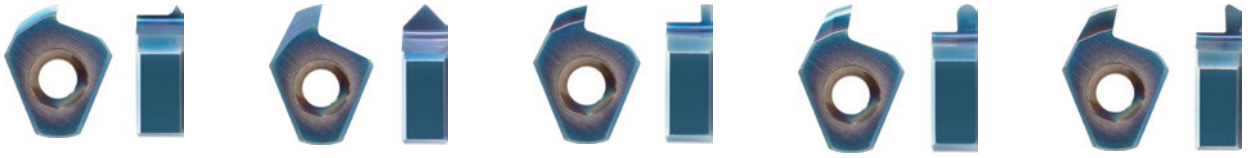
Miniature turning programme with front cutting attachment
For demanding series users

Application:
Miniature programme for the boring range from 8-13 mm in all material groups.

Advantages:
- Extremely wide range for the applications internal drilling, copying, recessing, thread cutting, chamfering, grooving
- Outstanding service life in difficult materials with stainless steel, titanium and hard machining up to 50 HRC
- Special versions in all variants with short delivery time
- Precision-machined cutting inserts and holders for quick changing of the cutting insert on the machine
- Carbide carrier ensures a low tendency to vibrate
- Internal cooling ensures reliable machining in series production



ATORN Holder for miniature cutting insert with front-face cutting attachment

Application:
For clamping miniature cutting inserts.

Execution:
- Solid carbide holder in steel design with clamping screw

Suitable for indexable inserts	Length (mm)	Shank Ø (mm)	Clearance length (mm)	Clearance Ø (mm)	Material	17135... Ident. No.

ATORN Miniature cutting insert, front face
For thread cutting, 60° partial profile

Application:
For variable 60° thread cutting.

Execution:
- Solid carbide cutting insert, 60°

Advantage:
- Very hard cemented carbide grade ensures low wear
- Stable geometry optimised for female thread cutting machining
- Innovative coating technology for universal use with very high service life requirements

ATORN Miniature cutting insert, front face

For thread cutting, 55° partial profile

Application:
For variable 55° thread cutting.

Execution:
- Solid carbide cutting insert, 55°

Advantage:
- Very hard cemented carbide grade ensures low wear
- Stable geometry optimised for female thread cutting machining
- Innovative coating technology for universal use with very high service life requirements

Miniature boring bar range
For ambitious serial users

Application:
For miniature boring from diameters 4.8 mm with CD.., CP.., DC.., WC.., VC.. indexable inserts

- Wide holder range in steel and cemented carbide
- Innovative cutting material range cemented carbide, CVD thick-film diamond and CBN covers the processing of all materials ISO P, M, K, N, S, H
- The many and varied forms of the holder covers a wide range of applications

ATORN®
Leistung braucht Qualität.

ATORN SCLD boring bar, offset, steel, positive (DIN 8024)
For facing and longitudinal turning using CD indexable inserts

IK

Application:
For face and longitudinal turning with CD indexable insert, 80°.

Execution:
- Precision-manufactured boring bar, **steel**, with internal cooling, offset, type C, attack angle 95°, tip angle 80°, clearance angle 7°

Advantage:
- Universal use for face and longitudinal turning
- Positive geometry for the body ensures low cutting forces

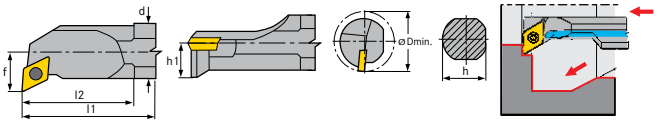
For longitudinal and copy turning using DC 55° indexable inserts

Execution:
- Precision-manufactured boring bar, **steel**, with internal cooling, offset, shape D, 93.5° pitch angle, 55° tip angle, 7° clearance angle

Advantage:
- Slim contour, optimised for copy turning work
- Positive body geometry ensures low cutting forces



p. 746

Prod. Gr. 1AQ

Miniature boring bar quick-change range
For ambitious serial users

Application:

For miniature boring from diameters 4.8 mm with CD.., CP.., DC.., WC.., VC.. indexable inserts

- Quick-change system for highly flexible use
- Very high changeover accuracy
- Innovative cutting material range cemented carbide, CVD thick-film diamond and CBN covers the processing of all materials ISO P, M, K, N, S, H
- The many and varied forms of the holder covers a wide range of applications

ATORN®
Leistung braucht Qualität.

ATORN Miniature boring bar holder
For use with miniature boring bars

Execution:
- With stop pin and setting pin

Advantage:
- Innovative system with perfect attachment of the tool

ATORN SCLD boring bar, solid carbide, positive

For facing and longitudinal turning using CD indexable inserts in holders

IK

Application:
For face and longitudinal turning with CD indexable insert, 80°.

Execution:
- Precision-manufactured boring bar, **solid carbide**, with internal cooling, offset, type C, attack angle 95°, tip angle 80°, clearance angle 7°

Advantage:
- Universal use for facing and longitudinal turning
- positive body geometry ensures low cutting forces

ATORN SDUC boring bar, offset, solid carbide, positive

For longitudinal and copy turning using DC indexable inserts with holders

IK

Application:
For longitudinal and copy turning with DC indexable insert 55°

Execution:
- precision-manufactured **solid carbide** boring bar, with inner cooling, D type, 93.5° pitch angle, 55° tip angle, 7° clearance angle

Advantage:
- slim contour, optimised for copy turning work
- Positive body geometry ensures low cutting forces

ATORN SDQC boring bar, offset, solid carbide, positive

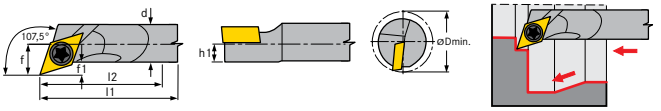
for longitudinal and copy turning using DC indexable inserts with holders

IK

Application:
For longitudinal and copy turning with DC 55° indexable insert.

Execution:
- Precision-manufactured boring bar, **solid carbide**, with internal cooling, offset, shape D, 107.5° pitch angle, 55° tip angle, 7° clearance angle

Advantage:
- slim contour, optimised for copy turning work
- positive body geometry ensures low cutting forces



p. 746

Thread-cutting range
For demanding serial users

Carbide overview and advantages of ground thread cutting inserts:

- Very precisely ground tolerance of the thread cutting insert enables the most precise application possibilities within narrow tolerances
- Extremely sharp and finished cutting edge ensures precise and optimal cutting results
- No more spring passes (re-cutting) required when cutting the thread
- Wide selection of carbide grades for all material groups

Tungsten carbide type	ISO group	Use	Thicknesses	Vc m/min	
HC5630	P20-P40 K20-K30	Stainless steel, steel, special alloys, castings and hardened steel	Universal use 1. Choice of steel and stainless steel	Medium-very high	HC5615	K10-K20 P10-P25	Steels (<30 HRc), stainless steel, castings, non-ferrous metals and special alloys	Universal use 1. Choice of steel and stainless steel	Medium-high	
HC5625	P15-P35	Steel and stainless steel	Universal use 1. Choice of steel and stainless steel	Low-medium	
HC5640	P30-P50 K25-K40	Steel, stainless steel, castings	Universal use 1. Choice of steel and stainless steel	Extremely low	
HC5515	M10-M20 K05-K20 N10-N20 S10-S20	Stainless steel, special alloy, steel, castings	High-performance application in stainless steel, steel and special alloys	Very high	HC5110	H10-H25 S10-S25	Hardened steel - 63 HRC special alloys	1. Choice of hardened steel and special alloys	Medium	
HW5615	K10-K30	Non-ferrous metals, stainless steel and special alloys	1. Choice of non-ferrous metals	Medium	

Carbide overview and advantages of sintered thread cutting inserts:

- Sintered, rounded and finished edge provides a very stable cutting edge, which is advantageous in certain applications.
- Effective chip control
- The stable cutting edge allows spring passes during thread cutting
- Very economical thread cutting option due to the affordable price

Tungsten carbide type	ISO group	Use	Thicknesses	Vc m/min	
HC5620	M10-M20 K05-K20 N10-N20 S10-S20	Stainless steel, steel, A2 stainless steel, special alloys, castings and non-ferrous metals	Universal use 1. Choice of steel and stainless steel	Medium-high	
HC5520	K10-K20 P10-P25	Steels, stainless steel, castings, special alloys and hardened steel 45HRC	Universal use 1. Choice of steel and stainless steel	Medium-high	

Shim for clamp holders

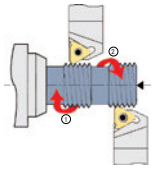
The correct selection of the shim is extremely important as the shim defines the angle to the workpiece. The gradient must be set correctly to ensure that the cutting edge does not rub on the workpiece. To do this, shims with different gradient angles are available for the required application. The most accurate method of determining the correct shim is to use the formula shown below.

Formula for calculating the pitch angle (s)	
For 60° and 55° threads (metric, UN, WHIT, NPT, BSPT)	**For trapezoidal, round, ACME, STUB threads**
s = ((20*p/d)*r)	s = (((30*p/2)/d)*r)

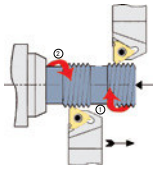
The following parameters are required for calculating the pitch angle:
d = nominal diameter of the thread
p = thread pitch
r = cutting direction

The cutting direction determines whether positive or negative shims are used.
r = 1 Cutting direction towards the chuck, see graphic Fig. 1 and 4
r = -1 Cutting direction away from the chuck, see graphic Fig. 2 and 3

External machining:

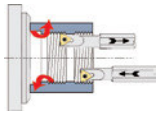


Right-hand thread:
1st right holder with right indexable insert
2nd left holder with left indexable insert

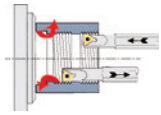


Left-hand thread:
3rd right holder with right indexable insert
4th left holder with left indexable insert

Internal machining:



Right-hand thread:
1st right holder with right indexable insert
2nd left holder with left indexable insert



Left-hand thread:
3rd right holder with right indexable insert
4th left holder with left indexable insert

Examples for calculating the pitch angle (s):

Male thread, right, in front of turning centre	**Male thread, right, behind turning centre**
Towards the chuck r = 1	**Away from the chuck r = -1**
M30 x 2	Tr16 x 3
s = (20p/d)*r s = (20*2/30)*1 s = 1.33°	s = (((30*p/2)/d)*r) s = ((30*3/2)/16)*-1 s = -0.93
The calculated pitch angle is now rounded up/down to the next size.	
s = 1.50	s = -0.5

ATORN Shims for threading tool holder

ATORN Insert holders for male threads

Application:
For male thread machining for thread turning inserts.

Execution:
- Precision-engineered steel holder, hardened black-oxide finish, with 1.5° pitch angle
- Without replaceable shim. Pitch angle cannot be corrected.

Advantage:
- top-quality and wear-resistant steel support with high-strength clamping screw
- precision-engineered insert seat provides extremely precise threads and excellent finish quality

Prod. Gr. 158

ATORN Insert holders for female threads

Application:

For female thread machining for thread turning inserts.

Execution:

- precision-engineered steel support, burnished and hardened, with 1.5° pitch angle

Advantage:

- top-quality and wear-resistant steel support with high-strength clamping screw
- precision-engineered insert seat provides extremely precise threads and excellent finish quality
- **Ident. No. 020–075, 320–375:** internal cooling for excellent process reliability and good chip removal

ATORN Indexable grooving inserts and indexable grooving insert set

for thread holders

Application:

Ident. No. 040–062: For producing outer and inner grooves on CNC or conventional machines in steel, stainless steel, cast iron and non-ferrous metals material groups at mid-range cutting speed.

Execution:

- **Ident. No. 040–062:** Plunge insert ground on three sides

Advantage:

- **Ident. No. 040–062:**
  - Thread-turning inserts and plunge inserts require only one holder
  - Three-cutter geometry ensures high profitability
  - Innovative cutting geometry and TiN coating ensure a long service life

Technical data:

- Size of indexable insert: 16
- Tolerance of plunge depth: +/- 0.02 mm

Ident. No. 010–020

ATORN Set of indexable grooving inserts

For creating external and internal recesses on CNC or conventional machines.

Application:
For producing outer and inner grooves on CNC or conventional machines in steel, stainless steel, cast iron and non-ferrous metals material groups at mid-range cutting speed.

Execution:
- Set of plunge inserts ground on three sides, comprising 1 each of plunge width 1/1.2/1.4/1.7/1.95/2.25

Advantage:
- Tool-cost optimisation: Thread-turning inserts and plunge inserts require only one holder
- Three-cutter geometry ensures high profitability
- Innovative cutting geometry and TiN coating ensure a long service life

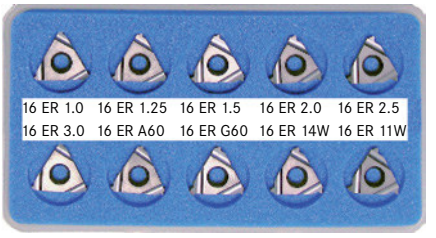
ATORN Indexable thread-cutting insert set

for right-hand male and female threads

Application:
For manufacturing threads in the steel, stainless steel and cast iron material group on CNC machines at medium to high speed.

Execution:
- **Ident. No. 001:** Ground thread-turning insert for male threads, TiALN coated
- **Ident. No. 002:** Thread-turning insert set for female threads, TiALN coated

Advantage:
- Ground thread-turning insert ensures good surface qualities and cutting precision
- High cutting speed and long service life through innovative TiALN coating technology
- Set covers a broad range of uses in the most common pitches



Composition of set			16 ER 1.0 ISO, 16ER 1.25 ISO, 16 ER 1.5 ISO, 16 ER 2.0 ISO, 16 ER 2.5 ISO, 16 ER 3.0 ISO, 16 ER A60, 16 ER G60, 16 ER 14W, 16 ER 11W	16 IR 1.0 ISO, 16 IR 1.25 ISO, 16 IR 1.5 ISO, 16 IR 2.0 ISO, 16 IR 2.5 ISO, 16 IR 3.2 ISO, 16 IR A60, 16 IR G60, 16 IR 14W, 16 IR 11W

Engraving system ATORN GROOVE AD/AE

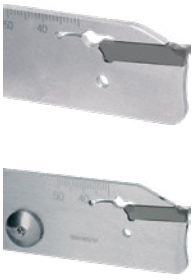
Innovative latest-generation engraving system combines the advantages of a double-cutting system with those of a single-cutting system. The holders of this system can accommodate both AD (twin cutter) and AE (single cutter).

- AD = double-edged grooving system grooving depth < 24mm
- AE = Single cutting system recessing depth > 24 mm

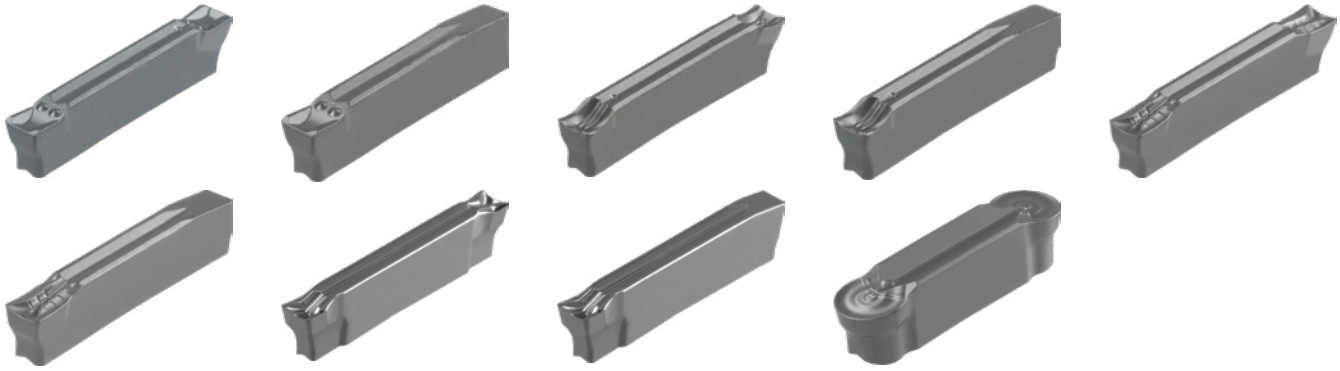
Advantages:

- Broad holder range for a wide range of users
- Wide selection of carbide grades and chip breakers
- Excellent profitability and flexibility

Radial engraving blades	Clamp holder monoblock radial and axial	Clamp holder modular radial and axial	Boring bar radial
			



Compatible engraving plates AD (double-cutting) and AE (single-cutting)



Engraving system ATORN GROOVE ASS

Innovative engraving system for deep grooving and process-safe cutting in series production.
Innovative clamping of engraving plate, system operation is very stable even under difficult conditions.

Radial engraving blades	Engraving blades IC radial	Clamp holder monoblock radial and axial

Compatible engraving plates ASS

Carbide qualities ATORN Groove

Advantages:

- The latest generation of innovative cutting material technology – the specific cutting material mixture for every application
- A wide range of innovative coatings in CVD and PVD designs tailored to the application task
- Long service life in series production!

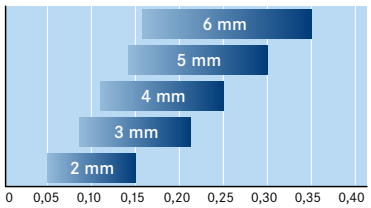
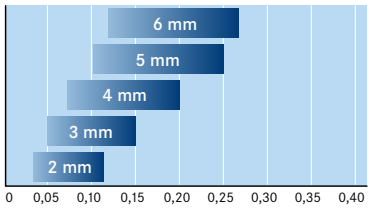
ATORN Groove chip breaker – AD/AE system

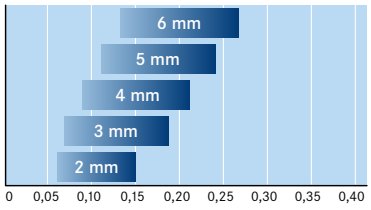
M chip breaker – the universal tool for grooving and parting
- Wide range of applications in the machining of steel and cast iron
- High tool life due to negative edge rounding
- Long service life in high-strength steel

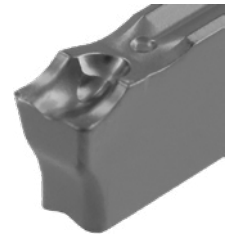


F chip breaker – the extremely positive tool for parting and grooving
- Very positive chip geometry ensures a soft cut, reduces the formation of built-up edges and minimizes cutting forces
- Ideal for materials with low dexterity and very thin-walled components
- Very good chip control at low feed rates

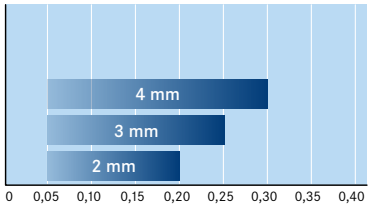


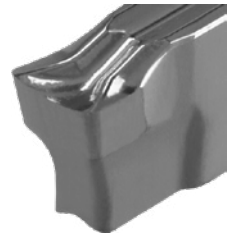
ET chip breaker – the problem solver in stainless steel and special alloys grooving and parting
- Positive chip geometry ensures a soft cut in stainless steel and machines that are difficult to machine
- Special geometry reduces the formation of built-up edges and ensures very good chip removal



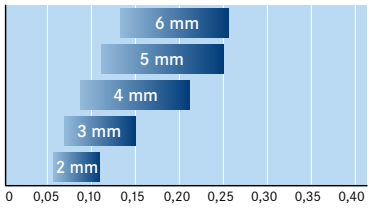


MN chip breaker – the specialist for non-ferrous metal processing – highly positive geometry with polished chip chamber ensures high tool life in non-ferrous metals
- Very good chip control

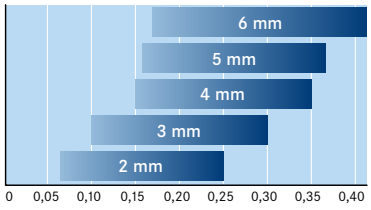




TR chip breaker – the universal tool for copy-turning, grooving and parting
- Innovative chip breaker ensures excellent chip control in a broad delivery spectrum
- Wide range of applications in steel, cast iron and stainless steel processing

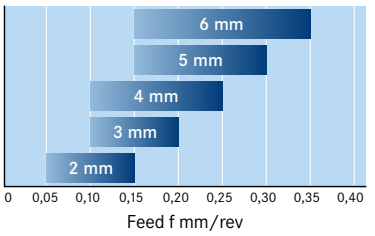


R round – the radius grooving insert for copy-turning, grooving and parting
- Innovative circumferential chip breaker ensures excellent chip control in a broad delivery spectrum
- Wide range of applications in steel, cast iron and stainless steel processing

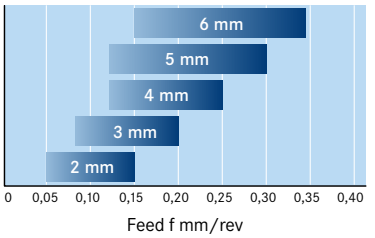


ATORN Groove chip breaker – ASS system

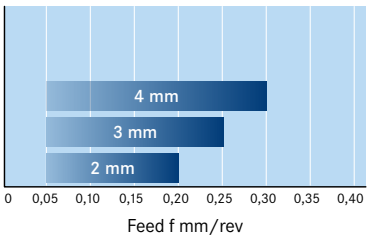
M chip breaker – the universal tool for grooving and parting
- Wide range of applications in the machining of steel and cast iron
- High tool life due to negative edge rounding
- Long service life in high-strength steel



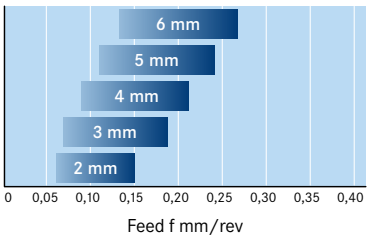
MU chip breaker – the universal tool for grooving, parting and copy-turning
- Wide range of applications in the machining of steel and cast iron
- Very good chip control

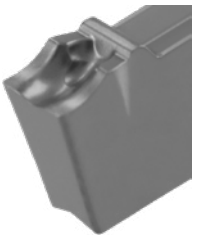


MN Spanbrecher – the specialist for non-ferrous metal processing – highly positive geometry with polished chip chamber ensures high tool life in non-ferrous metals
- Very good chip control



ET chip breaker – the problem solver in stainless steel and special alloys for grooving and parting
- Positive chip geometry ensures a soft cut in stainless steel and machines that are difficult to machine
- Special geometry reduces the formation of built-up edges and ensures very good chip removal





ATORN Cut-off and grooving blade GROOVE TYPE ABE-AD/AE neutral

for deep grooving and cutting with AD/AE indexable grooving inserts

Application:
For deep grooving and cutting, external.

Execution:
- precision-manufactured steel support, nickel-plated and hardened

Advantage:
- High-quality and wear-resistant steel support
- precisely manufactured insert setting

ATORN Insert holder with internal cooling GROOVE TYPE AME-AD/AE

for cutting, grooving and copying with indexable grooving inserts AD/AE

IK

Application:
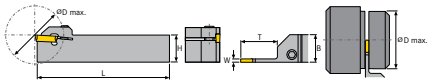
For external cutting, grooving and copy turning.

Execution:
- precision-manufactured steel support, nickel-plated and hardened with clamping element

Advantage:
- high-quality and wear-resistant steel support with high-strength clamping element
- precisely manufactured insert seat



p. 770

ATORN Cutting inserts dual-edge AD type M neutral

for radial grooving and cutting with universal robust cutting edge

Application:
For radial grooving and cutting in a wide range of applications with stable cutting edge.

Execution:
- Precision-sintered cutting insert, M geometry with positive cutting edge and rounded cutting edges

Advantage:
- Stable grooving geometry for a wide range of applications

ATORN Cutting inserts dual-edge AD type F neutral

for radial grooving and cutting with soft-cutting chip geometry

Application:
For radial grooving and cutting with very positive and soft-cutting chip geometry.

