry for reliable chip removal
- Minimises Dmin with unchanged vibration tendency

ATORN SDQC boring bar set 107.5° offset, positive steel (DIN 8024)

for longitudinal and copy turning using DC indexable inserts 3XD

IK

Application:
For longitudinal and copy turning with DC 55° indexable insert.

Execution:
- precision-manufactured steel boring bar, offset, with inner cooling, D type, 107.5° pitch angle, 55° tip angle, 7° clearance angle

Advantage:
- very slim geometry, optimised for contour turning work
- positive body geometry ensures low cutting forces