Execution:
- Precision-sintered cutting insert, F geometry with extremely positive cutting edge

Advantage:
- Very low cutting forces and good chip control even at low feed rates.
- Very good cutting performance in materials with low strength.
- First choice for thin-walled components.

Prod. Gr. 1FR

ATORN Cutting inserts single-edge AE type F Neutral

for radial grooving and cutting with soft-cutting chip geometry

Application:
For radial grooving and cutting with very positive and soft-cutting chip geometry.

Execution:
- Precision-sintered cutting insert, F geometry with extremely positive cutting edge

Advantage:
- Very low cutting forces and good chip control even at low feed rates.
- Very good cutting performance in materials with low strength.

ATORN Cutting inserts dual-edge AD type F right/left

for radial grooving and cutting with soft-cutting chip geometry

Application:
For radial grooving and cutting with very positive and soft-cutting chip geometry.

Execution:
- Precision-sintered cutting insert, F geometry with extremely positive cutting edge

Advantage:
- Very low cutting forces and good chip control even at low feed rates.
- Very good cutting performance in materials with low strength.
- First choice for thin-walled components.

ATORN Cutting inserts dual-edge AD type ET neutral

for radial grooving and cutting with extremely positive cutting edge

Application:
For radial grooving and cutting with extremely positive chip geometry for stainless steels and special alloys that are difficult to cut.

Execution:
- Precision-sintered cutting insert, ET geometry with extremely positive cutting edge

Advantage:
- Highest service life in the series production of stainless steels
- A problem solver in special alloys that are difficult to cut!

ATORN Cutting inserts single-edge ASS type MU Neutral

for radial grooving and cutting with universal robust cutting edge

Application:
For radial grooving, longitudinal turning and copy turning in a wide range of applications with excellent chip control.

Execution:
- Precision-sintered cutting insert, MU geometry with positive universal geometry

Advantage:
- Excellent chip breaking and chip control

Prod. Gr. 1FR

ATORN Cutting inserts single-cutting ASS type M Neutral

for radial grooving and cutting with universal robust cutting edge

Application:
For radial grooving and cutting in a wide range of applications with stable cutting edge.

Execution:
- Precision-sintered cutting insert, M geometry with positive cutting edge and rounded cutting edges

Advantage:
- Stable grooving geometry for a wide range of applications

Prod. Gr. 1FR

ATORN Cutting inserts single-edge ASS type ET Neutral

for radial grooving and cutting with extremely positive cutting edge

Application:
For radial grooving and cutting with extremely positive chip geometry for stainless steels and special alloys that are difficult to cut.

Execution:
- Precision-sintered cutting insert, ET geometry with extremely positive cutting edge

Advantage:
- Maximum service life in the series production of stainless steels
- A problem solver in special alloys that are difficult to cut!

			Carbide type	ACP20G		APU40G		APM45G

for cutting, grooving and copying with indexable grooving inserts AD/AE

Application:
For cutting, grooving and copy turning externally.

Execution:
- Precision-manufactured steel support, nickel-plated and hardened with clamping element

Advantage:
- High-quality and wear-resistant steel support with high-strength clamping element
- precisely manufactured insert setting

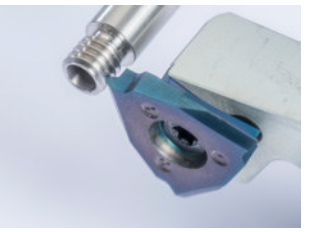
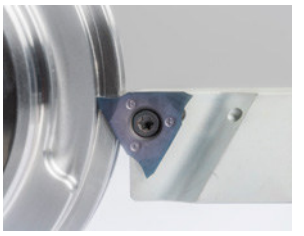
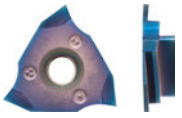
Grooving and lathe system
For professional series users

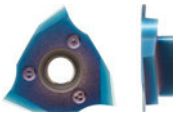
Application:
The newly developed Atorn grooving and lathe system has been engineered for ambitious operators in serial machining. It caters to machining tasks such as grooving, tapping, thread cutting, lathing and recessing.

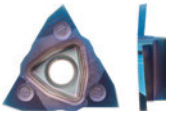
Advantages:
- Wide machining range with only one holder.
- High-performance cutting material and coating ensure a long service life and a wide machining range even in difficult materials such as stainless steel or titanium.
- 3 cutting edges make for a high level of profitability.
- High swapping accuracy - can be changed directly on the machine.
- Internal coolant supply ensures a long service life and high degree of process reliability.

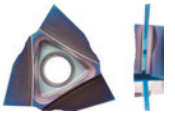


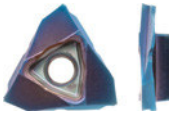


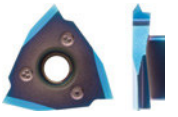






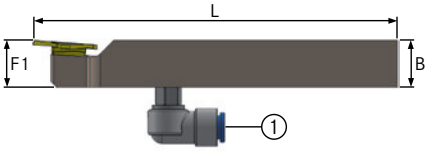






ATORN Holder for cutting and turning system, 3 cutting edges
For cutting insert no. 17759

Application:
For carrying grooving inserts, 3 cutting edges



Advantage:
- Clamping system ensures high power transmission of the cutting insert
- High-strength carrier

Prod. Gr. 1FG

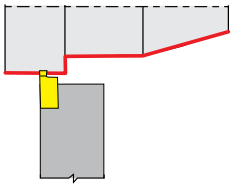
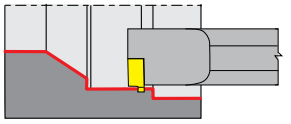
Cutting system with two-flute cutting insert
For demanding serial users

Application:
For grooving (circlips) and copy turning.
- Precision-ground cutting insert for the highest demands on accuracy
- High-performance substrate for universal use in a variety of materials
- Precise plate seats for highly accurate turning operations
- High-strength support material ensures a long service life of the carriers
- Only one cutting insert for external and internal machining

Holder

Boring bar





ORION® External holder for grooving inserts
For external grooving, for universal use up to 1,300 N/mm²

Application:
For external plunging with plunge insert no. 17670.

Execution:
- Steel tool holder with high-strength clamping screw

Advantage:
- High-quality and hard-wearing steel holder
- Precision-machined plate seat

Holder

					External holder for grooving inserts		Clamping screw for 2-cutter indexable insert

ORION® Recessing set circlips

For internal and external grooving, for universal use up to 1,300 N/mm²

Application:
For internal and external plunging in steel (stainless steel), NF metal, cast and (special alloy) material groups in single part and series production.

Execution:
- External blade holder with right-hand shank 16 x 16, right boring bar with diameter of 16 (for min. bores of > 17.8 mm) and 5 x 2 plunge inserts no. 17670002-006

Advantage:
- Universal use; for internal and external plunging
- Precision-ground plunge insert for long service life and precise plunging

ORION® Plunge insert, 2-way cutter

For internal and external grooving, for universal use up to 1,300 N/mm²

Application:
For internal and external plunging in steel (stainless steel), NF metal, cast and (special alloy) material groups in single part and series production.

Execution:
- Precision-ground plunge insert with two cutters, TiN coating

Advantage:
- Universal use; for internal and external plunging
- Precision-ground plunge insert for long service life and precise plunging

ORION® Grooving insert set, 2-way cutter

For internal and external grooving, for universal use up to 1,300 N/mm²

Application:
For internal and external plunging in steel (stainless steel), NF metal, cast and (special alloy) material groups in single part and series production.

Execution:
- Precision-ground plunge insert with 2 cutters, TiN-coated, two in each plunge width of 1.1/1.3/1.6/1.85/2.15

Advantage:
- Universal use; for internal and external plunging
- Precision-ground plunge insert for long service life and precise plunging

set

Prod. Gr. 159

cutting system with triple-cutter cutting insert
For demanding serial users

Application:
For grooving (circlips and grooves).
- Precision-ground cutting insert for the highest demands on accuracy
- Wide assortment of cutting widths
- High-performance substrate for universal use in a variety of materials
- Precise plate seats for highly accurate turning operations
- High-strength support material ensures a long service life of the carriers

ORION® Blade holders for grooving inserts
For grooving circlip grooves

Application:
For external plunging for grooves and locking rings.

Execution:
- Precision-machined steel holder, burnished and hardened

Advantage:
- High-quality, hard-wearing steel holder
- Precision-machined plate seat

ORION® HSSE cutting-off lathe chisel, similar to DIN 4961, rectangular (DIN 4961 similar)

For external cutting, for universal use up to 1,300 N/mm²

Application:
For external parting off in steel, (stainless steel), cast iron, non-ferrous metals and (special alloys) material groups up to a strength of 1300 N/mm².

Execution:
- butt-welded design with varnished and rectangular shank

Advantage:
- wear-resistant cutting material and high-quality grinding ensure a long service life

ORION® HSSE lathe chisel, similar to DIN 4953, square

For internal longitudinal lathing, for universal use up to 1,300 N/mm²

Application:
For internal longitudinal turning in steel, (stainless steel), cast iron, non-ferrous metals and (special alloys) material groups up to a strength of 1300 N/mm².

Execution:
- **Ident. No. 130–250:** butt-welded design with varnished and square shank
- **Ident. No. 340–430:** butt-welded design with varnished and round shank

Advantage:
- wear-resistant cutting material and high-quality grinding ensure a long service life

Prod. Gr. 159

ORION® HSSE round lathe blank (DIN 4964)

Round cross-section

Application:
For grinding individual tool geometries with round cross-section.

Execution:
- precision-ground and round bar made from HSSE, W9 Co 10 (1.3207), 10% cobalt and 64-67 HRC

Advantage:
- top-quality and wear-resistant cutting material with high cobalt content
- precision-ground cross section with excellent surface quality

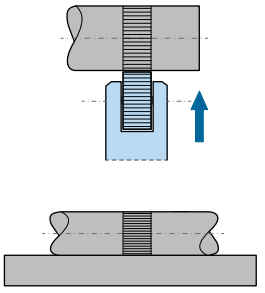
Knurling - process

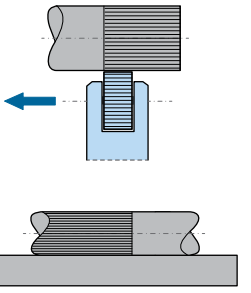
The knurling process is used for the defined production of surfaces. In principle, a knurl serves as a power transmission element on components that are operated manually. Through the knurling process, the surface on the component is raised and higher forces can be transmitted. The process is used in all sectors from the watchmaking industry to mechanical engineering. Knurling can be applied to a wide range of materials.

A distinction is made between two basic knurling processes:

Knurl pressing (forming) is a chip-free process in which the material begins to flow
- Recessed knurls (radial/tangential)
- Axial knurls (axial machining direction)



Knurl cutting is a cutting process
- Axial knurls (axial machining direction)



Advantages of knurl pressing:
- Knurls can be produced cost-effectively
- High stability, because the fibre structure is not interrupted
- Clean, plain surface

Disadvantages of knurl pressing:
- Increase in diameter
- The final diameter must be calculated
- High effort required, therefore, high load on the machine and workpiece
- Risk of material flaking
- Limitation of the components to be manufactured (very thin-walled components cannot be processed)

Advantages of knurl cutting:
- Small increase in workpiece diameter Material is machined
- Low surface compaction
- High precision and surface finish of the knurl
- Machining of hard-to-machine materials (VA steels)
- Processing of plastics (flat knurl preferred)
- Relief of the machine guides (low radial pressures)
- Use in CNC lathes (series production, process safety)
- VDI direct mounting (VDI 16 to VDI 50)
- Knurls of thin-walled pipes without deformation of the workpiece
- Diameter tolerances of up to ± 0.05 mm can be achieved
- Use as left-hand, right-hand and conventional tool: No tool available on the market offers these application options. Thanks to the patented adjustment mechanism, it is possible to transform a right-hand tool into a left-hand tool and vice versa, without dismantling the carrier. The carrier can be moved 25 mm in relation to the clamping shaft and fixated in any position. These tools can therefore be used on CNC and conventional machines at will.

Disadvantages of knurl cutting:
- Limited application range: Only RAA and RGE knurled profiles can be produced; only cylindrical workpieces in the axial machining direction can be processed
- To place the tool in the middle area of the workpiece, a groove is required.
- Time-consuming machining resulting in high cost
- Low strength. An interrupted fibre structure is created and notching effect produced
- Precise tool adjustment and fine adjustment as well as precise preparation of the workpiece are also required

Technical information, knurl pressing

in knurl pressing, the material is subject to chipless deformation. The material is cold-formed via the knurling wheel and flows outwards. This forming process increases the diameter of the workpiece. The following list provides an overview of bulging for the various pitches and materials.

the most suitable knurling materials are:
- All ferrous materials with a stability of max. 1700 N/mm2 and an elongation of at least 4 - 5%
- Non-ferrous base metals
- Hardwood
- Plastic corresponding to the requirements of the elongation and tensile strength

An increase in diameter is a particular characteristic of knurl forming. A diameter increase of approx. 40% of the used knurling pitch is considered an empirical value for larger initial diameters. the initial diameter can be calculated according to the following formula:

$$d_2 = d_1 - (X \cdot t)$$

d2 = Starting diameter (rotation diameter) [mm]
d1 = End diameter [mm]
X = The value X can be derived from the following table
t = Pitch

Knurl form	Value X
Parallel to axis, form AA	0.50
Left knurl, form BL	0.50
Right knurl, form BR	0.50
Cross knurl, tips raised, form KE	0.67
Cross knurl, tips recessed, form KV	0.33
Left/right knurl, tips raised, form GE	0.67
Left/right knurl, tips recessed, form GV	0.33

Application of knurl pressing and knurl cutting based on number of knurls

	Knurling wheels	Description	
Knurl pressing	1	▪ For recess knurls with various recess profiles ▪ Axial knurls are only possible with knurling wheels of form AA ▪ Knurling tools for recess knurling are clamped at 90° and knurling tools for axial knurling at 88° to the workpiece (prevention of material congestion towards front edge of the knurling wheel)		2	▪ For recess knurls with various recess profiles ▪ Axial knurls are only possible with knurling wheels of form AA (knurling parallel to axis) and forms BL + BR (left/right knurling) ▪ Knurling tools for recess knurling are clamped at 90° and knurling tools for axial knurling at 88° to the workpiece (prevention of material congestion towards front edge of the knurling wheel)	Knurl cutting	1	▪ Exclusively for knurls parallel to the axis (RAA) ▪ For left-hand tools, a knurl cutter roller BL 30° is used and for right-hand tools, a knurl cutter roller BR 30° ▪ Tools must be clamped at right angles to the workpiece ▪ Marking points for the precise tip height are indicated on the side of the head; for tools for CNC machines, the top edge of the shaft is the reference edge		2	▪ Facilitates left/right knurling (RGE) with 30° and with 45° spiral ▪ For knurls RGE 30°, two knurl cutter rollers AA are inserted into the tool; for RGE 45° knurls, one knurl cutter wheel BR 15° and one knurl cutter wheel BL 15° ▪ The workpiece diameter and the exact tip height is set using the adjustment scale. Prior to the actual milling process, guide the tool against the workpiece and check whether the two knurl cutter rollers engage simultaneously	
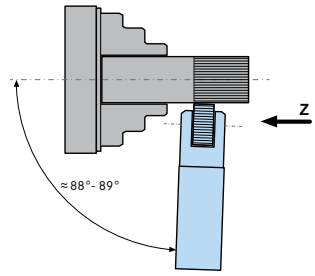
Procedures and process parameters, knurl forming
Key steps

1. Tool setting - tip height
2. Clearance angle: max. 1° (only in the case of axial machining and wide projection lengths)
3. Infeed depth = pitch (for example 1 mm pitch requires 1 mm infeed in Ø)
4. Repeated insertion into profile possible
5. Knurling depth only sufficiently deep to produce sharp knurl
6. After a dwell time of 3-10 rotations, the workpiece is knurled under longitudinal feed
7. If the dwell time is too long, flaking may occur
8. Compliance with X-zero position for tangential tools



Reference values for process parameters

Material *	Workpiece diameter * (mm)	Speed n (rpm) *	Radial feed f (mm/r) *	Axial feed f (mm/r) *	Infeed depth (mm)
Up to a maximum of RM = 1000 N/mm²	10	650	0.08-0.1	0.08-0.1	p = Ø
Up to a maximum of RM = 1000 N/mm²	50	160	0.08-0.1	0.08-0.1	p = Ø
Up to a maximum of RM = 1000 N/mm²	100	100	0.08-0.1	0.08-0.1	p = Ø

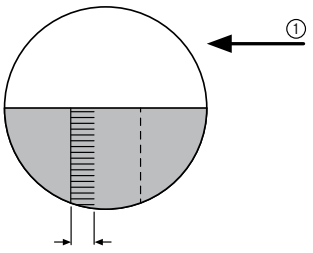
Note: The specified values (initial values) are recommendations and must be optimized in the application.

* The professional quality as well as the wear of the knurling wheels depend on:
- The combination of workpiece diameter and rotation speed
- The feed
- The material
- And the application (e.g. clamping situation - one or both sides)

Procedures and process parameters, knurl cutting
Key steps

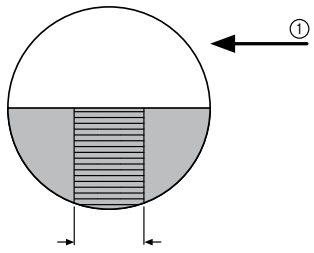
1. Tool setting - tip height
2. Align knurling wheels: Wheel must taper slightly on the spindle-side edge (approx. 1/3 of the wheel width)
3. Clearance angle: 1° - max. 3°
4. Infeed depth = pitch (for example 1 mm partition requires 1 mm infeed in Ø)
5. Knurling depth only sufficiently deep to produce sharp knurl
6. After a dwell time of 3-10 rotations, the workpiece is knurled under longitudinal feed

Correct imprint:
approx. 1/3 knurling width



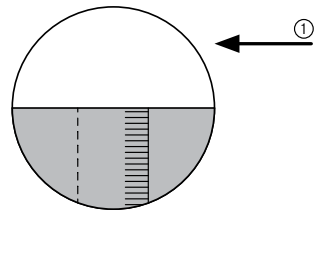
① Cutting direction

Incorrect imprint:
Complete knurling width



① Cutting direction

Incorrect imprint:
Knurling would “press”



① Cutting direction

Reference values for process parameters

Material *	Workpiece diameter * (mm)	Speed n (rpm) *	Radial feed f (mm/r) *	Axial feed f (mm/r) *	Infeed depth (mm)
Up to a maximum of RM = 1000 N/mm²	10	1000	0.08-0.1	0.1-0.15	p = Ø
Up to a maximum of RM = 1000 N/mm²	50	500	0.08-0.1	0.1-0.15	p = Ø
Up to a maximum of RM = 1000 N/mm²	100	300	0.08-0.1	0.1-0.15	p = Ø

Note: The specified values (initial values) are recommendations and must be optimized in the application.

* The professional quality as well as the wear of the knurling wheels depend on:
- The combination of workpiece diameter and rotation speed
- The feed
- The material
- And the application (e.g. clamping situation - one or both sides)

Knurling tool (series RD1 model 131)

for knurling on lathes and turning machines

Application:

Ident. No. 009–016: For pressing knurl profiles in accordance with DIN 82 RAA, RBL, RBR, RGE, RGV, (RKE, RKV on request) in the material groups of steel, stainless steel and non-ferrous metals.

Ident. No. 025–031: For forming knurl profiles in accordance with DIN 82 RAA, RBL, RBR, RGE, RGV, (RKE, RKV on request) in the steel, stainless steel and non-ferrous metals material groups.

Execution:

- **Ident. No. 009–016:** hardened steel tool holder, integrated tip height, cemented carbide runner pins, set screw in the shaft for clearance angle collection
- **Ident. No. 025–031:** hardened steel tool holder, integrated tip height, cemented carbide runner pins, set screw in the shank for clearance angle correction

Advantage:

- **Ident. No. 009–016:**
  - click-pin design for user-friendly handling
  - Easy conversion to a marking tool
  - Knurling without plunging also possible
  - inexpensive knurl production
- **Ident. No. 025–031:**
  - Click-pin version for user-friendly handling
  - easy conversion to a marking tool
  - Knurling without grooving also possible
  - cost-effective knurl production

Notes:

Top edge of the shaft = tip height Supplied without knurling wheel

Knurling tool (series RD1 model 130)

for knurling on lathes and turning machines

Application:

For pressing knurl profiles in accordance with DIN 82 RAA, RBL, RBR, RGE, RGV, RKE and RKV in the steel, stainless steel and non-ferrous metals groups.

Execution:

- Hardened steel tool holder, cemented carbide runner pins

Advantage:

- Easy conversion to a marking tool
- Knurling without plunging also possible
- inexpensive knurl production

Notes:

Knurling tool (series RD2 model 141)

for knurling on lathes and turning machines

Application:
For knurl forming for knurl profiles in accordance with DIN 82 RAA, RBL30°/45°, RBR30°/45°, RGE 30° and RGE 45° in the steel, stainless steel and non-ferrous metals material groups.

Execution:
- Hardened steel tool holder, integrated tip height, cemented carbide runner pins

Advantage:
- click-pin design for user-friendly handling (only with 20x20 and 25x20 shaft designs)
- modular design enables right-handed and left-handed knurl forming
- Inexpensive knurl production
- Flexible centring and adjustable clearance angle

Notes:
Tip height = top edge of the shaft Supplied without knurling wheel

Prod. Gr. 1FP

Knurling tool (series RD2 model 851)

for knurling on lathes and turning machines

Application:
For knurl forming for knurl profiles in accordance with DIN 82 RAA, RBL30°/45°, RBR30°/45°, RGE 30° and RGE 45° in the steel, stainless steel and non-ferrous metals material groups.

Execution:
- hardened steel tool holder, integrated tip height, HSS runner pin

Advantage:
- Available adapter system guarantees high compatibility
- modular design enables right-handed and left-handed knurl press holder
- Inexpensive knurl production
- flexible centring

Notes:
Top edge of the shaft = tip height Supplied without knurling wheel

Knurling tool adjustable (RD2 model 161)

for knurling on lathes and turning machines

Application:
For knurl forming for knurl profiles in accordance with DIN 82 RAA, RBL30°/45°, RBR30°/45°, RGE 30° and RGE 45° in the steel, stainless steel and non-ferrous metals material groups.

Execution:
- Hardened steel tool holder, cemented carbide runner pins

Advantage:
- user-friendly setting of the work areas with a synchronised spindle
- reliable machining even with difficult materials thanks to low lateral contact pressure
- High wear resistance and long service life

Notes:
Ensure correct adjustment of tip height Supplied without knurling wheel

Precision press knurl HSSE-PM with chamfer shape AA (DIN 403)

with chamfers

Application:
For creating knurl profiles in accordance with DIN 82 RAA knurl in steel, stainless steel and NF metal material groups.

Execution:
- hardness: approx. HRC 62-64, teeth milled fine, face sides and hole ground, HSSE PM, 45° chamfer

Advantage:
- High wear resistance
- High hot hardness and compressive strength

Technical information on knurl cutting as PDF download

Access the information directly from your mobile phone

Knurling is a metal-cutting processing with the following advantages:

- Maximum precision and surface quality
- Allows knurling of thin-walled workpieces without deformation
- High cutting speed and fast feed save time
- For universal use in materials
- Low operating forces reduce machine wear

Knurling cutter holder model LA/FL (C601)

For knurl cutting on lathes and turning machines

Application:
For producing knurl cutting profiles in accordance with DIN 82 RAA, RBR 15°, RBL 15°, RBR 30° and RBL 30° in steel, stainless steel, non-ferrous metals and cast iron material groups.

Execution:
- high-strength steel tool holder for one knurl cutter, with cemented carbide bushings

Advantage:
- Compact and robust holder design for high process stability for small components
- User-friendly setting without disassembly
- cemented carbide bushings minimise maintenance costs

Notes:
Supplied without knurling cutter

Prod. Gr. 192

Knurling cutter holder model A1/FL (C611)

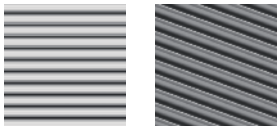
For knurl cutting on lathes and turning machines

Application:
For producing knurl cutting profiles in accordance with DIN 82 RAA, RBR 15°, RBL 15°, RBR 30° and RBL 30° in steel, stainless steel, non-ferrous metals and cast iron material groups.

Execution:
- high-strength steel tool holder, interchangeable head system for one knurl cutter, with cemented carbide bushings

Advantage:
- High flexibility with interchangeable shanks and use as right-hand and left-hand tool on main spindle and counter-spindle
- Clearance-free clamping for high surface quality and service life
- User-friendly setting without disassembly
- cemented carbide bushings minimise maintenance costs

Notes:
Supplied without knurling cutter



RAA 1x30° (R/L)

RBR 15° 1x15° R
RBR 30° 1x90°

RBL 15° 1x15° L

Prod. Gr. 192

Knurling cutter holder model A2/KF (C612)

For knurl cutting on lathes and turning machines

Application:
For producing knurl cutting profiles to DIN 82 RGE 45° and RGE 30° in steel, stainless steel, non-ferrous metals and cast iron material groups.

Execution:
- high-strength steel tool holder, interchangeable head system for two knurl cutters, with cemented carbide bushing

Advantage:
- High flexibility with interchangeable shanks and use as right-hand and left-hand tool on main spindle and counter-spindle
- Clearance-free clamping for high surface quality and service life
- User-friendly setting without disassembly
- cemented carbide bushing ensures low-maintenance work

Notes:
Supplied without knurling cutter

Knurl cutting tool set A1 (C611) and A2 (C612)

Application:
For producing knurl cutting profiles to DIN 82 RAA, RGE 45° and RGE 30° in the steel, stainless steel, non-ferrous metals and cast iron material groups.

Execution:
- **Ident. No. 380:** set comprising: one each of interchangeable FL/KF head, 1 each of shaft 10x16, 12x16, 16x16, with cemented carbide bushings, setting gauge, instructions for use, cutting data and operating key
- **Ident. No. 390:** set comprising: one each of interchangeable FL/KF head, 1 each of 20x25, 25x25 shafts, with cemented carbide bushings, setting gauge, instructions for use, cutting data and operating key

Advantage:
- High flexibility with interchangeable shanks and use as right-hand and left-hand tool on main spindle and counter-spindle
- Clearance-free clamping for high surface quality and service life
- User-friendly setting without disassembly

Prod. Gr. 192

HSSE-PM 15° knurl cutter
For use on knurl cutting tools 19100

Application:
For producing knurls in accordance with DIN 82 RGE 45° (for holders with 2 knurls) and RBR 15° and RBL 15° (for holders with 1 knurl), in the steel, stainless steel, non-ferrous metals and cast iron material groups.

Execution:
- HSSE PM 15°, ground tooth flanks, uncoated

Advantage:
- High precision with ground teeth and good cutting performance, even with difficult materials
- Very good surface quality and long service life with high-quality HSSE-PM cutting material
- **No. 19163–19164:** coating for increased service life requirements

HSSE-PM 90° knurl cutter

For use on knurl cutting tools 19100

Application:

For producing knurls in accordance with DIN 82 RGE 30° (in holders with 2 knurls) and RBL30° or RBR30° (in holders with 1 knurl) in the steel, stainless steel, non-ferrous metals and cast iron material groups.

Execution:

- **No. 19165:** HSSE PM 90°, ground tooth flanks, uncoated
- **No. 19166:** HSSE PM 90°, ground tooth flanks, coated

Advantage:

- High precision with ground teeth and good cutting performance, even with difficult materials
- Very good surface quality and long service life with high-quality HSSE-PM cutting material
- **No. 19166:** coating for increased service life requirements

HSSE-PM 30° knurl cutter

For use on knurl cutting tools 19100

Application:

For producing straight knurls in accordance with DIN 82 RAA (in holders with 1 knurl) in steel, stainless steel, non-ferrous metals and cast iron material groups.

Execution:

- **No. 19170–19171:** HSSE PM 30°, ground tooth flanks, uncoated
- **No. 19172–19173:** HSSE PM 30°, ground tooth flanks, coated

Advantage:

- **No. 19170–19171:**
  - High precision with ground teeth and good cutting performance, even with difficult materials
  - Very good surface quality and long service life with high-quality HSSE-PM cutting material
- **No. 19172–19173:**
  - high degree of precision thanks to ground teeth and good cutting performance, even on hard-to-machine materials
  - excellent finish quality and long service life thanks to high-quality HSSE-PM cutting material
  - coating for increased service life requirements

Troubleshooting guidelines for knurl cutting and knurl pressing

Knurl not parallel

Process	Error	Cause	Solution
Knurl cutting	Spiral formation in RAA profile / knurl not parallel	1. Tip height is not correct 2. Clearance angle is not correct 3. Knurled head position is not correct	1. Read the operating instructions 2. Correction of tip height 3. Correction of clearance angle 4. Correction of knurled head position
Knurl forming	Spiral formation in RAA profile / knurl not parallel	1. Tip height is not correct 2. Deflection of the workpiece 3. Clearance angle is not correct 4. Feed selected too high	1. Read the operating instructions 2. Correction of tip height 3. Correction of clearance angle 4. Support the workpiece 5. Correction of adjustment parameters

Incorrect contour formation of the knurl

Process	Error	Cause	Solution
Knurl cutting	Radius formation in tooth base	1. Tip height is not correct	1. Read the operating instructions 2. Correction of tip height
Knurl cutting / forming	Surface on tooth tip	1. Infeed depth is not sufficient	1. Read the operating instructions 2. Increase infeed depth until tips are distinct

Over-pressurised profile, diameter reduction

Process	Error	Cause	Solution
Knurl cutting / forming	Over-pressurised profile, diameter reduction	1. Infeed depth selected too high	1. Read the operating instructions 2. Correction of infeed depth (plus correction)

An increase in diameter must always be observed in the forming and cutting process!
Forming process: Pitch- / material-dependent diameter increase
Cutting process: Diameter increase up to max. 0.1 mm

Tooth breakage

Process	Error	Cause	Solution
Knurl cutting / forming	Tooth breakage	1. Tensile strength of the material too high 2. Hardness of the material too high	1. Knurl cutting: Fitting of 10° chamfer on the knurling wheel 2. Knurl forming: Fitting of 60° chamfer on the knurling wheel

Non-uniform marking pattern

Process	Error	Cause	Solution
Knurl forming	Non-uniform marking pattern of the knurling profile	1. Material bending 2. Projection of the workpiece	1. Correction of the knurling holder position up to max. 1° 2. Set tool in the centre of the area of the workpiece to be machined

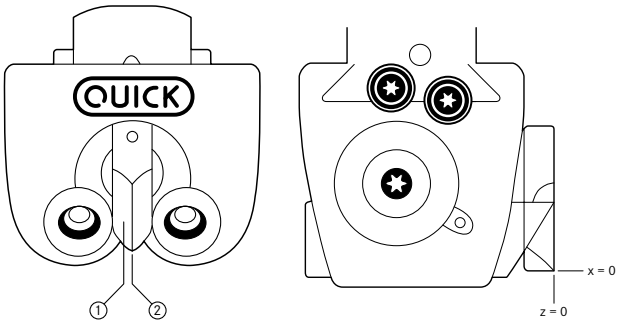
Installation and adjustment instructions for knurl cutting
Tool presetting and procedure

Tool presetting

All QUICK tools that are suitable for use on CNC machines can be measured optically with a dedicated setting gauge on pre-setting devices. This setting gauge is supplied with every CNC tool.

KF tools

Default settings for KF tools



① Setting gauge ② Tip height

Procedure for KF tools

1. Disassemble knurl cutters and liners
2. Set part drum to the smallest diameter
3. Mount setting gauge on clamping segment
4. Set the centre of rotation with the threaded spindle in the shank
5. The X and Z values can now be read off on the pre-setting device

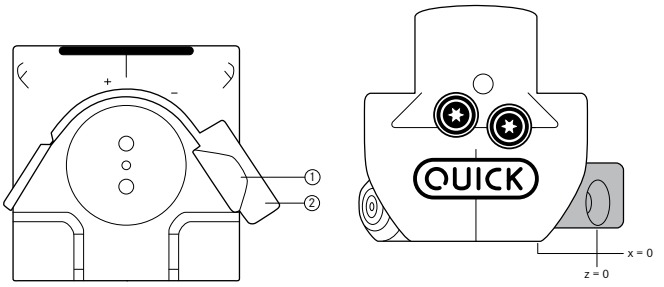
The measured Z value is the beginning of the knurl, not the collision dimension. For A1/KF tools, the measured X value is adopted with a workpiece diameter of 5 mm; for A2/KF tools, it is adopted at 8 mm without correction value. Depending on the workpiece diameter, the dimensions specified in the table must be added to the X-values. With this dimension, the cutters are approx. 0.2 - 0.3 mm over the diameter to be knurled. The exact setting of the tool must be made on the machine.

Correction value table for A2/KF (radius values):

Ø	X+	Ø	X+	Ø	X+
5	0	10	0,9	23	1,8
6	0,3	13	1,2	31	2,1
8	0,6	17	1,5	50	2,5

FL tools

Default settings for FL tools



① Tip height ② Setting gauge

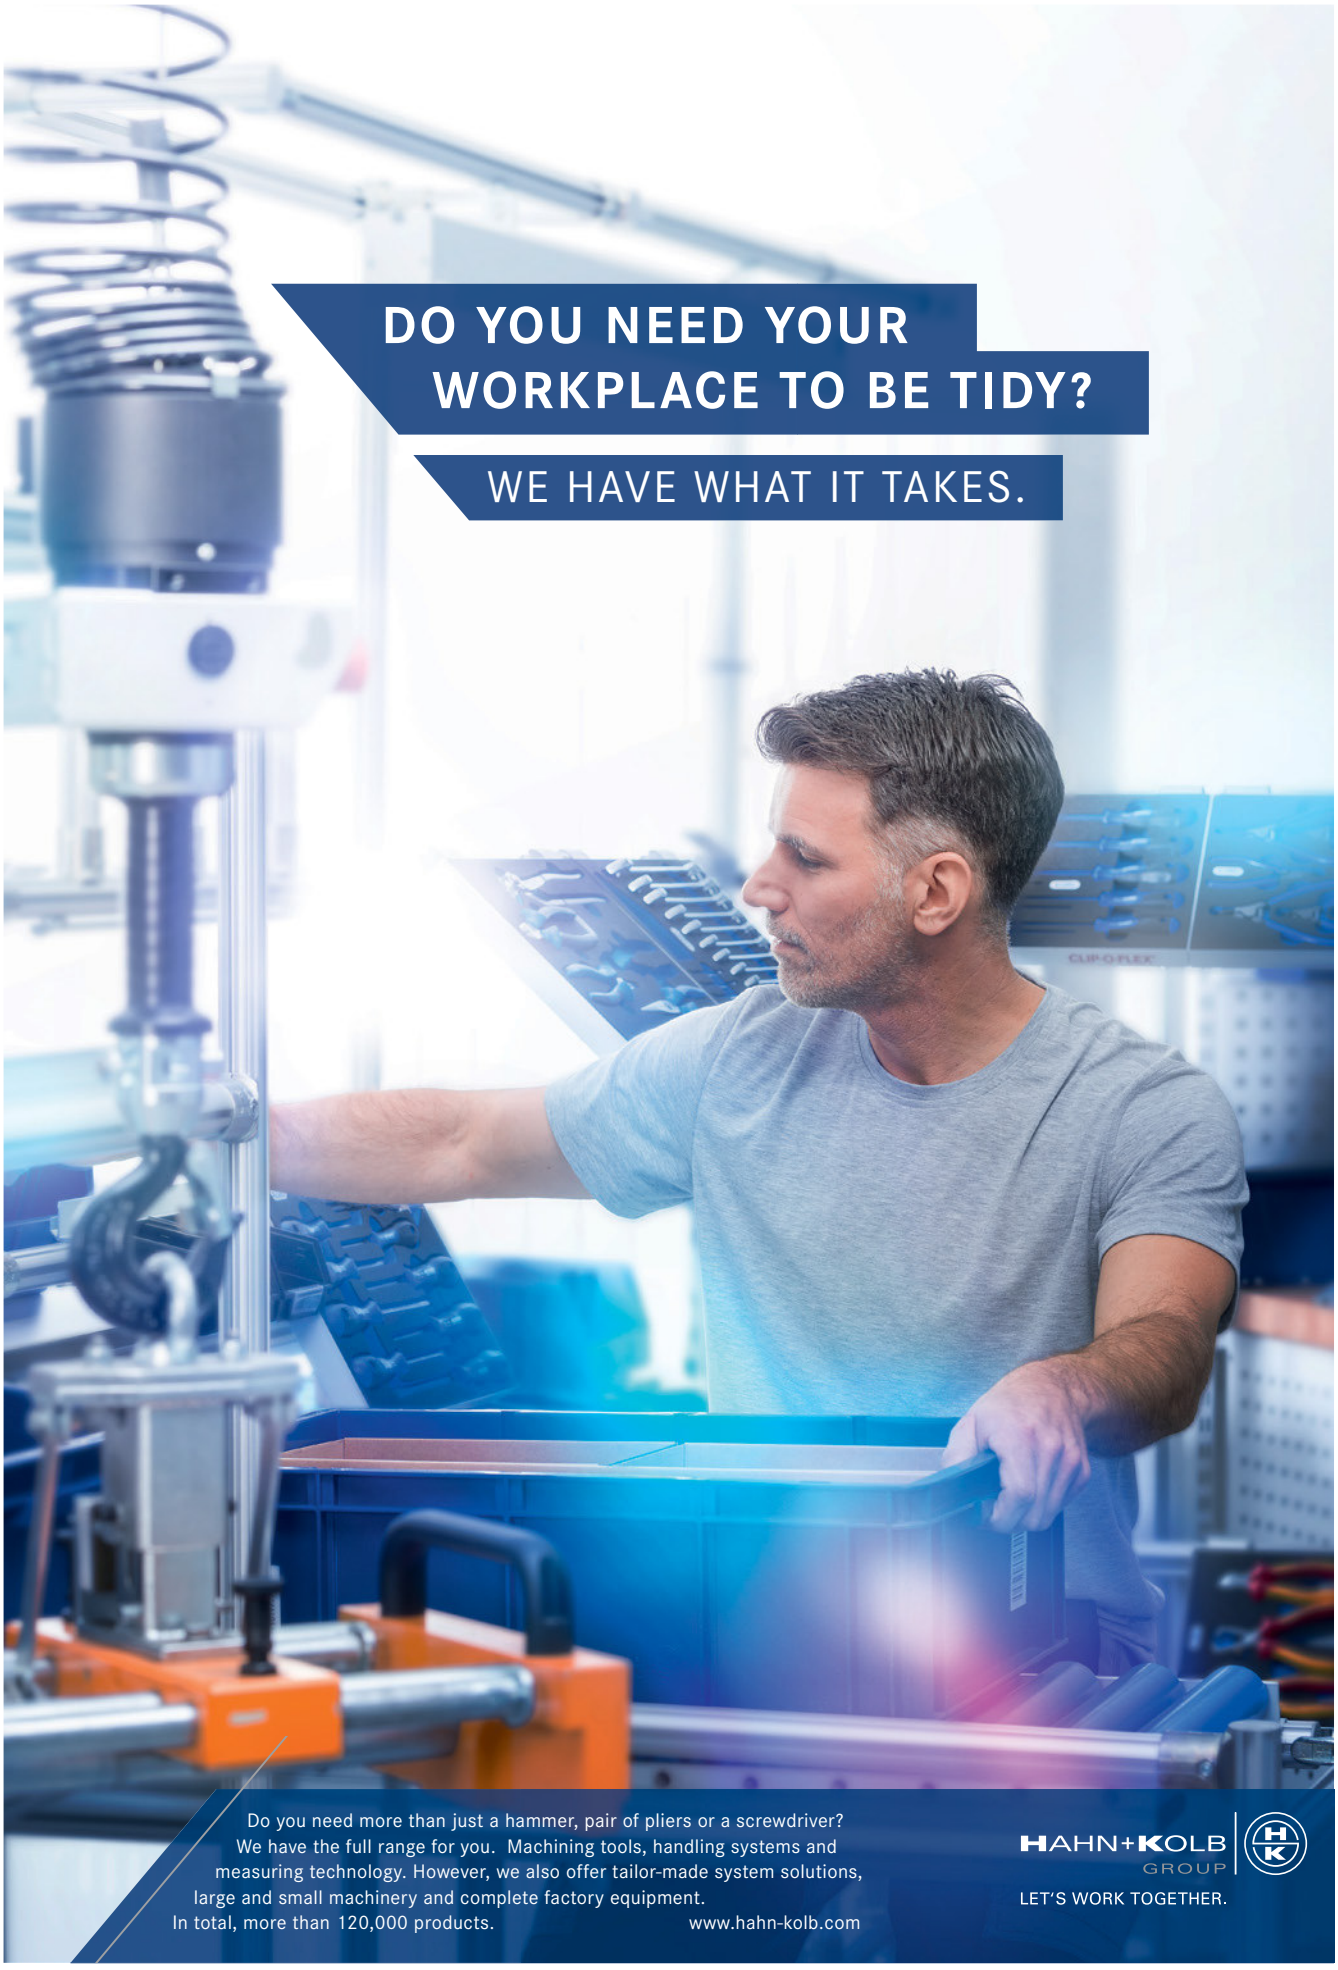
Procedure for FL tools

1. Disassemble knurl cutters and liners
2. Mount setting gauge in place of the liner
3. Set the centre of rotation with the threaded spindle in the shank
4. The X and Z values can now be read off on the pre-setting device

The measured Z value is the beginning of the knurl, not the collision dimension. If the measured X-value is programmed, the knurl cutter is approx. 0.2 - 0.3 mm above the diameter to be knurled and the exact setting must be made on the machine.

Correction value table for A1/KF (radius values):

Ø	X+	Ø	X+	Ø	X+
8	0	27	1,9	80	3,2
11	0,3	35	2,2	120	3,5
14	0,6	45	2,5	150	3,6
16	0,9	55	2,8	200	3,7
19	1,2	65	3,0	250	3,8



DO YOU NEED YOUR WORKPLACE TO BE TIDY?
WE HAVE WHAT IT TAKES.
Do you need more than just a hammer, pair of pliers or a screwdriver? We have the full range for you. Machining tools, handling systems and measuring technology. However, we also offer tailor-made system solutions, large and small machinery and complete factory equipment. In total, more than 120,000 products.

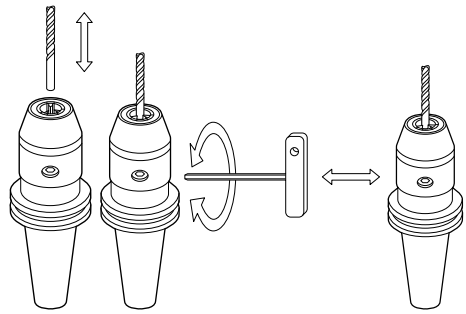
ATORN drill chucks — components and functional principle

① Open the clamping jaws anti-clockwise to insert the respective cutter.
② The cutter must be pushed in all the way to the stop, so that the tool shaft is against the entire length of the clamping jaws. (Caution: Do not clamp conical shafts, as there is a risk of accident!)
③ Turn the key clockwise to the specified tightening torque, to properly clamp the tool. Extensions or tightening aids must not be used, as too much tightening torque can break the bevel gear drive. Here, the pinion serves as a predetermined breaking point to avoid more significant damage to the drill chuck.
④ Once it has been verified that the cutter is clamped correctly and centred, the drill chuck is ready for use.



Secure clamping:
All ATORN drill chucks are clamped with a hexagonal cross handle key via a bevel gear drive at the side. The key is turned clockwise to clamp the drill chuck. The drill chuck is opened in the anti-clockwise direction (see markings on the pinion bore). Step-by-step instructions can be found in the respective operating instructions.

Care and maintenance:
ATORN drill chucks are maintenance free. After use, the drill chucks should be wiped with a clean cloth. Before storing, the drill chucks should be oiled to prevent corrosion.
Caution: Do not use compressed air to clean drill chucks as fine chips can enter the clamping mechanism. The drill chucks must not be cleaned with solvents or cleaners containing solvents, as these can cause corrosion.

ATORN drill chuck and micro universal chuck - specifications

ATORN standard	Drill chuck
Clamping range	0.5-16 mm
Maximum concentricity deviation	< 0.02 mm (*)
Tightening torque in relation to concentricity deviation	15 Nm
Transferable torque	45 Nm (**)
Maximum permissible tightening torque	20 Nm
Transferable torque at maximum permissible tightening torque	90 Nm (**)
Maximum permissible speed	35,000 rpm (***)

1.5 Nm	3 Nm
4.5 Nm (**)	9 Nm (**)
2 Nm	4 Nm
7 Nm (**)	12 Nm (**)
60,000 rpm (***)	60,000 rpm (***)

(*) Check of concentricity deviation according to test protocol “Precision”

(**) All CNC drill chucks are clamped via a lateral bevel gear using a T-handle hex key. A torque of 8 Nm or 15 Nm is sufficient when tightening a drill chuck using a T-handle hex key. The higher holding torques achievable with the CNC drill chucks are additional an additional safety margin and therefore not necessary for normal use.

(***) When “unbalanced”, the CNC drill chucks are suitable for use up to 7000 rpm. For applications at speeds of exceeding 7,000 rpm (to max. 35,000 rpm), such as in aluminium or wood processing, the drill chuck must also be balanced according to the balancing classes, taking into account the speed and balancing quality.

(*) Check of concentricity deviation according to test protocol “MICRO universal chuck”.

(**) All MICRO universal chucks are fitted with a hexagonal T-key on the side via a bevel gear.
A torque of 1.5 Nm (MICRO 03) or 3 Nm (MICRO 06) is sufficient when tightening a MICRO universal chuck using a T-handle hex key. The higher holding torques achievable with the MICRO universal chucks are additional security and are not necessary for normal use.

(***) When “unbalanced”, the MICRO universal chucks are suitable for use up to 18,000 rpm. For applications at speeds of over 18,000 rpm to 60,000 rpm (such as in aluminium or wood processing), the MICRO universal chucks must also be balanced as per the balancing classes, taking into account the speed and balancing quality.

ATORN precision collet chucks
maximum concentricity for optimum surface quality and maximum tool life

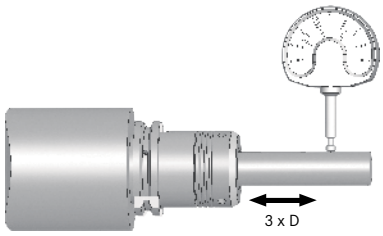

fig. 1

total concentricity on ATORN precision collet chuck 3 µm (fig. 1)
- high-gloss polished surface
- precision collet chuck without clamp bridge
- collet chuck sits completely in the inner taper of the collet chuck (tolerance in µ range) **(Figure 2)**
- collet chuck and clamping nut with a 30° trapezoidal thread ① and two cylindrical guides form a single unit ②.

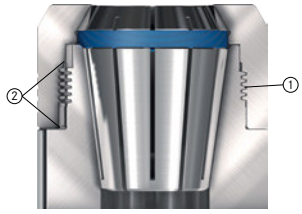

Fig. 2
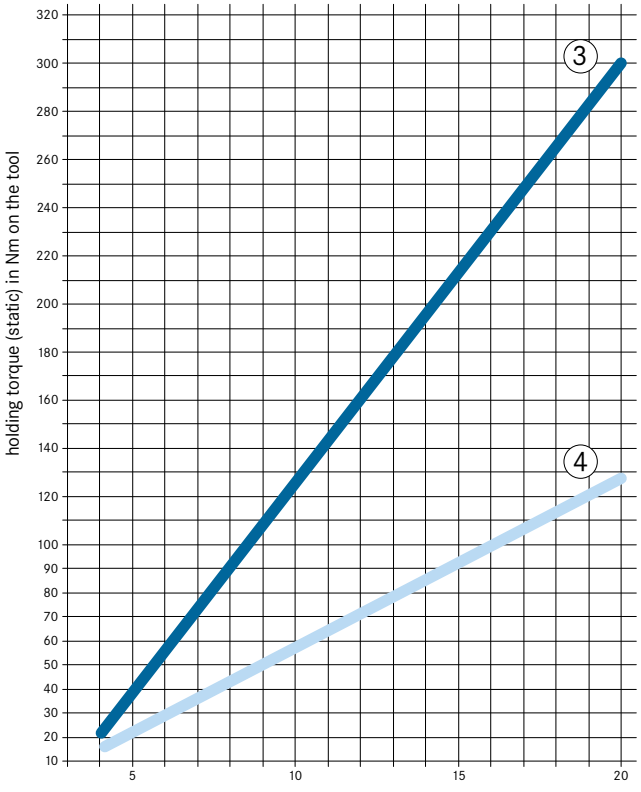
with ATORN UP 2 µm or Fahrion 2 µm HP collet chuck

all of these innovations have led to the following advantages compared with other systems:
- more uniform engagement of all cutting edges
- longer tool life
- optimised surface
- fewer chatter marks
- minimised vibration
- higher cutting data
- **system concentricity ≤ 3 µm**



③ ATORN precision collet chuck 160 Nm Ø 12 mm
④ standard collet chuck ER32 69 Nm Ø 12 mm

ATORN hydro expansion chucks — advantages

our hydro expansion chucks or HPH (High Performance Holders) with axial and radial length adjustment are used on woodworking and metalworking machines with rotating tools. depending on the type of use, various versions are available, e. g.:

- **automatic tool change chucks in acc. with:** ISO 7388-1 (DIN 69871); DIN 69893-A, DIN 69893-F, DIN 69893-E and ISO 7388-2 (JIS B6339)

Advantages of the ATORN hydro expansion clamping technology:

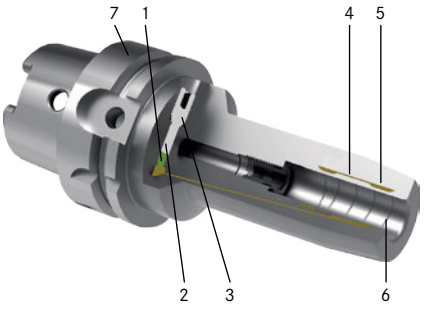
- Tool change in the shortest possible time
- High concentricity
- Vibration-damping tool clamping
- Increased tool service life
- Reduction of micro abrasions on the tool cutting edge
- Improvement in surface quality
- Reducing sleeves allow flexible use
- Low maintenance requirements through closed clamping system
- Easy operation
- High torque transmission
- Design corresponds to DIN 69882-7
- High positioning accuracy and repeatability
- Tool clamping with excellent concentricity (maximum 3 µm)
- Continual further development
- Products certified according to DIN EN ISO 9001:2008, manufactured in Germany

ATORN 3 degree hydro expansion chuck ultra-slim 3D-printed design

ATORN hydro expansion clamping technology — elements and functional principle

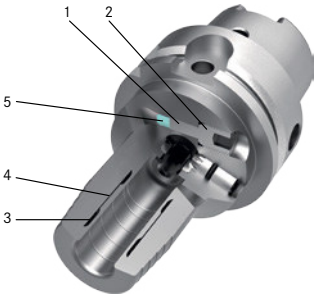
Elements of the hydro expansion clamping technology:

① Sealing element; leakage at the clamping bore is prevented by the sealing lip.
② Clamping piston; presses the hydraulic medium into the chamber system.
③ Clamping screw; tightening to operate the clamping piston can be done without a torque wrench.
④ Expansion sleeve; clamps the tool shaft centrally with even pressure.
⑤ Chamber system; is formed through the connection between expansion sleeve and basic body. Has a dampening effect on the tool through the hydraulic medium, which therefore reduces wear.
⑥ Groove; residual oil, grease or lubricant is forced into the groove by the high clamping pressure. The clamping surfaces remain largely dry, which ensures proper transfer of torque.
⑦ Basic body; ATORN hydro expansion chucks are available for all common machine interfaces (HSK-A, HSK-C, HSK-E, HSK-F, SK, BT and flange module).



Functional principle

When clamping with hydro expansion technology, an even pressure is built up within a closed chamber system by means of a clamping screw and clamping piston. The integrated expansion sleeve transfers this pressure to the tool.

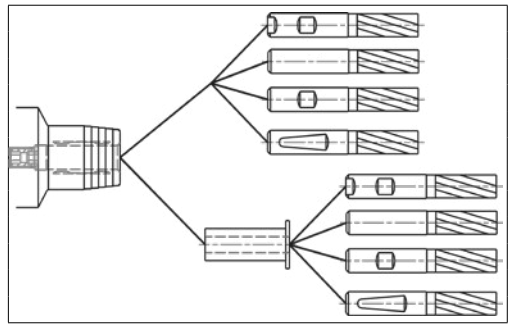


① The clamping screw is screwed in with a hexagon key until it stops.
② The clamping piston pushes the hydraulic medium into the
③ expansion chamber and causes an increase in pressure.
④ The thin-walled expansion sleeve curves evenly against the tool shaft. In this clamping process, the tool shaft is first centred and then clamped firmly over its full surface.
⑤ The sealing element ensures a perfect seal and a long service life.

ATORN hydro expansion chuck – technical data

technical data:

- material 1600-1800 N/mm² tensile strength
- hardness 52 + 2HRc
- balanced holder
- laser marked
- max. speed 40,000 rpm (observing limit speed, interface, precision balancing recommended!)
- operating temperature 20-50°C; higher temperatures on request, do not use above 80°C
- maximum coolant pressure 80 bar
- adjustment path 10 mm
- clamp shafts (tolerance h6) with and without reducing sleeves:
  - DIN 1835 Form A, B, C, D
  - DIN 6535 Form H, HB, HE



permissible transferable torques with direct clamping

clamping diameter in mm	6	8	10	12	14	16	18	20	25	32

ATORN shrink technology - benefits

The shrink technology uses heat-induced expansion for tool clamping. An induction coil heats the shrink-fit chuck. The chuck expands and the cold tool shaft can be inserted. The shrink-fit chuck is cooled down again, contracts and forms a friction-locked connection with the tool due to the oversize at the tool shaft.

Advantages:

- Simple tool holder design
- High concentricity in tool clamping
- Reliable power transmission
- Slim design
- Efficiency
- High torque transfer
- Long service life and temperature resistance thanks to the use of high-strength heat-resistant steel
- Distortion-free thanks to optimal heat treatment
- Optimum balancing quality
- From a clamping diameter of 6 mm, standard threaded hole for balancing
- Design complies with DIN 69882-8
- High positioning and repeat accuracy
- Ensures maximum concentricity - maximum 3 µm
- Laser marking for secure product traceability
- Certified products according to DIN EN ISO 9001:2008 - manufactured in Germany
- Flexible shrink-fit system thanks to the use of ATORN shrink-fit extensions
- Stop screw adjustable on both sides

ATORN shrink-fit chuck - functional principle

ATORN shrink-fit chucks are used on woodworking and metalworking machines with rotating tools. Shrink-fit chucks use heat-induced expansion to clamp tools. The application areas for these chucks range from a wide variety of milling tasks to heavy-duty machining, woodwork and drilling. ATORN shrink-fit chucks are produced with an internal coolant feed as a standard feature.

Selected product groups in the range additionally feature flange cooling. Custom designs featuring lateral coolant bores are available on request.

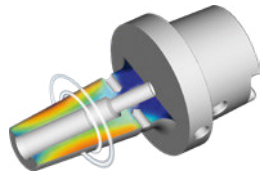
For automatic tool changing, ATORN shrink-fit chucks are available in the following versions: ISO 7388-1 (DIN 69871), DIN 69893-A, DIN 69893-E, DIN 69893-F and ISO 7388-2 (JIS B6339).

Functional principle:

① **Chuck warming:** Specifically the clamping point of the chuck is heated using state-of-the-art induction technology. An induction coil generates rapidly varying eddy currents, which directly affect the shrink-fit chuck and specifically heat the point that holds the tool shaft. The bore diameter expands.

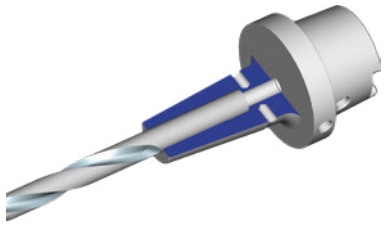
② **Insert the tool shaft:** The cold tool shaft is inserted into the heated shrink-fit chuck.

③ **Cooling:** The shrink-fit chuck is cooled, the clamping diameter returns to its initial dimension and clamps the tool shaft. A powerful device with water-cooled heat sinks allows rapid cooling within 30 seconds. This means neither the taper nor the data chips will heat up. Extensions or non-standard shrink-fit chucks can be cooled using adapters in the heat sinks.



The result:

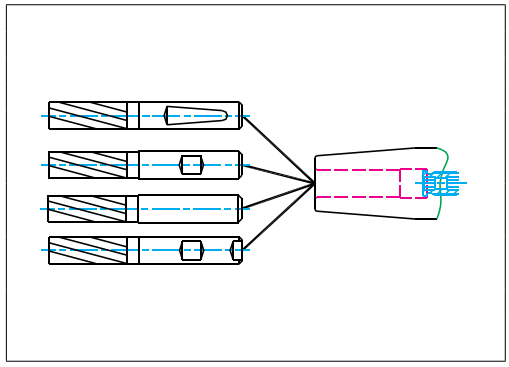
Inductive heating allows for tool changes in seconds. Shrink-fit chuck and tool shaft form a friction-locked connection. Carbide and even HSS tools can be clamped. The tool fits precisely into the tool chuck with maximum clamping force.



ATORN shrink-fit chuck - specifications

Specifications:

- Material 1600-1800 N/mm² tensile strength
- Hardness 52 + 2HRc
- Balanced holder by default
- Laser labeller
- Max. speed 40,000 rpm (compliance with limit speed, interface and precision balancing recommended!)
- Shrink temperature 100-420°C
- Maximum shrink temperature 500°C
- Maximum coolant pressure 80 bar
- Adjustment travel 10 mm, can be adjusted on both sides
- Can be clamped: cylinder shafts tolerance outside diameter h6
- Clamping and removal of carbide and HSS tools when using the corresponding shrinking devices



Maximum transferable torque for direct clamping

Clamping diameter in mm	3	4	5	6	8	10	12	14	16	18	20	25	32

Chuck application overview

Chuck/tool chuck for cylindrical tool shanks	Shrink-fit chuck	Hydro expansion chuck	Surface chuck (Weldon)	Collet chuck, Type ER
Properties	▪ Maximum concentricity ▪ Very slim interfering contour ▪ Good rigidity ▪ high clamping force ▪ Can be extended modularly	▪ High attenuation at the highest concentricity ▪ easy to handle ▪ Flexible use due to reducing sleeves	▪ Robust, affordable chuck for heavy machining in lower rotation speed and accuracy range	▪ Very flexible chuck for a wide range of shaft dimensions and tolerances ▪ For different machining tasks
Primary application	▪ Drilling ▪ Countersinking ▪ Milling ▪ Grinding ▪ Threads ▪ Universal and HSC applications	▪ Medium machining ▪ Reaming ▪ Drilling ▪ Countersinking ▪ HSC application	▪ Rough machining ▪ Milling ▪ Drilling ▪ Threads	▪ Medium machining ▪ Centring ▪ Chamfering ▪ Drilling ▪ Threads ▪ Intermediate shafts
Main property	▪ Precise and universal ▪ slim ▪ high clamping force	▪ easy to handle	▪ simple operation ▪ Safe voltage	▪ high flexibility
Concentricity	< 3 µm	< 3 µm	< 10 µm	< 10 µm
With 5xD	< 5 µm	< 5 µm	< 25 µm	< 25 µm
Clamping force	Very high	Very high	Very secure	Medium
Rigidity	Very high	high	Very high	low
Attenuation	low	Very high	low	high
Interference contour	small/micro	Medium	large	Large (mini = small)
Handling	good	Very good/very flexible	good	good
Actuation	Shrink fit machine	Hexagonal key	Hexagonal key	Hook wrenches

Hollow shank taper tools
For automatic and manual tool exchange

Tool holder HSK-32/40/50/63/80/100 shape A to F

To prepare a quotation, we require the size of your spindle and relevant tool holder.

Advantages vis-à-vis steep taper:

- **High rigidity:** considerably greater bending resistance is achieved with the same tool sizes as a result of the support at the collar (planar contact face).
- **Excellent change precision:** the flange attachment facilitates axial positioning precision in the µm range. The form-fit, tight taper tolerance prevents any radial run-out.
- **Good torque transmission:** the hollow shank taper is held in the receiving spindle so that torque transmission is possible as a result of friction contact. 2 carrier blocks also engage in the slots at the shank end.
- **Ideal for high rotation speeds:** The spindle expands at high rotation speeds due to centrifugal force This could cause the steep taper to slip in the spindle and jam. This is prevented by the planar contact face. In addition, the clamping elements are pushed outwards by centrifugal force which increases the clamping force.
- **Integrated tool system:** the hollow shank taper was designed for both stationary and rotating tool chucks. This enables the tool holders to be used on milling machines and lathes and as modular tools.

ATORN Weldon surface chucks (ISO 12164-1)

HSK 100 | HSK 63 | Form A | IK | G 2,5 25000 rpm | DIN 69893 | ISO 12164-1

Application:

Ident. No. 600–645: For clamping tools with straight shank and clamping surface in accordance with DIN 1835 B.

Ident. No. 646–689: For clamping tools with a straight shank and clamping flat in accordance with DIN 1835 B.

Execution:

- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- All functional surfaces are machined
- With Balluff chip hole
- **Ident. No. 600–645:** Alloyed case-hardening steel with core tensile strength of at least 950 N/mm²
- **Ident. No. 646–689:** Alloyed case-hardening steel with a core tensile strength of at least 950 N/mm²

Delivery:

Ident. No. 600–645: 1x HSK63 or HSK100 surface chuck (Weldon) (ISO 12164)

Ident. No. 646–689: 1x surface chuck (Weldon) HSK 63 or HSK 100 (ISO 12164)

Notes:

The previous standard DIN 69871 was superseded by ISO 12164.

ATORN Surface chuck (Weldon) (ISO 12164-1)

KKB= resealable cooling duct holes

HSK 100 | HSK 63 | Form A | G 2,5 25000 rpm | DIN 69893 | ISO 12164-1

Application:
For clamping tools with straight shank and clamping surface in accordance with DIN 1835 B.

Execution:
- Alloyed case-hardening steel with core tensile strength of at least 950 N/mm²
- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- All functional surfaces are machined
- With Balluff chip hole

Delivery:
1x surface chuck (Weldon) HSK 63 or HSK 100 (ISO 12164)

Notes:
The previous standard DIN 69871 was superseded by ISO 12164.

Ident. No. 690–734

With KKB= resealable coolant bores

ORION® Surface chuck (Weldon) HSK-A (DIN 69893-1)

HSK 63 | Form A | IK | G 6,3 15000 rpm | DIN 69893

Application:
For clamping tools with straight shanks and clamping surfaces in line with DIN 1835 B.

Execution:
- All tapers and tolerances are precision-ground.
- Taper tolerance AT3.
- Strength HRC 57-60.
- Core strength 1,000-1,200 N/mm².
- With Balluff chip hole.
- All functional surfaces machined.

Advantage:
- Prevents the tool from slipping while maintaining high concentricity.

Delivery:
1x surface chuck (Weldon) in accordance with ISO 12164 (DIN 69893).

ATORN Tool holder for indexable insert drill bit shape E1 (ISO 12164-1)

HSK 100 | HSK 63 | Form A | IK | G 2,5 25000 rpm | DIN 69893

Application:
This chuck is used to clamp indexable insert solid drill bits that are fixed with two screws, similar to a surface chuck.

Execution:
- Alloyed case-hardening steel, core tensile strength at least 950 N/mm²
- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm, black oxide finish
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- Max. concentricity < 0.005 mm

Delivery:
1x HSK63 or HSK100 solid drill chuck (ISO 12164)

Notes:
The previous standard DIN 69871 was superseded by ISO 12164.

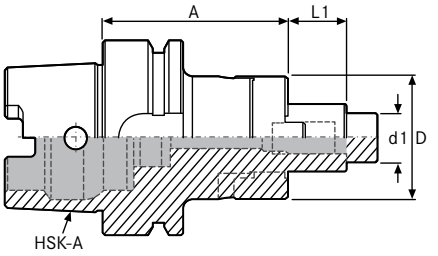
ATORN Combination shell end mill arbours (DIN 6358) (ISO 12164-1)

HSK 100 | HSK 63 | Form A | IK | G 2,5 25000 rpm | DIN 69893



Application:
For holding shell end mills and single angle milling cutters with longitudinal groove in accordance with DIN 842.

Execution:
- Alloyed case-hardening steel, core tensile strength at least 950 N/mm²
- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- All functional surfaces are machined
- Max. concentricity < 0.005 mm
- With Balluff chip hole
- Internal cooling with A dimension of 160 mm and 200 mm only

Delivery:
1x HSK63 or HSK100 combination shell end mill arbour (ISO 12164); incl. retaining screw, key and drive ring

Notes:
The previous standard DIN 69871 was superseded by ISO 12164.

ATORN Transverse drive shell end mill arbour DIN 6357 (ISO 12164-1)

Increased collar diameter (face mill arbour)

HSK 63 | Form A | IK | G 2,5 25000 rpm | DIN 69893

Application:
For accommodating shell end mills and angular milling cutters with longitudinal groove in accordance with DIN 842.

Execution:
- Alloyed case-hardening steel, core tensile strength at least 950 N/mm²
- Internal coolant supply
- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm

- Max. concentricity < 0.005 mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- With Balluff chip hole

Delivery:
1x HSK63 or HSK100 transverse drive shell end mill arbour (ISO 12164); with retaining screw

Notes:
The previous standard DIN 69871 was superseded by ISO 12164.

ATORN CNC precision short drill chuck (DIN 69893-1)

With spur gear mechanism

HSK 63 | Form A | IK | R/L | G 6,3 25000 rpm | DIN 69893

Application:
For use on machining centres and CNC milling machines with tool change. For drilling, reaming, countersinking and also light milling and smoothing tasks.

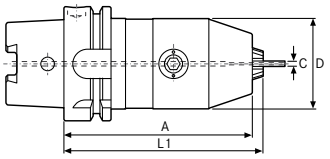
Execution:
- Shank in accordance with DIN 69893, HSK shape A
- Integrated spur gear ensures high retaining torque
- Glass bead blasted

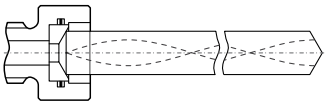
Advantage:
- Wear parts hardened and polished for a long service life
- Remains securely clamped even if the spindle stops suddenly

Delivery:
1x HSK63 precision drill chuck (ISO 12164)

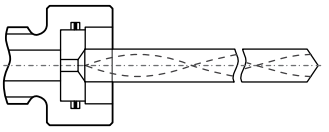
Notes:
The previous standard DIN 69871 was superseded by ISO 12164.

With IC





(1) Sealing washer ATORN 16 (dia. 4.2 mm) integrated in the drill chuck head, for cooling channel drills dia. 6-16 mm with smooth shaft in accordance with DIN 6535, shape HA.



(2) Sealing washer ATORN 16 (dia. 2.05 mm) included, for cooling channel drills dia. 3-6 mm with smooth shaft in accordance with DIN 6535, shape HA.

BIG DAISHOWA Hi-Power high-performance power chuck HSK-A63 (DIN 69893-1)

High-performance power chuck

HSK 63 | G 6,3 15000 rpm | Form A | DIN 69893

Application:
The high-performance power chuck combines high precision with high torque transmission and rigidity. Perfect for use in heavy machining during milling, but also for drilling and fine drilling operations.

Execution:
- High clamping force thanks to special slotted design and needle bearing.
- Very high clamping force.
- High rigidity for heavy machining.
- High-precision concentricity.
- With Balluff chip hole.

Advantage:
- Various applications when used with reduction sleeves ref. no. 23336450-455.
- Perfect for heavy machining.

Delivery:
1x high-performance power chuck in accordance with ISO 12164 (DIN 69893).

Notes:
For clamping the BIG DAISHOWA Hi-Power high-performance power chuck,
use hook wrench art. no. 23297010.
We stock all other BIG DAISHOWA articles and versions.

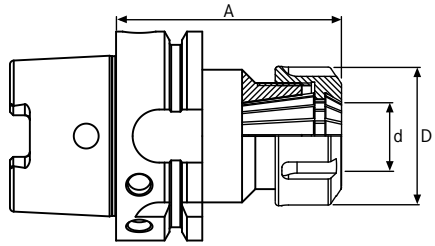
ATORN Collet chuck type ER DIN 6499 (ISO 12164-1)

HSK 100 | HSK 63 | Form A | IK | G 2,5 25000 rpm | DIN 69893 | ISO 12164-1

Ident. No. 495–509



p. 874

Application:
For clamping tools with straight shank in ER collet chucks in accordance with DIN 6499.

Execution:
- Alloyed case-hardening steel, core tensile strength at least 950 N/mm²
- Internal coolant supply
- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- With Balluff chip hole
- All functional surfaces are machined
- All ER16 collet chucks feature a hexagon nut

Delivery:
1x HSK63 or HSK100 ER collet chuck (ISO 12164)

Notes:
The previous standard DIN 69871 was superseded by ISO 12164.

BIG BIG DAISHOWA Hi-Power high-performance power chuck HSK-A63 (DIN 69893-1)

High-performance power chuck

HSK 63 | G 6,3 15000 rpm | Form A | DIN 69893

Application:
The high-performance power chuck combines high precision with high torque transmission and rigidity. Perfect for use in heavy machining during milling, but also for drilling and fine drilling operations.

Execution:
- High clamping force thanks to special slotted design and needle bearing.
- Very high clamping force.
- High rigidity for heavy machining.
- High-precision concentricity.
- With Balluff chip hole.

Advantage:
- Various applications when used with reduction sleeves ref. no. 23336450-455.
- Perfect for heavy machining.

Delivery:
1x high-performance power chuck in accordance with ISO 12164 (DIN 69893).

Notes:
For clamping the BIG DAISHOWA Hi-Power high-performance power chuck,
use hook wrench art. no. 23297010.
We stock all other BIG DAISHOWA articles and versions.

ATORN Collet chuck type ER with miniature nut DIN 6499 (ISO 12164-1)

Slimline version

HSK 63 | Form A | IK | G 2,5 25000 rpm | DIN 69893 | ISO 12164-1

Application:
For clamping tools with a straight shank in ER collets in accordance with DIN 6499.

Execution:
- Alloyed case-hardening steel, core tensile strength at least 950 N/mm²
- Internal coolant supply
- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm

- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- With Balluff chip hole
- All functional surfaces are machined

Delivery:
1x HSK63 ER miniature collet chuck (ISO 12164)

Notes:
The previous standard DIN 69871 was superseded by ISO 12164.

ATORN Hydraulic expansion chuck 3°, ultra-slim (ISO 12164-1)

3D-printed

HSK 63 | Form A | IK | G 2,5 25000 rpm | ≤0,003 | DIN 69893

Application:
Produced using an innovative process, the ultra-slim hydro expansion chuck combines the advantages of an expansion chuck and a shrink-fit chuck in a single product.

Execution:
- Extremely high clamping forces
- Extremely high temperature resistance (up to 120 °C) ensures that the chuck retains its accuracy
- Slim shrink-fit chuck-style design makes it suitable for narrow interference contours
- Excellent damping properties
- Standard tool changes as with expansion chucks without requiring additional devices
- Reducer bushings enable various applications
- With Balluff chip hole

Delivery:
1x ultra-slim HSK63 hydraulic expansion chuck (ISO 12164)

Notes:
The previous standard DIN 69871 was superseded by ISO 12164.

ATORN Precision collet chuck (DIN 69893-1)

HSK 63 | Form A | IK | G 2,5 25000 rpm | DIN 69893

Application:
For clamping tools with straight shanks without loss of concentricity or clamping force up to shank tolerance h10, for economic machining of individual and series parts with extremely high-precision machining results. Ideal for HPC and HSC machining.

Execution:
- 30° trapezoidal thread with polished, extra-long double guide with special anti-friction coating for less friction
- Clamping forces are evenly distributed across the entire cylindrical shell surface and perfect surfaces are achieved due to optimally absorbed radial forces
- Precise centring when tightening the clamping nut
- Suitable torque wrench attachments 23360 960-966, torque wrench is recommended, suitable collet chucks type ER no. 23323 617-658

Advantage:
- Resistant to fluctuations in temperature and entirely suitable for drying processes and hard milling up to 200 °C
- Reinforcement of the chuck body over the diameter of the clamping nut ensures outstanding stability with an optimum interference contour
- Extremely low system concentricity of < 3 µm with the 2 µm ATORN UP collets. With Fahrion 2 µm HPD sealed collets to 80 bar for internal cooling (without sealing washer)
- Completely enclosed in the chuck cone for optimum stability and even distribution of clamping forces
- Retention force twice that of conventional collet chucks

Delivery:
1x HSK63 ER precision collet chuck (ISO 12164)

Notes:
The previous standard DIN 69871 was superseded by ISO 12164.

ATORN Shrink-fit chuck HSK A-63 4.5 degrees (DIN 69893-1)

HSK 63 | Form A | IK | G 2,5 25000 rpm | ≤0,003 | DIN 69893

Application:

Ident. No. 003–025: For clamping milling tools and drill bits with straight shank, tolerance h6. Suitable for shrinking on inductive contact and hot air devices.

Ident. No. 103–332: For clamping cutters and drills with straight shank with h6 tolerance. Suitable for shrinking onto inductive contact and hot air devices.

Execution:

- Heat-resistant and high-temperature tool steel 1,600-1,800 N/mm²
- Hardness 52 + 2 HRC
- Maximum coolant pressure 80 bar
- Adjustment travel 10 mm, can be adjusted on both sides
- Shrink grip and shrink release of carbide and HSS tools
- 4 additional drill holes for fine balancing
- With Balluff chip hole

Advantage:

- High positioning and repeat accuracy
- Ideal for high rotation speeds
- Slim design with minimal interference contour
- Very high torque transfer
- Ideal for HSC machining

Delivery:

1x HSK63 shrink-fit chuck (ISO 12164)

Notes:

The previous standard DIN 69871 was superseded by ISO 12164.

Prod. Gr. 287

ATORN Shrink-fit chuck, 4.5 degrees (with KKB) (DIN 69893-1)

With resealable coolant bores (KKB)

HSK 63 | Form A | G 2,5 25000 rpm | ≤0,003 | DIN 69893

Application:

For clamping cutters and drills with straight shanks in h6 tolerance. Suitable for shrinking onto inductive contact and hot air devices.

Execution:

- Guarantees maximum concentricity of 0.003 mm
- Shrink grip and shrink release of carbide and HSS tools
- Hardness 52 + 2 HRC
- Maximum coolant pressure 80 bar
- Adjustment travel 10 mm, can be adjusted on both sides
- 4 additional drill holes for fine balancing
- With Balluff chip hole
- Resealable coolant bores
- Geometry significantly improves damping behaviour

Advantage:

- High transmittable torques
- High chip removal rate, perfect for HSC machining
- Protects the spindle and machine
- Ideal for high rotation speeds
- Improved surface quality

Delivery:

1x HSK63 shrink-fit chuck (ISO 12164)

Notes:

The previous standard DIN 69871 was superseded by ISO 12164.

ATORN Shrink-fit chuck, slimline, 3 degrees (DIN 69893-1)

With low interference contour for mould making

HSK 63 | Form A | IK | G 2,5 25000 rpm | ≤0,003 | DIN 69893

Application:
For clamping milling tools and drill bits with h6 shaft tolerance. Suitable for heavy-duty machining and all high-power applications. Suitable for inductive, contact and hot air shrinking devices.

Execution:
- Shrink grip and shrink release of carbide and HSS tools
- Hardness 52 + 2 HRC
- Maximum coolant pressure 80 bar
- 4 additional drill holes for fine balancing
- Glass bead blasted
- **Ident. No. 103–120:** With Balluff chip hole
- **Ident. No. 141–172:** Adjustment travel 10 mm, can be adjusted on both sides

Advantage:
- Slim design, extremely low interference contour
- High transmittable torques
- High positioning and repeat accuracy
- Ideal for high rotation speeds

Delivery:
Ident. No. 103–120: 1x HSK63 shrink-fit chuck 3° (ISO 12164)
Ident. No. 141–172: 1x shrink-fit chuck 3° HSK63 (ISO 12164).

Notes:
The previous standard DIN 69871 was superseded by ISO 12164.

ORION® Quick-change tapping chuck (DIN 69893-1)

shank design with DIN 69871 A steep taper

HSK 63

Application:
For thread cutting and thread shaping on NC machines and machining centres.

Execution:
- The machine spindle's direction of rotation must be changed for reverse motion.

Advantage:
- Fast retooling thanks to quick-change chuck.
- Low tool wear thanks to length compensation.

Delivery:
1x quick-change tapping chuck.

Notes:
For requisite pull studs, see no. 23690. For requisite quick-change inserts, see no. 21560-21566.

Used sizes		1	2
Tool holding device		HSK 63	HSK 63
Suitable for screw thread		M3-M12	M6-M20

ATORN Synchronous tapping chuck DIN 69893-1 HSK (DIN 69893-1)

For machine tools with synchronous control

HSK 63 | Form A | IK | G 2,5 25000 rpm

Application:
For thread cutting on machine tools with synchronous spindles. With rigidly clamped screw taps, pitch errors cause high axial forces that can be compensated for by synchronous tapping chucks through minimal length compensation under pressure and tension.

Execution:
- Pitch errors are compensated for with minimal length compensation of 1.0 mm under tension and 0.2 mm under pressure
- Clamping screws prevent the clamped screw tap from spinning
- Thread-cutting quick-change chuck for synchronous spindles
- Accessories required: Quick-change insert, 1 and 2 pieces no. 21556316-525 collet chucks type ER for thread cutting no. 23320600-691

Advantage:
- Increased tool service life
- Secure clamping in quick-change inserts for ER collets

Delivery:
1x tapping chuck

ORION® Synchronous tapping chuck HSK according to DIN 69893-1 (DIN 69893-1)

For collet chucks type ER according to DIN 6499 ISO 15488

HSK 63 | Form A | G 2,5 25000 rpm

Application:
For thread cutting on machine tools with synchronous spindles. With rigidly clamped screw taps, pitch errors cause high axial forces that can be compensated for by synchronous tapping chucks through minimal length compensation under pressure and tension.

Execution:
- Length compensation under pressure and tension 0.5 mm.

Advantage:
- Compensation of pitch errors under pressure.
- Increased tool service life.

Delivery:
1x synchronous tapping chuck.

ATORN Weldon surface chucks (ISO 7388-1)

SK 40 | SK 50 | Form AD | Form AD/AF | IK | G 2,5 25000 rpm | ISO 7388-1

Application:
For clamping tools with straight shank and clamping surface in accordance with DIN 1835 B.

Execution:
- Alloyed case-hardening steel, core tensile strength at least 950 N/mm²
- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- Max. concentricity < 0.005 mm
- Functional surfaces precision-ground, all other surfaces black-oxide
- With Balluff chip hole

Delivery:
1x SK40 or SK50 surface chuck (Weldon) (ISO 7388-1)

Notes:
The previous standard DIN 69871-1 was superseded by ISO 7388-1.

Technical data:
- Coolant supply: Internal axial

ATORN Surface chuck (Weldon) (ISO 7388-1)

KKB= resealable cooling duct holes

SK 40 | SK 50 | Form AD/AF | G 2,5 25000 rpm | ISO 7388-1

Application:

For clamping tools with straight shank and clamping surface in accordance with DIN 1835 B.

Execution:

- Alloyed case-hardening steel, core tensile strength at least 950 N/mm²
- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- Max. concentricity < 0.005 mm
- Functional surfaces precision-ground, all other surfaces black-oxide
- With Balluff chip hole

Delivery:

1x SK40 or SK50 surface chuck (Weldon) (ISO 7388-1) with coolant bores

Notes:

The previous standard DIN 69871-1 was superseded by ISO 7388-1.

Ident. No. 886

ORION® Surface chuck (Weldon) (ISO 7388-1)

SK 40 | SK 50 | Form AD/AF | G 6,3 15000 rpm | ISO 7388-1

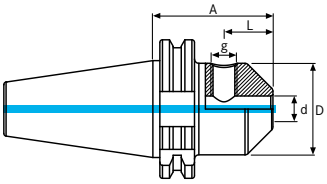
Application:
For clamping tools with straight shanks and clamping surfaces in line with DIN 1835 B.

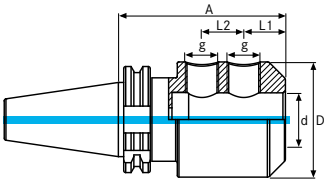
Execution:
- All tapers and tolerances are precision-ground.
- Taper tolerance AT3.
- Strength HRC 57-60.
- Core strength 1,000-1,200 N/mm².
- With Balluff chip hole.

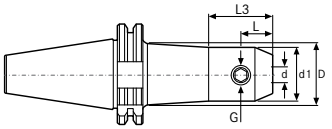
Advantage:
- Prevents the tool from slipping while maintaining high concentricity.

Delivery:
1x surface chuck (Weldon) in accordance with ISO 7388-1 (DIN 69871).

Notes:
Required pull stud no. 23690.







Note outer contour, see Table D, d1 and L3

p. 878

ATORN Combination shell end mill arbours (DIN 6358) (ISO 7388-1)

SK 40 | SK 50 | Form AD | Form A | IK | G 2,5 25000 rpm | ISO 7388-1

Application:
For holding shell end mills and single angle milling cutters with longitudinal groove in accordance with DIN 842.

Execution:
- Alloyed case-hardening steel, core tensile strength at least 950 N/mm²
- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- Max. concentricity < 0.005 mm
- Functional surfaces precision-ground, all other surfaces black-oxide
- With Balluff chip hole
- Required pull studs no. 23690

Delivery:
1x SK40 or SK50 combination shell end mill arbour (ISO 7388-1); incl. retaining screw, key and drive ring

Notes:
The previous standard DIN 69871-1 is superseded by ISO 7388-1. If combined shell end mill arbors with ICS are desired, the cutter retaining screws must be ordered separately with IC DIN 6367.

ATORN Transverse drive shell end mill arbour DIN 6357 (ISO 7388-1)

Increased collar diameter (face mill arbour)

SK 40 | Form AD | IK | G 2,5 25000 rpm | ISO 7388-1

Application:
For accommodating shell end mills and angular milling cutters with longitudinal groove in accordance with DIN 842.

Execution:
- Alloyed case-hardening steel, core tensile strength at least 950 N/mm²
- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- Max. concentricity < 0.005 mm
- Functional surfaces precision-ground, all other surfaces black-oxide
- With Balluff chip hole

Delivery:
1x SK40 or SK50 transverse drive shell end mill arbour (ISO 7388-1); with retaining screw

Notes:
The previous standard DIN 69871-1 was superseded by ISO 7388-1.

ATORN CNC precision short drill chuck (ISO 7388-1)

With spur gear mechanism

SK 40 | Form AD | Form A | IK | R/L | G 6,3 25000 rpm | ISO 7388-1

Application:

Ident. No. 540: For use on machining centres and CNC milling machines with tool change. For drilling, reaming, countersinking and also light milling and smoothing tasks.

Ident. No. 550: For use on machining centres and CNC machines with tool changer.

Execution:

- **Ident. No. 540:** Wear parts hardened and polished
- **Ident. No. 550:**
  - 100 % concentricity check using different test pin diameters at various measuring points, based on DIN ISO 10888
  - Concentricity tolerance ≤ 0.03 mm over the entire clamping range
  - With worm gear
  - Shape A with steep taper, no internal coolant supply

Advantage:

- Remains securely clamped even if the spindle stops suddenly

Delivery:

Ident. No. 540: 1x SK40 precision drill chuck (ISO 7388-1)

Ident. No. 550: 1x SK40 CNC precision drill chuck (ISO 7388-1)

Notes:

The previous standard DIN 69871-1 was replaced by ISO 7388-1.

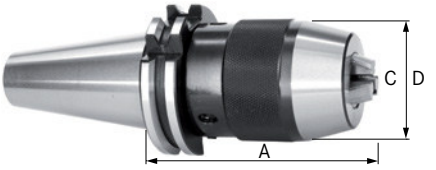
ORION® Short drill chuck (ISO 7388-1)

Self-clamping

SK 40 | SK 50 | Form A | R | G 6,3 12000 rpm | ISO 7388-1



Application:
For drilling and centring.

Execution:
- Precision version.
- Clamping force increases automatically and proportionally to the torque.

Advantage:
- Quick clamping via clamping sleeve, with two clamping surfaces for doubling the clamping force with a wrench.
- In the event that the spindle stops suddenly, loosening of the cutting tool is prevented.

Delivery:
1x short drill chuck in accordance with ISO 7388-1 (DIN 69871) self-clamping; incl. wrench.

Notes:
The previous standard DIN 69871-1 was replaced by ISO 7388-1.

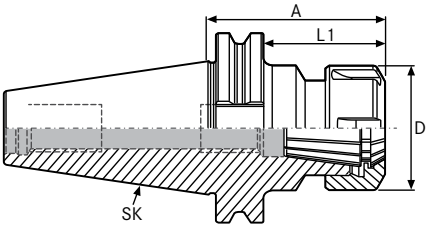
ATORN Collet chuck type ER DIN 6499 (ISO 7388-1)

Clamping nut can be ordered separately, no. 23323 151-297

SK 40 | SK 50 | Form AD | IK | G 2,5 25000 rpm | ISO 7388-1



Application:
For clamping tools with straight shank in ER collet chucks in accordance with DIN 6499.

Execution:
- Alloyed case-hardening steel, core tensile strength at least 950 N/mm²
- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- Max. concentricity < 0.005 mm
- Functional surfaces precision-ground, all other surfaces black-oxide
- With Balluff chip hole
- All ER16 collet chucks feature a hexagon nut
- Required pull studs no. 23690 and collet chucks no. 23320

Delivery:
1x SK40 or SK50 ER collet chuck (ISO 7388-1); incl. clamping nut

Notes:
The previous standard DIN 69871-1 was superseded by ISO 7388-1.

ORION® Collet chuck type ER (ISO 7388-1)

SK 40 | SK 50 | Form AD/AF | IK | G 6,3 15000 rpm | ISO 7388-1

Application:
For clamping tools with straight shanks in ER collet chucks in line with DIN 6499.

Execution:
- With Balluff chip hole
- All tapers and tolerances are precision-ground
- All ER 16 collet chucks have a hexagon nut

Delivery:
1x collet chuck type ER in accordance with ISO 7388-1 (DIN 69871); incl. clamping nut.

Notes:
For ER 16 = normal version, please use our single open-end wrench no. 52002 025

BIG DAISHOWA Hi-Power high-performance power chuck SK-50 (ISO 7388-1)

SK 40 | Form AD | G 6,3 15000 rpm | ISO 7388-1

Application:
The high-performance power chuck combines high precision with high torque transmission and rigidity. Perfect for use in heavy
machining during milling, but also for drilling and fine drilling operations.

Execution:
- High clamping force thanks to special slotted design and needle bearing.
- High rigidity for heavy machining
- High levels of precision and concentricity
- Axial length adjustment of 6 mm with stop screw

Advantage:
- Various applications when used with reduction sleeves ref. no. 23336450-455.
- Perfect for heavy machining.

Delivery:
1x high-performance power chuck in accordance with ISO 7388-1 (DIN 69871).

Notes:
For clamping the BIG DAISHOWA Hi-Power high-performance power chuck,
use hook wrench art. no. 23297010.

ATORN Collet chuck type ER with miniature nut DIN 6499 (ISO 7388-1)

Slimline version

SK 40 | SK 50 | Form AD/AF | IK | G 2,5 25000 rpm | ISO 7388-1

Application:
For clamping tools with a straight shank in ER collets in accordance with DIN 6499.

Execution:
- Alloyed case-hardening steel, core tensile strength at least 950 N/mm²
- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- Max. concentricity < 0.005 mm
- Functional surfaces precision-ground, all other surfaces black-oxide
- With Balluff chip hole

Delivery:
1x SK40 or SK50 ER miniature collet chuck (ISO 7388-1); incl. clamping nut

Notes:
The previous standard DIN 69871-1 was superseded by ISO 7388-1.

ATORN Precision collet chuck (ISO 7388-1)

SK 40 | Form AD | IK | G 2,5 25000 rpm | ≤0,003 | ISO 7388-1

Application:
For clamping tools with straight shanks without loss of concentricity or clamping force up to shank tolerance h10, for economic machining of individual and series parts with extremely high-precision machining results. Ideal for HPC and HSC machining.

Execution:
- 30° trapezoidal thread with polished, extra-long double guide with special anti-friction coating for less friction
- Clamping forces are evenly distributed across the entire cylindrical shell surface and radial forces are optimally absorbed to produce perfect surfaces
- Precise centring when tightening the clamping nut
- Suitable torque wrench attachments 23360 960-966 torque wrench is recommended, suitable collet chucks type ER no. 23323 617-658

Advantage:
- Resistant to fluctuations in temperature and entirely suitable for drying processes and hard milling up to 200 °C
- Reinforcement of the chuck body over the diameter of the clamping nut ensures outstanding stability with an optimum interference contour
- Extremely low system concentricity of < 3 µm with the 2 µm ATORN UP collets. With Fahrion 2 µm HPD sealed collets to 80 bar for internal cooling (without sealing washer)
- Completely enclosed in the chuck cone for optimum stability and even distribution of clamping forces
- Retention force twice that of conventional collet chucks

Delivery:
1x precision collet chuck SK40 (ISO 7388-1); incl. clamping nut

Notes:
The previous standard DIN 69871-1 was replaced by ISO 7388-1.

ATORN HPH high-performance HYDRAULIC expansion chuck (ISO 7388-1)

Short, heavy-duty version

SK 40 | SK 50 | Form AD/AF | IK | G 2,5 25000 rpm | ≤0,003 | ISO 7388-1

Application:
For high-precision and centric clamping of milling, drilling and reaming tools – particularly with milling and heavy-duty machining during rough machining.

Execution:
- With axial longitudinal adjustment
- Reducing sleeves for flexible application
- Very high concentricity (< 3 µm)
- Coolant pressure up to 80 bar
- Temperature-resistant up to 100 °C

Advantage:
- Robust version ideal for HPC+HSC machining
- Damping properties to increase service life of tool and machine spindle
- Vibration-damping effect reduces micro-cracks and improves the workpiece surface
- All standard shanks can be clamped (dia. tolerance h6)
- Very high torque transfer (dia. 20 = 650 Nm/dia. 32 = 890 Nm)

Delivery:
1x SK40 or SK50 hydraulic expansion chuck (ISO 7388-1)

Notes:
The previous standard DIN 69871-1 was replaced by ISO 7388-1.

ATORN HPH hydraulic expansion chuck 3°, ultra-slim (ISO 7388-1)

3D-printed

SK 40 | Form AD/AF | IK | G 2,5 25000 rpm | ≤0,003 | ISO 7388-1

Application:
Produced using an innovative process, the ultra-slim hydro expansion chuck combines the advantages of an expansion chuck and a shrink-fit chuck in a single product.

Execution:
- Extremely high clamping forces
- Extremely high temperature resistance (up to 120 °C) ensures that the chuck retains its accuracy
- Slim shrink-fit chuck-style design makes it suitable for narrow interference contours
- Excellent damping properties
- Max. concentricity < 0.003 mm
- Standard tool changes as with expansion chucks without requiring additional devices
- Reducer bushings enable various applications
- Balanced to G2.5/25,000 rpm
- With Balluff chip hole

Delivery:
1x ultra-slim SK30 or SK40 hydraulic expansion chuck (ISO 7388-1)

Notes:
The previous standard DIN 69871-1 was replaced by ISO 7388-1.

ATORN Shrink-fit chuck, SK40, 4.5 degrees (ISO 7388-1)

DIN 69871 coolant supply AD/B

SK 40 | Form AD/AF | IK | G 2,5 25000 rpm | ≤0,003 | ISO 7388-1

Application:
Ident. No. 003–032: For clamping milling tools and drill bits with straight shank, tolerance h6. Suitable for shrinking on inductive contact and hot air devices.
Ident. No. 103–332: For clamping cutters and drills with straight shanks in h6 tolerance. Suitable for shrinking onto inductive contact and hot air devices.

Execution:
- Guarantees maximum concentricity < 0.003 mm
- Heat-resistant and high-temperature tool steel 1,600-1,800 N/mm²
- Hardness 52 + 2 HRC
- Maximum coolant pressure 80 bar
- Adjustment travel 10 mm, can be adjusted on both sides
- Shrink grip and shrink release of carbide and HSS tools
- 4 additional drill holes for fine balancing
- With Balluff chip hole

Advantage:
- High positioning and repeat accuracy
- Shrink-fit chuck ideal for high rotation speeds
- Slim design, narrow interfering contour
- Very high torque transfer
- Extremely cost-effective

Delivery:
Ident. No. 003–032: 1x SK40 shrink-fit chuck (ISO 7388-1) shape AD/B

Prod. Gr. 287

ATORN Shrink-fit chuck, 4.5 degrees (with KKB) (ISO 7388-1)

With resealable coolant bores (KKB)

SK 40 | Form AD/AF | IK | G 2,5 25000 rpm | ≤0,003 | ISO 7388-1

Application:
For clamping cutters and drills with straight shanks in h6 tolerance. Suitable for shrinking onto inductive contact and hot air devices.

Execution:
- Guarantees maximum concentricity of 0.003 mm
- Shrink grip and shrink release of carbide and HSS tools
- Hardness 52 + 2 HRC
- Maximum coolant pressure 80 bar
- Adjustment travel 10 mm, can be adjusted on both sides
- 4 additional drill holes for fine balancing
- With Balluff chip hole

Advantage:
- High transmittable torques
- Heat-resistant and high-temperature tool steel 1,600-1,800 N/mm²
- High positioning and repeat accuracy
- Ideal for high rotation speeds

Delivery:
1x SK40 shrink-fit chuck (ISO 7388-1)

Notes:
The previous standard DIN 69871-1 was superseded by ISO 7388-1.

ATORN Shrink-fit chuck, slimline, 3 degrees (ISO 7388-1)

For mould making with minimum interference contour

SK 40 | Form AD/AF | IK | G 2,5 25000 rpm | ≤0,003 | ISO 7388-1

Application:
For clamping milling tools and drill bits with h6 shaft tolerance. Suitable for inductive, contact and hot air shrinking devices.

Execution:
- Shrink grip and shrink release of carbide and HSS tools
- Hardness 52 + 2 HRC

- Maximum coolant pressure 80 bar
- 4 additional drill holes for fine balancing
- With Balluff chip hole
- Glass bead blasted

Advantage:
- Slim design, extremely low interference contour
- High transmittable torques

- High positioning and repeat accuracy
- Ideal for high rotation speeds

Delivery:
1x SK40 shrink-fit chuck 3° (ISO 7388-1)

Notes:
The previous standard DIN 69871-1 was superseded by ISO 7388-1.

ORION® Tapping quick-change chuck ISO 7388-1 SK (ISO 7388-1)

With elastic length compensation, effective under pressure and tension

SK 40 | SK 50

Application:
For thread cutting and thread shaping on NC machines and machining centres.

Execution:
- The machine spindle's direction of rotation must be changed for reverse motion.

Advantage:
- Fast retooling thanks to quick-change chuck.
- Low tool wear thanks to length compensation.

Delivery:
1x quick-change tapping chuck.

Notes:
The previous standard DIN 69871-1 was replaced by ISO 7388-1.

ATORN Synchronous tapping chuck ISO 7388-1 SK (ISO 7388-1)

For machine tools with synchronous control

SK 40 | SK 50 | Form AD | IK | G 2,5 25000 rpm

Application:
For thread cutting on machine tools with synchronous spindles. With rigidly clamped screw taps, pitch errors cause high axial forces that can be compensated for by synchronous tapping chucks through minimal length compensation under pressure and tension.

Execution:
- Pitch errors are compensated for with minimal length compensation of 1.0 mm under tension and 0.2 mm under pressure
- Clamping screws prevent the clamped screw tap from spinning
- Thread-cutting quick-change chuck for synchronous spindles
- Accessories required: Quick-change insert, 1 and 2 pieces no. 21556316-525 collet chucks type ER for thread cutting no. 23320600-691

Advantage:
- Increased tool service life
- Secure clamping in quick-change inserts for ER collets

Delivery:
1x tapping chuck

Notes:
(please order quick-change inserts separately).

ORION® Synchronous tapping chuck steep taper according to ISO 7388-1 (ISO 7388-1)

For collet chucks type ER according to DIN 6499 ISO 15488

SK 40 | Form AD/AF | IK | G 2,5 25000 rpm

Application:
For thread cutting on machine tools with synchronous spindles. With rigidly clamped screw taps, pitch errors cause high axial forces that can be compensated for by synchronous tapping chucks through minimal length compensation under pressure and tension.

Execution:
- Length compensation under pressure and tension 0.5 mm.

Advantage:
- Compensation of pitch errors under pressure.
- Increased tool service life.

Delivery:
1x synchronous tapping chuck.

ATORN Surface chuck (Weldon) (ISO 7388-2)

BT 40 | Form JD | IK | G 2,5 25000 rpm | ISO 7388-2

Application:
For clamping tools with straight shank and clamping surface in accordance with DIN 1835 B.

Execution:
- Alloyed case-hardening steel, core tensile strength at least 950 N/mm²
- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- Max. concentricity < 0.005 mm
- Functional surfaces precision-ground, all other surfaces black-oxide
- With Balluff chip hole

Delivery:
1x BT40 surface chuck (Weldon) (ISO 7388-2

Notes:

ATORN Combination shell end mill arbours (DIN 6358) (ISO 7388-2)

BT 40 | Form JD | Form J | IK | G 2,5 25000 rpm | ISO 7388-2

Application:
For holding shell end mills and single angle milling cutters with longitudinal groove in accordance with DIN 842.

Execution:
- Alloyed case-hardening steel, core tensile strength at least 950 N/mm²
- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- Max. concentricity < 0.005 mm
- Functional surfaces precision-ground, all other surfaces black-oxide
- With Balluff chip hole

Delivery:
1x BT40 combination shell end mill arbour (ISO 7388-2); incl. retaining screw, key and drive ring

Notes:
The previous standard JIS B 6339 MAS BT was superseded by ISO 7388-2.

ATORN Transverse drive shell end mill arbour DIN 6357 (ISO 7388-2)

Increased collar diameter (face mill arbour)

BT 40 | Form JD | IK | G 2,5 25000 rpm | ISO 7388-2

Application:
For accommodating shell end mills and angular milling cutters with longitudinal groove in accordance with DIN 842.

Execution:
- Alloyed case-hardening steel, core tensile strength at least 950 N/mm²
- Case-hardened HRc 60 ± 2 (HV 700 ± 50), hardness depth 0.8 mm ± 0.2 mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- Max. concentricity < 0.005 mm
- Functional surfaces precision-ground, all other surfaces black-oxide
- With Balluff chip hole

Delivery:
1x BT40 transverse drive shell end mill arbour (ISO 7388-2); with retaining screw

Notes:
The previous standard JIS B 6339 MAS BT was superseded by ISO 7388-2.

ATORN CNC precision short drill chuck (ISO 7388-2)

BT 40 | Form JD | IK | R/L | G 40 7000 rpm | G 6,3 25000 rpm | ISO 7388-2

Application:

Ident. No. 110: For use on machining centres and CNC milling machines with tool change. For drilling, reaming, countersinking and also light milling and smoothing tasks.

Ident. No. 551: For use on machining centres and CNC machines with tool change systems. For drilling, reaming, countersinking and also light milling and finishing tasks.

Execution:

- **Ident. No. 110:**
  - Integrated worm gear ensures high retaining torque
  - Remains securely clamped even if the spindle stops suddenly
  - Required pull studs no. 23690
- **Ident. No. 551:** Wear parts hardened and polished

Advantage:

- **Ident. No. 110:** Wear parts hardened and polished for a long service life
- **Ident. No. 551:** Remains securely clamped even if the spindle stops suddenly

Delivery:

Ident. No. 110: 1x BT40 NC or short drill chuck (ISO 7388-2)

Ident. No. 551: 1x BT40 precision drill chuck (ISO 7388-2)

Notes:

ATORN HPH high-performance HYDRAULIC expansion chuck (ISO 7388-2)

Short, heavy-duty version

BT 40 | Form JD/JF | IK | G 2,5 25000 rpm | ≤0,003 | ISO 7388-2

Application:

For high-precision and centric clamping of milling, drilling and reaming tools – particularly with milling and heavy-duty machining during rough machining.

Execution:

- With axial longitudinal adjustment
- Reducing sleeves for flexible application
- Very high concentricity (< 3 µm)
- Coolant pressure up to 80 bar
- Heat-resistant up to 100 °C

Advantage:

- Robust version ideal for HPC+HSC machining
- Damping properties to increase service life of tool and machine spindle
- Vibration-damping effect reduces micro-cracks and improves the workpiece surface
- All standard shanks can be clamped (dia. tolerance h6)
- Very high torque transfer (dia. 20 = 650 Nm)

Delivery:

1x short, heavy-duty BT40 hydraulic expansion chuck (ISO 7388-2)

Notes:

The previous standard JIS B 6339 MAS BT was superseded by ISO 7388-2.

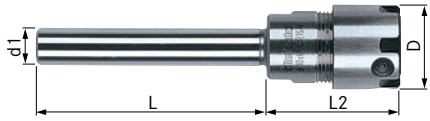
diebold Collet extension with internal cooling

With straight shank, ER-type collet chucks (mini)

IK



p. 874 p. 889

Application:
For clamping tools with straight shank.

Execution:
- With straight shank, type ER Mini.
- Particularly slim version for use in milling chucks as tool extension for deep machining operations where space is restricted.
- Straight shank made of solid material.
- Hollow bored for internal cooling.

Delivery:
1x collet chuck extension.

Notes:

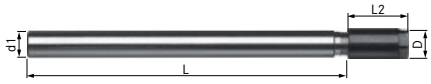
ORION® ERICKSON short drill chuck system

With straight shank

IK

Ident. No. 295, 315–325



p. 892

Application:
For use on NC and CNC machining equipment.

Execution:
- Min. tensile strength at core 800 N/mm.
- Hardened.
- Clamping of drill bits on drill heel possible.
- With adjustable longitudinal stop.
- Collets no. 23326.

Advantage:
- With straight shank - extremely slim version.
- Very good accessibility in confined spaces.

Delivery:
1x ERICKSON short chuck system with cylindrical shank.

ATORN HYDRAULIC expansion extension

Flexible adaptation with straight shaft

IK | G 2,5 25000 rpm | ≤0,006

Application:
Highly flexible extension for HYDRO expansion and collet. For high precision centric clamping of milling, drilling and reaming tools.

Execution:
- Rapid tool replacement and axial length adjustment
- All standard shank diameters (h6) can be clamped
- Central coolant supply (ICS) up to 80 bar

Advantage:
- Outstanding damping properties
- Spacer sleeves provide a wide clamping range
- High torque transfer (dia. 12 = 80 Nm/dia. 20 = 330 Nm)
- Very good accessibility thanks to minimal interference contour
- Spacer sleeves for flexible application

ATORN Synchronous tapping chuck, straight shank similar to DIN 1835 B+E

For machine tools with synchronous control

IK | G 2,5 25000 rpm

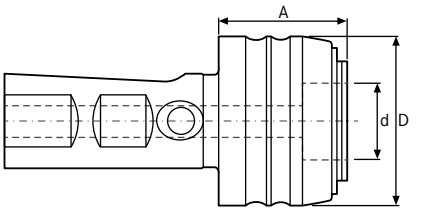
Application:
For thread cutting on machine tools with synchronous spindles. With rigidly clamped screw taps, pitch errors cause high axial forces that can be compensated for by synchronous tapping chucks through minimal length compensation under pressure and tension.

Execution:
- Pitch errors are compensated for with minimal length compensation of 1.0 mm under tension and 0.2 mm under pressure
- Clamping screws prevent the clamped screw tap from spinning

- Thread-cutting quick-change chuck for synchronous spindles
- straight shank similar to DIN 1835 B+E
- Accessories required: Quick-change insert, 1 and 2 pieces no. 21556316-525 collet chucks type ER for thread cutting no. 23320600-691

Advantage:
- Increased tool service life
- Secure clamping in quick-change inserts for ER collets

Delivery:
1x tapping chuck



Straight shank diameter: 25 mm

1-piece quick-change inserts

Accessories for synchronous tapping chuck no. 21555

Application:
The quick-change inserts are intended for quick replacement after breakage, wear or if a different thread size is required. Tap collets are clamped using a collet mount.

Execution:
- 1x quick-change insert
- Treated surfaces

Advantage:
- High concentricity
- Standard collets can be used

Delivery:
1x one-part quick-change insert

Notes:
(Please order collets separately).

Prod. Gr. 225

Extensions for two-piece synchronous quick-change chuck.

Accessories for 21556516-525

Application:
The extensions are used to extend the projection of the synchronous tapping chuck. They are installed as an additional intermediate piece between the chuck and quick-change insert.

Execution:
- Extensions for two-part synchronous quick-change chuck
- Accessories for 21556516-525. The appropriate two-part quick-change insert 21556516 or 21556525 will be required to use extensions 21566616-725.

Advantage:
- High concentricity

Delivery:
1x extension for two-part synchronous quick-change chuck

Notes:
(please order quick-change inserts separately).

Prod. Gr. 206

Chuck wrench with ½" socket

Application:
For tightening and loosening clamping nuts.

Execution:
- For NC lathes.
- For controlled tightening of clamping nuts using a torque wrench.
- Drive: 1/2" square with ball-securing groove.
- Hardened and galvanised special steel.

Advantage:
- Spindle damage can be avoided by controlled tightening when changing tools in the machine.

Delivery:
1x collet wrench with square drive torque wrench for clamping nuts (ER) in accordance with DIN 6499.

Notes:
The setting value of the torque wrench is dependent on gauge size "S". The operating instructions for your torque wrench contain the necessary information and calculation formulas. For suitable torque wrenches: see no. 52246300.

Prod. Gr. 532

FAHRION® Torque wrench attachment

Accessories for no. 23360, 23361 and 23760 and 23761

Application:
For clamping all CENTRO P and ATORN precision collets with standard nuts in accordance with DIN 6499/ISO 15488 (ER/ESX).

Execution:
- For torque wrench attachment ref. no. 961-966, see torque wrench no. 52241 200.

Advantage:
- For fast and simple clamping without risk of injury.
- Conventional clamping nuts can also be used for clamping.

Delivery:
1x torque wrench attachment for FAHRION Centro|P collet chuck.

AMF Wrench

For shell end mill arbours

Application:
For tightening and loosening cutter retaining screws.

Execution:
- Heat-treated and welded to at least 1,200 N/mm.
- For tightening cutter retaining screws in accordance with DIN 6367.
- Hardened special steel with burnished finish.

Delivery:
1x wrench for cutter retaining screws.

Notes:
The size specification corresponds to the diameter of the shell end mill arbors.

Prod. Gr. 263

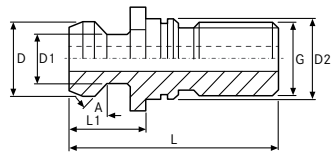
For Mazak4001 CAT metric SK40 with recess, hole dia. 6 mm hole for internal cooling, with O-ring



ATORN Pull stud Haas Micron

IK

Application:
For screwing into tool holders. They differ depending on the machine and spindle type and are used to fix the holders in the machine spindle.

Execution:
- All pull studs made from material 16Mn Cr5
- Case-hardened HRc 58 ± 2
- Thread and bore hole soft, black oxide and polished
- Pull studs with O-ring = sealed

Delivery:
1x Haas-Mikron pull stud

Notes:
Further versions available on request (specification of machine types required).

ATORN Collet chucks, type ER sealed, according to DIN 6499 A/ISO 15488

<Can be used up to 120 bar, concentricity 5 µm

Application:
For use on precision collet chucks.

Execution:
- Metallic-sealed up to 120 bar for internal coolant supply

Advantage:
- Higher concentricity extends tool service life

Delivery:
1x HP (high-precision) collet, metallic seal; concentricity 5 µm

Notes:
It is not possible to combine the ATORN precision collet chuck and the Fahrion CENTRO|P precision collet chuck with the metal-sealed ATORN collets. All standard ER type collet chucks fit on the metal-sealed collets.

FAHRION® Precision collet chuck sets type GERC HP DIN 6499/ISO 15488-B (ISO 15488)

< 2 µm concentricity

Application:
For HSC machining with high-precision machining results.

Execution:
- With small concentricity and repeat tolerance 2 µm (for system tolerance 3 µm and with 3 x dia. maximum = 50 mm), clamp bridge h10.
- For ATORN precision collet chucks and Fahrion CentroP precision collet chucks.
- With FAHRION|Protect corrosion protection for longer service life.
- Surface super-finished for enhanced retention force.

Advantage:
- Greater concentricity extends tool service life.
- Collets do not need to be replaced as often or can be used longer for specific applications.

Delivery:
1x type ER precision collet chuck set.

< 2 µm concentricity

FAHRION® Precision collet chuck type GERC HPD DIN 6499/ISO 15488-B (ISO 15488)

Seal for internal coolant supply as well as < 2 µm concentricity

IK

Application:
For HSC machining with high-precision machining results.

Execution:
- HPD with seal for internal coolant supply (can be used up to 60 bar).
- With small concentricity and repeat tolerance 2 µm (for system tolerance 3 µm and for 3 x dia. maximum = 50 mm).
- Surface super-finished for enhanced retention force.
- Only the nominal dimension can be clamped (straight shank with h8).
- With FAHRION|Protect corrosion protection for longer service life.

Advantage:
- Greater concentricity extends tool service life.
- Collets do not need to be replaced as often or can be used longer for specific applications.

Delivery:
1x type ER precision collet chuck.

HPD sealed collet chuck, 2 µm concentricity for IC

FAHRION® Precision collet chuck sets type GERC HPD DIN 6499/ISO 15488-B (ISO 15488)

Seal for internal coolant supply as well as < 2 µm concentricity

IK

Application:
For HSC machining with high precision machining results

Execution:
- HPD with seal for internal coolant supply (can be used up to 60 bar).
- With small concentricity and repeat tolerance 2 µm (for system tolerance 3 µm and with 3 x dia. maximum = 50 mm), clamp bridge h10.
- Surface super-finished for enhanced retention force.
- Only the nominal dimension can be clamped (straight shank with h8).
- With FAHRION|Protect corrosion protection for longer service life.

Advantage:
- Greater concentricity extends tool service life.
- Collets do not need to be replaced as often or can be used longer for specific applications.

Delivery:
1x type ER precision collet chuck set.

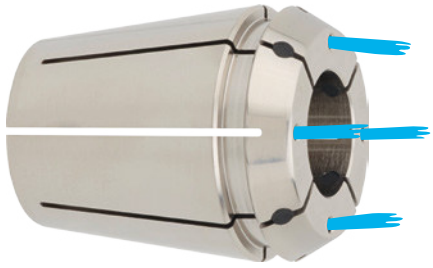
FAHRION® GERC-GBDD tap collets, DIN ISO 15488-A, with square socket

Seal for IC (internal cooling) and spray nozzle

IK



Application:
For thread cutting with Centro P precision collet chucks or with synchronous tapping chuck.

Execution:
- With square drive for positive engagement of the screw tap.

- For internal cooling (can be used up to 120 bar).
- Concentricity < 10 µm.
- Concentricity less than 10 µm.

Delivery:
1x type ER screw tap collet chuck set.

ORION® Tap collet type ER DIN 6499 A with square socket

Application:
For clamping screw tapping tools.

Execution:
- Suitable for all standard ER collet chucks.
- For machines with synchronous feed.

Advantage:
- Square drive to prevent screw taps from slipping.

Delivery:
1x type ER screw tap collet chuck set.

Notes:

ORION® Collet chucks for ERICKSON system

For ERICKSON system

Application:
For clamping tools with straight shank.

Execution:
- For short chuck system ERICKSON sealing taper/ sealing taper shank no. 23325.
- Multi-range collets for clamping the nominal diameter.
- Concentricity 20 µm.
- Clamp bridge -0.5 mm.

Delivery:
1x type ERICKSON collet.

ATORN Reducing sleeve with KKB

With coolant bore along the location hole

Application:
For reducing the clamping diameter. For drilling, reaming, milling and sharpening tools.

Execution:
- Slotted and polished
- Concentricity tolerance ≤ 3 µm
- Concentricity tolerance ≤ 3µm

Delivery:
1x reducing sleeve with coolant bores

Notes:
Caution: Never clamp without a tool - the reducing sleeve will be damaged.

Reducing sleeves
Sealed for internal cooling

IK

Application:
For reducing the clamping diameter.

Execution:
- With adjustable longitudinal stop.
- Sealed for internal coolant supply, for reducing the clamping diameter.
- Concentricity tolerance with collets is 0.003 mm.
- Suitable for all expansion chucks no. 23333, 23335 and 23350.

Advantage:
- For clamping various shank diameters with one single chuck.

Delivery:
1x reducing sleeve.

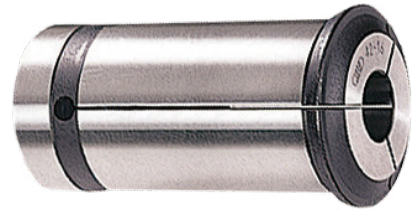
Reducing sleeve for power chuck
Concentricity ≤0.005 mm not sealed

Application:
For reducing the clamping diameter.

Delivery:
1x reducing sleeve.

Notes:
On the HSK-63, the length adjustment screw does not work because of the coolant pipe, and lack of space. It will only work with the SK-40 version. Options: Stop screw only available as an option - not supplied with the BIG bushing. Accessory art. no. 23336460 stop screw.



Ident. No. 450

Tapered spindle cleaner
for MK spindles

Application:
For cleaning tool holders on machine spindles, tapered sleeves or tapered gauges.

Version:
- MK taper shank.
- Wooden basic body.
- Fabric cleaning pads.

Advantage:
- Removes contamination, ensuring accurate positioning on the mounting taper.
- Ensures enhanced concentricity.

Scope of delivery:
1x tapered spindle cleaner for MK holders.

Type	Suitable for tool holding device	Length (mm)	Ø (mm)	23500... Ident. No.

ORION® Tapered spindle cleaner
for ER holders

Application:
For cleaning tool holders. For cleaning the inner taper of ER holders.

Version:
- Taper for ER tool holders.
- Wooden basic body.
- Fabric cleaning pads.

Advantage:
- Removes contamination, ensuring accurate positioning of the collet on the mounting taper.
- Ensures enhanced concentricity.

Scope of delivery:
1x tapered spindle cleaner for ER holders.

Type	Suitable for tool holding device	Length (mm)	Ø (mm)	23510... Ident. No.

ORION® Tapered spindle cleaner
for HSK spindles

Application:
For cleaning the inner taper of machine spindles.

Version:
- Hollow shank taper (HSK) for taper and contact surface.
- Wooden basic body.
- Fabric cleaning pads.

Advantage:
- Removes contamination, ensuring accurate positioning of the tool holder in the spindle.
- Ensures enhanced concentricity.

Scope of delivery:
1x tapered spindle cleaner for HSK spindles.

ATORN Chip booster (cleaning propeller)

Rapid cleaning of pallets and workpieces

Application:

The chip booster can be mounted in the tool holder and can be used to remove chips and coolant from components, devices and pallets very quickly.

Execution:

- Cooling through the centre
- Max. 12,000 rpm, balanced according to G2.5 12,000 rpm
- Manufactured from high-strength, anodised aluminium
- Automatic supply from the tool magazine
- Mount in any conventional tool holder with dia. 20 mm
- 7 turbine blades

Advantage:

- Safe and fast method for removing chips and coolant
- Robust and durable
- Quieter working environment
- Automated cleaning of the machine tool working area
- Reduction in non-productive time = cost savings

Delivery:

1x chip booster; cleaning propeller

Prod. Gr. 280

AMF Gripper without counterbalance unit, pneumatic

For workpiece handling in the machine tool.

Application:

The gripper performs fully automatic workpiece replacement during the machining process on a machine tool. The change is performed from the machine tool of the milling machine and facilitates workpiece handling between the parts storage and clamping device.

It is actuated by compressed air that is routed through the machine spindle. The gripper closes pneumatically and is opened using spring force.

Execution:

- Max. permissible rotation speed: 20 [rpm].
- Suitable for Weldon mounting and hydraulic expansion chucks.
- Designed for ambient temperatures between 0°C and 60°C.
- Transport of workpieces up to max. 8 kg.
- Available in two versions for workpiece sizes up to max. 50 mm or max. 70 mm.

Advantage:

- The gripping force can easily be adjusted via a pressure regulating valve and thus adapted to the respective requirements of the workpiece.
- Easily exchangeable gripper inserts for handling different workpiece geometries.
- Easy implementation of unmanned shifts and therefore higher machine utilisation and greater flexibility.
- Considerably reduced setup times for small to medium-sized batches.

Delivery:

1x pneumatic gripper with counterbalance unit.

Prod. Gr. 2AW

Gripper with counterbalance unit, pneumatic

For workpiece handling in the machine tool.

Application:

The gripper performs fully automatic workpiece replacement during the machining process on a machine tool. The change is performed from the machine tool of the milling machine and facilitates workpiece handling between the parts storage and clamping device.

It is actuated by compressed air that is routed through the machine spindle. The gripper closes pneumatically and is opened using spring force. The integrated, spring-loaded CX counterbalance function protects the tool, machine spindle and workpiece and compensates for different tolerances and unevenness.

Execution:

- Max. permissible rotation speed: 20 [rpm].
- Suitable for Weldon mounting and hydraulic expansion chucks.
- Designed for ambient temperatures between 0°C and 60°C.
- Transport of workpieces up to max. 8 kg.
- The scope of delivery includes three replacement seals
- Available in two versions for workpiece sizes up to max. 50 mm or max. 70 mm.

Advantage:

- The counterbalance function (Z: 5 mm, C: +/- 3°) optimally protects all components and balances out tolerances and unevenness.
- The gripping force can easily be adjusted via a pressure regulating valve and thus adapted to the respective requirements of the workpiece.
- Easily exchangeable gripper inserts for handling different workpiece geometries.
- Easy implementation of unmanned shifts, ensuring greater machine utilisation and
- increased flexibility.
- Considerably reduced setup times for small to medium-sized batches.

Delivery:

1x pneumatic gripper with counterbalance unit.

Gripper with counterbalance unit, hydraulic

For workpiece handling in the machine tool.

Application:

The gripper performs fully automatic workpiece replacement during the machining process on a machine tool. The change is performed from the machine tool of the milling machine and facilitates workpiece handling between the parts storage and clamping device.

It is actuated by coolant, which is routed through the machine spindle. The gripper closes hydraulically and opened using spring force.

The integrated spring-loaded CX counterbalance function protects the tool, machine spindle and workpiece and compensates for different tolerances and unevenness.

Execution:

- Max. permissible rotation speed: 20 [rpm].
- Suitable for Weldon mounting and hydraulic expansion chucks.
- Designed for ambient temperatures between 0°C and 60°C.
- Transport of workpieces up to max. 8 kg.
- Available in two versions for workpiece sizes up to max. 50 mm or max. 70 mm.

Advantage:

- The counterbalance function (Z: 5 mm, C: +/- 3°) optimally protects all components and compensates for different tolerances and unevenness.
- The gripping force can easily be adjusted using inductors and adapted to the respective requirements of the workpiece in this way.
- Easily exchangeable gripper inserts for handling different workpiece geometries.
- Easy implementation of unmanned shifts, ensuring greater machine utilisation and
- increased flexibility.
- Considerably reduced setup times for small to medium-sized batches.

Delivery:

1x hydraulic gripper with counterbalance unit.

Notes:

Depending on the machine used and the operating pressure of the coolant,
three pre-configured grippers are available. During use, please observe the minimum and
maximum operating pressures.

Gripper inserts for gripper - prism

Application:
For quick and secure parts handling in the machine tool with the AMF gripper. They are mounted on the gripper carrier and are mechanically secured.

Execution:
- Hardened steel with a wear-resistant surface.
- First side with horizontal and vertical prism, second side ribbed.
- Gripper with 80 mm gripper extension (L5): A=0-40 mm and dia. D=12.5-39 mm gripper with 100 mm gripper extension (L5): A=0-59 mm and dia. D = 12.5-56 mm.

Delivery:
1x gripper insert for gripper - prism.

Notes:
The gripper inserts are suitable for all AMF grippers. They can be
adapted to the respective workpiece size by moving them on the gripper carrier.

ORION® Quick-change inserts

Without safety coupling

Application:

No. 21565: For quickly changing screw taps without having to use a wrench.

No. 21566: For quickly changing screw taps without having to use a wrench. Quick-change inserts with safety friction clutch are used to prevent tool breakage caused by overload.

Execution:

- **No. 21565:** Precision quick-change insert.
- **No. 21566:**
  - Precise quick-change insert with adjustable and almost wear-free ball safety coupling for protection against damage when tool becomes blunt or comes into contact with bottom of the hole.
  - Inserts with safety friction clutch come with preset torque values for machining steel up to 800 N/mm².
  - For blind holes.

Advantage:

- Increased tool service life.

Delivery:

No. 21565: 1x quick-change insert without safety clutch.

No. 21566: 1x quick-change insert with safety clutch.

Notes:

No. 21565: Please enquire about any shank diameters, thread sizes, or brands not listed. The DIN no. or shank dimensions (diameter and square) must be indicated on the order form in addition to the thread size.

No. 21566: Shaft diameters or thread sizes and brands not listed available upon request. The DIN no. or shank dimensions (diameter and square) must be indicated on the order form in addition to the thread size.

Tapping chuck, type DSPL

With morse taper according to DIN 228

Application:
For cutting internal threads on reversible drills, lathes and milling machines. Can be used horizontally and vertically.

Execution:
- With Morse taper shank and flat tangs in accordance with DIN 228 B.
- With patented double chuck (clamps shank and square drive).
- Elastic length compensation under compression and tension
- Axial-parallel pendulum device and flexible length compensation for cutting exact gradients and flush threads.
- With clockwise and anti-clockwise rotation.

Advantage:
- Adjustable safety friction clutch prevents tool breakage.

Delivery:
1x DSPL tapping chuck.

Notes:
Left-hand thread available on request.

Thread cutting machine

Vertical and horizontal thread cutting

Application:
For the creation of threads and for other machining operations. Easy to use with a variety of possible adjustments

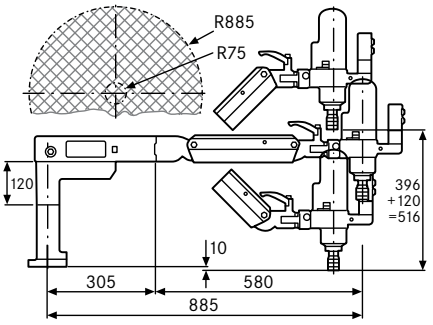
Execution:
- Electrically powered motor with 220 V
- For vertical and horizontal thread cutting
- Manual speed control by means of a potentiometer
- Operation with standard quick-change inserts
- Thread cutting performance: Steel M2-M14
- Thread cutting performance: Aluminium M2-M16
- Automatic tool lubrication and pneumatic version available on request
- Workspace height 565 mm
- Workspace radius 75 mm to 885 mm
- workspace radius 75mm to 885mm
- Recommended accessory ref. no. 21616002, fastening clip for fixation on the table. Quick change inserts, size 1/D=dia.19 mm, ref. no. 21566130 21566160 with safety coupling

Advantage:
- Value for money

Delivery:
1x thread cutting machine with basic tool insert, articulated arm for vertical thread cutting and swivel adapter for horizontal thread cutting

Notes:
(please order quick-change inserts separately).

Ident. No. 001



Ident. No. 002
Required accessories: fastening clip for fixing to the table.

ORION® Morse taper reducing sleeves (DIN 2185)

Application:
For mounting tools with Morse taper shanks.

Execution:
- Internal and external taper in accordance with DIN 2185.
- Fully hardened.
- Internal and external taper ground with accurate pitch.

Advantage:
- No clamping imprints.
- Maximum concentricity.

Delivery:
1x MK 1/0 reducing sleeve.

ORION® Morse taper extension sleeves (DIN 228-1)

Long version

Application:
For extending drill bits and reamers.

Execution:
- Internal and external taper in accordance with DIN 2185.
- Ground external taper.

Advantage:
- Maximum concentricity.

Delivery:
1x MK extension sleeve.

RÖHM Drill chuck with tapered mount

For clockwise and anti-clockwise rotation, with toothed ring and key

R/L

Application:
No. 21290: For holding tools with straight shank.
No. 21291: For holding tools with straight shank in pillar and bench drills.

Execution:
- **No. 21290:**
  - Hardened body head with keyholes and jaws.
  - Keyed drill chuck, DIN ISO 10887.
- **No. 21291:**
  - Body head with keyholes and jaws, hardened
  - Industrial version
  - Toothed ring drill chuck with key, DIN ISO 10887

Advantage:
- **No. 21290:**
  - High clamping force thanks to toothed ring.
  - Very strong and resistant to wear.
- **No. 21291:**
  - For day-to-day industrial applications
  - High clamping force thanks to toothed ring

Delivery:
No. 21290: 1x 0.5-6.5 mm/B 12 drill chuck.

RÖHM Extra RV drill chucks with retaining ring

With radial locking, keyless, for clockwise and anti-clockwise rotation

R/L

Application:
For holding cordless screwdrivers, cordless drills and mains drills; suitable for percussion drilling with multiple edges for assembling and dismantling.

Execution:
- Plastic clamping sleeve.
- With keyless radial locking mechanism.
- Ref. no. 21308015 metal clamping sleeve.

Advantage:
- No additional locking required when screwing and drilling, in particular when impact drilling.
- Highly ergonomic and user-friendly, with start-up protection.
- The plastic parts are marked according to material to facilitate recycling.

Delivery:
1x 1.0-10 mm/3/8 in x 24 drill chuck.

RÖHM Supra S drill chuck

Keyless clamping

R

Application:
For clamping and releasing drill bits quickly without a key.

Execution:
- Automatic retightening during drilling proportionate to the cutting force.
- **No. 21300:** Heavy-duty industrial version with internal taper chuck in accordance with DIN 238.
- **No. 21301:**
  - Industrial version for hand-guided machines.
  - With internal taper chuck in accordance with DIN 238.
- **No. 21301–21302:** All parts are interchangeable.
- **No. 21302:**
  - Lightweight version for hand-guided machines.
  - Mount with UNF-3 B internal thread.

Advantage:
- No tools required for operation, allowing for fast retooling.
- For day-to-day industrial use.
- **No. 21301–21302:** Very strong and resistant to wear.

Delivery:

Supra SK drill chuck with threaded mount

Impact drill resistant

R/L

Application:
Keyless quick clamping chuck for all makes of hammer drill.

Execution:
- Industrial version for hand-guided machines.
- Automatic retightening during drilling proportionate to the cutting force.
- Chuck sealed to protect against drilling dust and contamination.
- Sturdy design thanks to metal functional components.
- Easy and quick insertion of the drill bit by hand.

Advantage:
- Sealed to protect against dirt.
- Secure clamping thanks to clamping force securing mechanism.

Delivery:
Ident. No. 010–030: 1x 0.5-10 mm/B 12 drill chuck.
Ident. No. 110–130: 1x 0.5-10 mm/3/8 in x 24 drill chuck.

ALBRECHT Drill chuck
Präzisions Spannfutter
Self-clamping for clockwise rotation

R

Application:
For clamping and releasing drill bits quickly without a key.

Execution:
- For extended periods of use with maximum concentricity.
- All wear parts are case-hardened, ground and replaceable.
- **Ident. No. 131, 164:**
  - With internal cone in accordance with DIN 238.
  - With clamping force safety device to prevent accidental opening of the drill chuck in the event of the working spindle stopping abruptly.

Advantage:
- 100 % concentricity check using different test pin diameters at various measuring points, based on DIN ISO 10888.

Delivery:
Ident. No. 015–130, 160–163: 1x drill chuck.

ALBRECHT SBF-plus drill chuck

Self-clamping

R

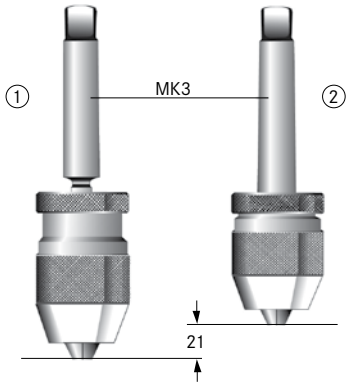
Ident. No. 020, 040–240

Application:
For clamping and releasing drill bits quickly without a key.

Execution:
- SBF-plus drill chuck, shortened version.
- Precision version.
- Ref. no. 21314160 features a straight shank dia. 16 x 60 mm.
- Ref. no. 21314160 with diamond-coated clamping jaws for hardened tool shanks.

Advantage:
- Drill chuck and drive arbour form one unit, which means that optimal stability and a minimum concentricity tolerance can be achieved.
- Particularly advantageous on machines with a small working area thanks to it being 21 mm shorter than the two-part version.

Delivery:
1x SBF-plus drill chuck.



Dimensions comparison
① SBF and morse taper arbor (two-piece)
② SBF-plus (one-piece)

ATORN CNC precision chuck, DIN 228-B

With internal cooling, lateral coolant connection

IK R/L

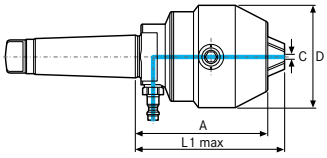
Application:
For use on conventional lathes and CNC machines for drilling, reaming, countersinking.

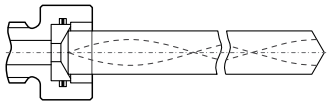
Execution:
- Integrated spur gear ensures high retaining torque
- Glass bead blasted
- Drill chuck with sealing washer (dia. 5 mm) integrated in the drill chuck head, for cooling channel drill dia. 8-16 mm with smooth shank in accordance with DIN 6535, moulded sealing washer (dia. 2 mm) included in the scope of delivery, for cooling channel equipped drill bit dia. 2.5-8 mm with smooth shank in accordance with DIN 6535, shape HA
- With internal cooling by means of lateral coolant connection

Advantage:
- Wear parts hardened and polished for a long service life
- Remains securely clamped even if the spindle stops suddenly

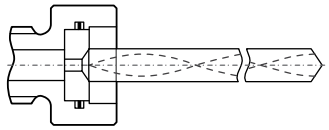
Delivery:
1x CNC precision drill chuck; incl. accessories

Notes:
This precision drill chuck is designed for use on lathes in fixed tailstocks (non-rotating drill chuck).





(1) Sealing washer ATORN 16 (dia. 4.2 mm) integrated in the drill chuck head, for cooling channel drills dia. 6-16 mm with smooth shaft in accordance with DIN 6535, shape HA.



(2) Sealing washer ATORN 16 (dia. 2.05 mm) included, for cooling channel drills dia. 3-6 mm with smooth shaft in accordance with DIN 6535, shape HA.

ORION® Morse taper arbours (DIN 238)

With morse taper for drill chucks

Application:
For holding drill chucks.

Execution:
- Hardened and ground.
- Drill chuck holders with steep taper.

Delivery:
1x morse taper arbour, without ejector drift.

Ident. No. 101–162, 164–224

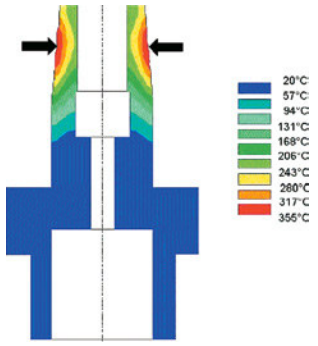
Thermal tool clamping



Shrink technology is used to refer to the following characteristics:

- New optional pyrometer technology monitors the temperature to prevent burning up
- tools can be changed in a matter of seconds by induction or electrical heating with high energy density
- DIEBOLD shrink-fit chucks are made from heat-resistant special steel; as the result of the special hardening and tempering process, they have a particularly long service life and high dimensional stability
- The shrink process is reversible and can be repeated as often as necessary. Even after more than 5000 shrink operations, DIEBOLD shrink-fit chucks retain concentricity, clamping force and elasticity
- HSS and solid carbide shafts can be shrunk in DIEBOLD chucks
- Shrinking process of max. 10 seconds when using inductive shrinking systems
- Only the tool nose is warmed up. As a result of this local heat application, slowly heating the chuck body, the cooling time is < 30 s

MS 3.0 micro shrink unit

Application:

The MS 3.0 shrinks sensitive, thin-walled shrink-fit chucks up to dia. 16 mm softly and gently, i.e. with exactly the right energy input to prevent the chuck from overheating.

Very small cutters are often used that have a cutting diameter of only 0.04 mm to 0.01 mm. These cutters are very sensitive and must not come into contact with solid objects such as cooling bells, as this would destroy them.

They usually have shank diameters of 3 mm, 4 mm or a maximum of 6 mm. This showcases another strength of Diebold products. Shrink-fit chucks with a 3 mm hole are not easy to manufacture in a way that ensures that they can be shrunk reliably.

Diebold is known for the exceptionally high quality of its products, with the best-selling items from its extensive overall range being shrink-fit chucks with a diameter of 3 mm.

Execution:

- The MS 3.0 has been specifically developed for slim, thin-walled and extremely short shrink-fit chucks.
- However, standard chucks up to dia. 16 mm and TER11-TER20 collets can also be shrunk using the MS 3.0.
- The regulated generator output gently heats the chucks.
- Even when processing chucks with a very small mass, the system shuts down reliably and safely before overheating.
- For carbide shanks only. Dia. 3-16 mm for chucks with standard geometry. Dia. 3-16 mm for chucks with slim geometry.
- max. shrink length: approx. 328 mm.

Advantage:

- Touch display: Easy-to-use menu navigation with a modern touchscreen design.

Delivery:

1x DIEBOLD MS 3.0 micro shrink unit with parameter configuration, dia. 3-20 mm. Includes 4x ferrite discs for shrinking of dia. 3-16 mm and protective gloves.

Notes:

For effective and gentle cooling of the tools, we recommend using the FKS 04 S water cooler.

diebold Air cooler for shrink unit

Application:
The air cooler is placed next to the shrinking unit. After heating the shrink-fit chuck, the tool is placed in the centring disc of the air cooler.
The valve is then opened. Thanks to the intelligent airflow, shrink-fit chucks are cooled quickly and effectively.

Execution:
- After 1-3 minutes, depending on the chuck contour, the outer contour is cooled down.

Delivery:
1x DIEBOLD AirChiller air cooler for MS 502 and US 1100 shrinking units

Notes:
Tool chucks/adapters must be ordered separately.

Prod. Gr. 226

diebold Universal shrink unit US 1100 horizontal

with parameter configuration, safe and effective overheating protection

Application:
The US 1100 horizontal shrinking unit can be used to shrink shrink-fit chucks of dia. 3-32 mm (carbide) and dia. 6-32 mm (HSS). The optional pyrometer coil also enables the temperature of the shrink-fit chuck to be controlled automatically and directly during the heating process. This prevents the shrink-fit chuck from burning up. The safe and fast shrinking process does not require any prior identification of the shrink-fit chuck. Automated shrinkage using parameters or manual shrinkage at the touch of just one button is integrated in the standard unit with basic coil.

Execution:
- The shrink-fit chucks are clamped securely in tool holders that can be changed flexibly to suit the application (HSK25 to HSK100 and SK/BT30 to SK/BT50) and the coil is moved over the tool holder.
- A universal tool clamp is also available for centrally clamping all tool taper types.
- Worn or broken cutting tools can be ejected using an integrated removal device.
- Precise length adjustment possible via an additional retrofit device.
- Shrink length: approx. 500 mm.

Advantage:
- USB connection.
- Optionally equipped with touch display or one-touch surface.

Delivery:
1x DIEBOLD US 1100 horizontal basic coil with 5x ferrite discs, 1x pair of protective gloves + Display Basic.

Notes:
We recommend the FKS 04 S water cooler for cooling the tools.

diebold Universal shrink unit US 1100 vertical

with parameter configuration, safe and effective overheating protection

Application:
The vertical units in the US 1100 series can be used to shrink shrink-fit chucks of dia. 3-32 mm (carbide) and dia. 6-32 (HSS) using fixed parameters.
The optional pyrometer coil also enables the temperature of the shrink-fit chuck to be controlled automatically and directly during the heating process.
This prevents the shrink-fit chuck from burning up. The safe and fast shrinking process does not require any prior identification of the shrink-fit chuck.

Execution:
- HSK 63/80/100 can be inserted directly into the centring disc. Adapters for tool holders are available for the other interfaces (SK 25, SK/CAT/BT 30 to 40 and HSK 25 to 50).
- Shrinking with Pyrometer and TempControl.
- Manual shrinking using one button or automated shrinking based on parameters.
- Precise length adjustment possible via an additional retrofit device.
- max. shrink length: approx. 500 mm.

Delivery:
1x DIEBOLD US 1100 vertical, basic coil, base plate, with 5x ferrite discs, 1x pair of protective gloves, 1x centring disc and Display Basic.

Notes:
For effective and gentle cooling of the tools, we recommend using the FKS 04 S water cooler.

diebold TubeChiller US 1100 vertical cooling unit

Accessories for Diebold vertical shrink unit, art. no. 23400234

Application:

With our newly developed TubeChiller, you can automatically cool down the tool holder. This significantly increases the level of occupational safety since there is no handling of hot tools.

Tool distortion can be completely ruled out by uniform flooding of the tool holder. Your chuck can be used directly after the cooling process thanks to the integrated blow-off function.

Combined with our patented pyrometer technology in the coil, this dramatically increases process safety and occupational safety.

Execution:

- Optional pyrometer coil with TempControl® for monitoring the temperature of the shrink-fit chuck.
- Foot-operated switch for “hands-free” operation.
- i4.0 functions of the devices.
- Integrated USB and RS 242 data interfaces for network integration.
- Preparation for data transfer for statistical evaluations and documentation.
- After the shrinking process, cooling is performed automatically in the TubeChiller.
- Directly after the cooling process with automatic blow-off function using compressed air.

Advantage:

- Automatic shrinking and subsequent cooling of the tool holder.
- The use of the TubeChiller does not require any additional space for a cooling system.
- Compact and ergonomic workplace.

Delivery:

1x DIEBOLD TubeChiller (base frame) for US 1100 vertical cooling unit

Notes:

The TubeChiller can only be ordered in combination with the vertical shrinking unit, art. no. 23400234. Subsequent additions on site will not be possible.

ATORN Basic unit for tool assembly

4x 90° swivelling

Application:
The tool mounting block is intended as a base unit for fastening to a workbench or tool trolley. Adapters can be attached to allow all kinds of tool holders to be mounted or removed.

Execution:
- Modular tool holders made of steel
- Aluminium housing
- The unique technology ensures that the tool holder is not clamped at the high-precision cone, which is instead exposed. This not only protects your tool holder, but also ensures the precise machining of parts being produced.

Advantage:
- Easy and quick replacement of the adapters
- High degree of flexibility
- Mechanical interlock fastening of adapters
- No cone damage
- Practical swivel function for ergonomic and healthy working

Delivery:
1x tool-mounting block; without adapter

Notes:
Adapters must be ordered separately from the Accessories range.

ATORN Interchangeable adapter (ISO 7388-1)

for DIN ISO 7388-1 (DIN 69871), DIN ISO 7388-2 (DIN JIS-B), DIN 2080

Application:
The adapter is inserted into the tool mounting block and serves as an interface for the corresponding tool holder. The tool holders can then be fixed accordingly and tools mounted or removed.

Execution:
- Modular tool holders made of steel
- Use the adapter to rotate your tool at any time and reach the ideal working position in seconds
- Hand wheel for clamping and releasing

Advantage:
- No damage to the cone as the drive arbour does not rest against the holder
- Mount cone remains free

Delivery:
1x adapter for tool-mounting block

Notes:
For DIN ISO 7388-1 (DIN 69871), DIN ISO 7388-2 (DIN JIS-B), DIN 2080.

ATORN Interchangeable adapter (DIN 69893-1)

for DIN 69893 shape A (HSK-A)

Application:
The adapter is inserted into the tool mounting block and serves as an interface for the corresponding tool holder. The tool holders can then be fixed accordingly and tools mounted or removed.

Execution:
- Modular tool holders made of steel
- Use the adapter to rotate your tool at any time and reach the ideal working position in seconds
- Hand wheel for clamping and releasing

Advantage:
- No damage to the cone as the drive arbour does not rest against the holder
- Mount cone remains free

Delivery:
1x adapter for tool-mounting block

Notes:
For DIN 69893 shape A (HSK-A).

ATORN Interchangeable adapter (DIN 69880-1)

For DIN 69880 (VDI)

Application:
The adapter is inserted into the tool mounting block and serves as an interface for the corresponding tool holder. The tool holders can then be fixed accordingly and tools mounted or removed.

Execution:
- Modular tool holders made of steel
- Use the adapter to rotate your tool at any time and reach the ideal working position in seconds
- Hand wheel for clamping and releasing

Advantage:
- No damage to the cone as the drive arbour does not rest against the holder
- Mount cone remains free

Delivery:
1x adapter for tool mounting block

Notes:
For DIN 69880 (VDI).

ORION® 2D mechanical edge finder

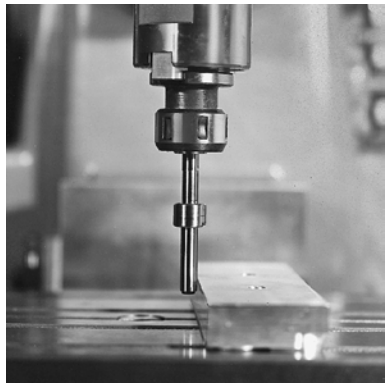
For milling and coordinates drill

Application:
The edge finder is used to accurately determine the edges of workpieces and bore centre points in relation to the working spindle during milling, for example.

Execution:
- For use with speeds from 400 - 600 rpm
- Repeatability of approx. 0.01 mm
- Hard chrome-plated probe head

Notes:
Spare part: Edge finder spring, ref. no. 23921501 in a pack of 10

Ident. No. 030



Sensor design		Single 2-D probe	Offset 2-D probe
Clamp in shank Ø (mm)		10	10
Probe head Ø (mm)		10	4/10

Prod. Gr. 227

ORION® 2D edge finder

With illuminated display and spring-loaded probe ball

Application:
For precise alignment of workpiece reference surfaces or edges to determine the bore centre points aligned centrally to the working spindle.

Execution:
- Functional components are hardened and ground.
- **Ident. No. 011:** With acoustic signal. (already in title addition?)

Delivery:
1x edge finder.

ORION® 3D edge finder

With illuminated display and spring-loaded probe ball

Application:
For precise alignment of workpiece reference surfaces or edges to determine the bore centre points aligned centrally to the working spindle.

Execution:
- Functional components are hardened and ground.
- **Ident. No. 025:** With acoustic signal. (already in title addition?)

Advantage:
- 3D version also suitable for approaching the workpiece in the Z direction (vertically).

Delivery:
1x edge finder.

ATORN 3D edge finder

With dial gauge

SK 40

Application:
Suitable for defining and setting the workpiece reference points on all 3 axes (X, Y and Z) on all milling machines and machining centres. The workpiece is measured in any direction with the measuring probe until both indicators are at '0'.

Execution:
- Direct path measurement along the Z axis, can be used vertically and horizontally, concentricity can be readjusted using four screws
- Predetermined breaking point on the measuring probe prevents damage to the workpiece or dial gauge
- IP 67 degree of protection: suitable for temporary immersion in water and dustproof in accordance with DIN EN 60529
- For the ATORN 3D edge finder 23924010-020, spare part ATORN bellows for ref. no. 23924 009

Advantage:
- Easy-to-read metal housing
- Can be used with all tool and eroding machines
- Easy reading of the actual value

Delivery:
1x 3D edge finder; incl. probe insert

Ident. No. 010

Prod. Gr. 234

3D Digital 3D edge finder
with shank

HIGHLIGHT

Application:
Revolutionary! The new 3D digital probe combines the best of both worlds because the results can be displayed either as analogue or digital values. The digital display with figures enable you to read values easily and digitally. However, as it is difficult for your eyes to reliably follow a rapidly changing digital display, the additional analogue display of the 3D digital probe gives you assurance when reading off values because a moving pointer can be kept track of more efficiently and reliably. What's more, an integrated LED shows you the probing process status using different colours and helps you to prevent overrunning and the resulting defect. With the 3D digital probe you determine workpiece zero points and length dimensions in all axis directions (X/Y/Z) quickly and easily and align your workpiece or vice parallel to the machine axis.

Execution:
- Revolutionary: Digital and analogue on one display!
- Analogue display rough scale
- Analogue display precision scale 0.01 mm from -0.250
- Digital display resolution 0.005 mm

Advantage:
- 3D digital probe switched on by random movement of the probe insert in X, Y, or Z direction. If not used, the probe will switch off after two minutes.
- The 3D digital probe is of course small and slim, waterproof (IP67) and is delivered with serial number and test certificate.

Delivery:
1x Tschorn 3D probe 3D Digital + probe insert

Notes:
Probe status LED: Off = rough scale; green = precision scale; red = warning area

23924...	Ident. No.	030 ●

Prod. Gr. 227

SLIMplus V2 3D edge finder
with shank

HIGHLIGHT

Application:
Slim. Robust. Watertight. With Tschorn 3D edge finders, you can determine workpiece zero points and length dimensions quickly and easily or align your workpiece or vice parallel to the machine axis.

Execution:
- How to work with the 3D edge finder: Clamp the edge finder in your tool holder. Set the concentricity as described in the operating instructions. Approach your workpiece with the edge finder. As soon as the pointer displays "0", the spindle axis is precisely at the edge of the workpiece.
- One of the advantages of the SLIMplus V2 3D edge finder is its repeat accuracy of +/- 0.01 mm. This accuracy guarantees consistent and reliable measurements in any application. No matter whether you are recording workpiece contours or zero points, the SLIMplus V2 3D edge finder sets new standards in precision.
- The SLIMplus V2 3D edge finder is watertight according to IP67. You can rely on the 3D edge finder to deliver reliable measurement results even in dusty or damp working environments.

Advantage:
- Repeat accuracy +/- 0.01 mm
- IP67 watertight
- can be used with our proven ceramic probe inserts
- with serial number and test certificate

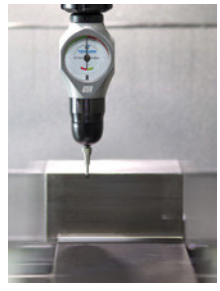
Delivery:
1x 3D edge finder with serial number incl. ceramic probe insert dia. 3 mm, operating key, with factory certificate

23924...	Ident. No.	031 ●

Prod. Gr. 227

SAVEplus analogue 3D edge finder
with shank

HIGHLIGHT



Application:
The SAVEplus 3D edge finder is characterised by its slim design - however, it is the cost-effective variant among our 3D edge finder models

Execution:
- slim design
- For the SAVEplus, we simply insert a complete dial gauge directly into the edge finder and save the time-consuming integration directly into the housing of the edge finder

Advantage:
- Repeat accuracy +/- 0.01 mm
- can be used with our proven ceramic probe inserts
- Adjustable scale

Delivery:
1x SAVEplus 3D edge finder incl. ceramic probe insert dia. 3 mm

Notes:
When changing the probe insert, take care not to damage the seal and check the concentricity after every probe change. Please refer to the operating instructions for a precise description.

23924...	Ident. No.	032 ●

Prod. Gr. 227

DREHplus V2 3D edge finder
with shank

HIGHLIGHT

Application:
No other measuring equipment gives you the opportunity to measure your tool to the turning centre simply, precisely and directly in your lathe. Our unique probing technology, which we have developed especially for use in your lathe, makes this possible. It is not possible to measure pointed lathe tools precisely on a ball. That's why the DREHplus 3D edge finder has a patented, conical probe body. This is used to probe directly to the centre of the spindle in both the X axis and the Y axis, which eliminates additional calculations, as X=0 and Y=0.

Execution:
- Y=0 corresponds to the turning centre. As a result, you ensure the best possible processing, achieve a longer service life and obtain optimal surfaces.
- Without any additional calculations, measure your tools to the centre of the spindle or X=0.
- You can also measure all tools in the Z axis, taking into account the length offset in your machine.

Advantage:
- Innovative probing technology
- The advantage for your lathe!
- Tool measurement in all axes including the turning centre (Y)

Delivery:
1x DREHplus 3D edge finder incl. probe insert, operating key, with factory certificate

23924...	Ident. No.	033 ●

Prod. Gr. 227

Ceramic probe inserts
The spare parts can be used universally for all our 3D edge finder models.

HIGHLIGHT

Application:
Probe insert is inserted into common Tschorn 3D edge finder models.

Execution:
- Ceramic ball on the tip
- Thread on the shank for screwing on

Delivery:
1x ceramic probe insert

Notes:
When changing the probe insert, take care not to damage the seal and check the concentricity after every probe change. Please refer to the operating instructions for a precise description.

Ø (mm)		3	6
Length (mm)		27	63
23924...	Ident. No.	034 ●	035 ●

Prod. Gr. 227

Probe insert dia. 56 mm
for edge finders from the SLIMplus series

HIGHLIGHT

Application:
Probe insert is inserted into common Tschorn 3D edge finder models.

Execution:
- As its diameter is larger than the housing of the 3D edge finder, this special probe insert enables probing to an almost infinite depth and opens up new possibilities. By using slim tool holders for clamping the 3D edge finder (the diameter of which is smaller than dia. 50 mm), you can extend the depth almost as much as you want. Determine the workpiece position and measure the parallelism - at almost infinite depths.

Advantage:
- extremely deep probing
- and parallelism measurement

Delivery:
1x probe insert dia. 56 mm

Ø (mm)		56
Length (mm)		62
23924...	Ident. No.	036 ○

Prod. Gr. 227

DREHplus probe insert
for Tschorn V2 models

Application:
Probe insert is inserted into common Tschorn 3D edge finder models.

Advantage:
- Probe inserts are easy to screw in and out due to practical bores

Delivery:
1x probe insert for DREHplus

Notes:
The spare parts can be used universally for all our 3D edge finder models.

HIGHLIGHT

Ø (mm)		3.6
Length (mm)		34

ORION® Zero adjustment device with dial gauge

Application:
The device is placed on the workpiece. Using the machine spindle, the cutting tool is moved up to the probe until the indicator is at zero for the first time. Now the reference dimension for the distance from the workpiece of 100 mm has been reached.

Execution:
- Height adjustment gauge to determine position of workpiece surface in the Z direction on milling machines and lathes, can also be used horizontally
- Non-magnetic.

Delivery:
1x zero setter.

Scale value (mm)		0.01
Reference dimension (mm)		100
Repeat accuracy (+/-) (mm)		0.01
23931...	Ident. No.	010 ●

Prod. Gr. 227

Zero adjustment device, mechanical
With dial gauge

Application:
For accurately determining the position of workpiece surfaces or workpiece lengths in the Z direction on lathes or milling machines. The device is placed on the workpiece. It is then moved carefully towards the device with the spindle stationary until the dial gauge shows '0'. The reference dimension of 50 mm is now reached. Allowance has been made for a safety spring travel of approx. 0.5 mm for going beyond the 50 mm.

Execution:
- Zero point probe for improved guidance, for even more precise determination of the position of the workpiece surface in the Z direction on milling machines and lathes.
- Steel.
- With dial gauge.
- **Ident. No. 020:** No. 23932 020, magnetic: in order to also be able to mount the zero adjustment device on the side, a version with a built-in magnet is available for delivery.

Delivery:
1x zero setter in a wooden case with serial number and test certificate.

Ident. No. 010

Zero adjustment device mechanical Micro

For measuring micro-tools

Application:
for accurately determining the position of workpiece surfaces or workpiece lengths in the Z direction on lathes or milling machines. the device is placed on the workpiece.

Execution:
- For measuring micro-tools, possible up to dia. 0.1 mm.
- Thanks to the safety spring travel, the zero setter is unaffected by an overrun of a maximum of 2 mm.
- Ref. no. 23932031: To enable mounting of the zero adjuster on the side, a version with built-in magnets is available.

Delivery:
1x zero setter in a wooden case with serial number and test certificate.

No. 23961 240-243

ATORN tool presetters save time and money, putting you an extra step ahead of the competition. Your tools are set and measured while your machine is producing metal chips - so there's no downtime.

Preparing tools correctly pays off

Precisely measured tools, optimised machine operating times and a longer service life for tools increase the output of your production facility by at least 15 percent. ATORN tool presetters pay for themselves quickly, are easy to operate, gentle on your budget and great when it comes to performance.

Simple!

- The ATORN concept: Efficient day-to-day operation starts with the user
- The latest image processing technology makes tool presetting child's play
- Fast familiarisation thanks to the intuitive ATORN operating concept

Precise!

- Image processing system with dynamic crosshair for contact-free, precise tool measurement, independent of the operator
- High-quality branded components including Bosch pneumatic systems, THK guides and Heidenhain glass scales ensure precision and a long, maintenance-free service life
- SK 50 tool holding spindle with high repeatability and integrated calibration edges

Economical!

- Three-in-one: Tool measurement, setting and testing
- Presetters include under-table, storage shelf for adapters and equipment and accessories and label printer
- "Made in Germany" quality at an unbeatable price
- Worldwide service

Conclusion	Uneconomical, high risk of tool damage	Low purchasing cost, but unsuitable for measuring and setting tools	High purchasing costs as each machine requires a separate laser	Outdated technology, a setting device with image processing is required for new purchases	Higher profitability thanks to reliable manufacturing quality, longer machine operating times, optimised service life and less waste

✔ Standard ■ Optional – Not available

ATORN tool presetters in detail

Simple and fast:
Time-consuming fine tuning is a thing of the past. The dynamic crosshair moves to the tool cutting edge and automatically measures within the entire camera image.

Reliably accurate results:
With projector technology, the measurement results are dependent on the operator. Different from EZset! The results are accurate, reproducible and reliable, regardless of the user.

Effective and economical:
Three-in-one! Rapid tool measurement, setting and testing - right next to your CNC machines.

① Device tower with three guides in three measuring range variants
② One-handed operating handle
③ Centre-turning measuring device (optional)
④ Membrane keypad (360° brake, 4 x 90° indexing, vacuum [optional])
⑤ Under-table
⑥ Image processing with CCD camera and integrated incident light power LEDs
⑦ Tool chuck spindle SK 50
⑧ ImageController image processing in four variants
⑨ Label printer
⑩ Utensil storage
⑪ Basic body with two guides in three measuring range variants

EZclick: ImageControllerbasic

Operate the ICbasic image processor using the EZclick rotary/push button. Use EZclick to activate the menus on the 7 inch monitor and select and confirm functions at the touch of a button. Graphic symbols help you when using the tool presetter.

EZpush: ImageController1

The IC1 image processor is easy to operate using the EZpush 13.3 inch touchscreen monitor. You can quickly and conveniently select and confirm all the functions of the tool presetter via a graphic menu.

EZtouch: ImageController2

The IC2 image processor features an EZtouch 13.3-inch touchscreen monitor for convenient and intuitive operation. Clear graphics on the function buttons enable standard measuring processes to be performed quickly and easily.

EZslide: ImageController3

The IC2 image processor features an EZtouch 24-inch touchscreen monitor for convenient and intuitive operation. Clear graphics on the function buttons enable standard measuring processes to be performed quickly and easily.

Note:

Further information on our ATORN presetters can be found in our online shop under Clamping Technology.
There is also a brochure available to download for each device type.
HAHN+KOLB Werkzeuge GmbH offers first-class expert advice for tailored on-site consultation.
This can take place on site or at our technology centre in Ludwigsburg, Germany.

ATORN Thermal label printer

Accessories for ATORN tool presetter

Application:
Labels are used in the thermal label printer on the tool presetter. All acquired data are printed on a label and can be affixed to the tool for later transfer to the machine.

Delivery:
1x thermal label printer

23961...	Ident. No.	228 ○

Prod. Gr. 2AD

ATORN "BLUE-TACK" cleaning agent

Application:
The cleaning compound is used to eliminate chips that adhere to the tool cutting edges due to magnetic charge.

Delivery:
1x cleaning compound package

23961...	Ident. No.	161 ○

Prod. Gr. 2AD

EASY-TAG Data holder, vertical and horizontal

Space-saving mounting

Application:
For labelling tools.

Execution:
- Data holder, ideally suited to ATORN and Zoller tool presetting devices.
- Data holder dimensions 92 x 38 mm.
- The data holders can be affixed both horizontally and vertically.
- This allows tool carriers to be stored in a tool cabinet in a space-saving and visually clean way.
- Universal holder for (VDI) with two powerful magnets.
- Assignment of tools using colour coding possible.
- Tool data holder made of plastic.

Advantage:
- Minimisation of the setup time.
- Avoiding errors for pre-existing tool compilations.
- No additional measurements necessary.

Delivery:
1x data holder.

Notes:
Other dimensions on request.

ORION Data clip holder

Magnetic basic holder for ORION data clips

NEW

Application:
The basic holders are used to fasten data clips and can be easily attached to all magnetic surfaces. It is also possible to attach them to a screw head.

Execution:
- quick installation using neodymium magnets
- plastic injection moulding

Advantage:
- Overview of the tool magazine
- tidy storage of the clips on the machine for reuse
- always know which tool is located in which magazine slot

Delivery:
1x packaging unit of magnetic basic holders = 10 pieces

ORION® Small data clip
for thermal labels

Application:
The data clips are available in different colours and sizes, depending on the customer's preference

Execution:
- plastic injection moulding
- for attaching directly to the tool holders or to the data clip holder
- different colours to choose from

Advantage:
- provides a clear overview of the tool cabinet and setup trolley as well as the tool magazine
- provides a tidy solution
- Minimises setup times

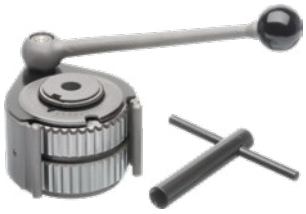
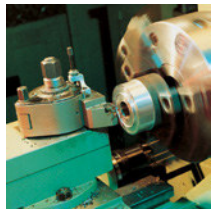
MULTIFIX quick-change steel tool holder

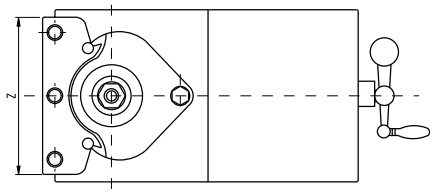
Application:
For holding change tool holders. The selection of the Multifix quick-change steel tool holder and change tool holder depends on the drive output, the tool carriage width and lathe chisel height.

Execution:
- The drill hole in the centring disc must be enlarged to the dimensions of the clamping screw.

Advantage:
- Precision manufacture owing to the high repeat accuracy (0.01 mm)
- Versatile production possibilities (40 tool positions possible)
- Quick and trouble-free height adjustment thanks to adjusting screw
- Extremely flexible due to the modular structure







Tool holder width z ≥ tool skid width l

tool holders for lathes

can be used on almost all lathes with tool chucks in line with DIN ISO 10889-1. Manufactured from quality steel (tensile strength 1000 N/mm²) and protected against corrosion by burnishing. all wear surfaces are hardened and sanded. Coolant supply is via adjustable jets or coolant tube. The lathe chisels are securely, precisely and gently clamped by a spring-loaded pressure plate.

ATORN Precision short drill chuck with worm gear mechanism (DIN 69880-1)

For NC lathes

IK DIN 69880

Application:
For clamping tools with straight shank.

Execution:
- For NC lathes
- The tool is clamped using a hexagon key
- Hexagon T-handle wrench operation
- With worm gear

Advantage:
- High concentricity
- Operates without play and with vibration damping
- It is possible to change the tool directly in the machine

ORION® Quick-change tapping chuck (DIN 69880-1)

DIN 69880

Application:
For thread cutting and thread shaping on NC machines.

Execution:
- For holding quick-change inserts, see no. 21566

- Elastic length compensation under compression and tension
- For quick-change inserts with adjustable safety coupling
- For reverse motion, the direction of rotation of the machine spindle needs to be changed.

Bar grips (DIN 69880-1)

For CNC lathes

Application:
For automatic retightening of material on CNC lathe.

Execution:
- For CNC lathes
- Replacement for bar loader

Advantage:
- For reliably pulling out workpiece length

Delivery:
With standard grabber attachments and cemented carbide plates.

Notes:
Special accessories for extending grabber diameter to 18-36 on request.

RIHETEC Kühlmitteldüsen — SmartKD coolant nozzle, flexible composite material

Application:
The innovative coolant nozzle SmartKD saves a great deal of time when setting up a lathe. Complicated adjustments to stubborn copper pipes are a thing of the past in Fig.3. Thanks to the replaceable coolant pipe, you always have a suitable coolant nozzle. The SmartKD can be mounted in a flash. Simply insert the coolant nozzle into the coolant hole and screw it tight. Then align the tube with the tool blade.

Execution:
- Stainless steel ball Ø 14, 15 and 16
- internal pipe diameter 4 mm
- pipe length 50 mm, 70 mm or 100 mm, extremely flexible
- pressure 6 - 10 bar (dependent on length)

Advantage:
- Simple installation
- optimum cooling of tool cutting edge
- precise and strong coolant stream
- suitable for many CNC machines

Notes:
Accessories ref. no. 21665212 sealing plug quantity 5 pieces

Smart KD in insert

RIHETEC Kühlmitteldüsen — MiniKD coolant nozzle, flexible composite material

Application:
The MiniKD was specially developed for use in compact VDI holders, but also fits many other tool holders with external cooling. As in the case of the SmartKD, mounting is extremely simple. Simply insert in the coolant bore, tighten, and align. The MiniKD with an M5 or M6 thread is then simply screwed in and aligned.

Execution:
- Stainless steel ball Ø 10 mm, 11 mm or 12 mm or
- connecting thread M5 or M6 thread
- Internal pipe diameter 4 mm
- Pipe length 50 mm or 70 mm
- special length 100 mm upon request (max. 6 bar)
- max. pressure 10 bar

Advantage:
- Simple installation
- optimum cooling of tool cutting edge
- precise and strong coolant stream
- suitable for many CNC machines
- reasonable price

Notes:
The MiniKD is also installed in the DriveKD and is very versatile in its uses.

RIHETEC Kühlmitteldüsen — DriveKD coolant nozzle for rotary tools

Double nipple, galvanised steel

Application:
Conventional coolant nozzles, often spray in all directions and do not provide a direct coolant jet. This often results in inadequate cooling at the tool cutting edge. The DriveKD performs its task superbly well.

Execution:
- threaded connectors M8x1, M10x1 and 1/8 thread
- internal pipe diameter 4 mm
- pipe length 50 mm or 70 mm
- max. pressure 10 bar (50 mm, 70 mm)
- special length of 100 mm available upon request (max. pressure up to 6 bar)

Advantage:
- quick, easy installation
- Precise and strong coolant stream onto the tool cutting edge, for a long service life.
- precisely adjust the coolant stream using the flexible pipe
- reasonable price
- Broad range of uses

RIHETEC Kühlmitteldüsen — EdgeKD coolant nozzle for rotary tools

Easy to swivel and lock

Application:
For use in tool holders where an angled outlet is required for assembly. EdgeKD does away with the laborious assembly of inflexible coolant pipes. This makes it easy to swivel and lock the EdgeKD into place. Suitable for EWS, Heimatec and many other manufacturers.

Execution:
- threaded connectors M10x1 and 1/8" thread
- internal pipe diameter 4 mm
- pipe length 100 mm, replaceable
- max. pressure 6 bar

Advantage:
- quick, easy installation
- flexible coolant tube (SmartPipe)
- precise and strong coolant stream
- attractive price
- Broad range of uses

Delivery:
Consists of one smart tube, union screw, ring piece, hollow screw and two aluminium seals

Ident. No. 282

Prod. Gr. 278

RIHETEC Kühlmitteldüsen — JetKD-A coolant nozzle

Application:
The JetKD is suitable for installation in both fixed and driven tool holders. Machines with high-pressure pumps require special coolant nozzles to suit the higher pressures. This is where the JetKD-A comes in!

Execution:
- screw-in thread M8x1, M10x1 or 1/8 BSP thread
- nozzle aperture 4 mm
- nozzle lengths 12 mm and 20 mm
- suitable for high pressures

Advantage:
- Simple installation
- nozzle can be locked in any position
- high level of stability
- minimal space requirements
- large adjustment range, can be swivelled up to 45° in every direction

RIHETEC Kühlmitteldüsen — EasyKD coolant nozzle

Made from 100 % stainless steel, very robust

Application:
EasyKD fits in all tool holders with a 12 mm location hole. In all situations where a flexible pipe is not required and a high level of stability is required.

Execution:
- ball diameter 12 mm
- nozzle aperture 4 mm
- nozzle length 10 mm, 15 mm and 20 mm
- high-pressure-proof

Advantage:
- Simple installation
- available in 3 lengths
- large swivel range
- minimal space requirements

Notes:
packing unit 10 pieces

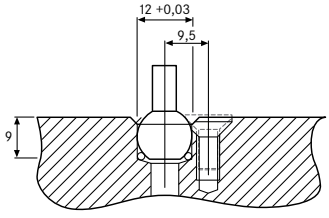
Prod. Gr. 278



Mounted in the 12 mm location hole on the tool holder. The ball is clamped with an M5 countersunk head screw to keep the coolant stream in position.

RIHETEC Kühlmitteldüsen

RingKD coolant nozzle

Very robust and virtually wear-free

Application:
The RingKD transports the drilling emulsion/cutting oil into a straight adjustable nozzle via a ring. It is suitable for many tool holders with an appropriate threaded connection. The RingKD is ideal for use in narrow spaces and where precise adjustment of the stream is required.

Execution:
- nozzle aperture 4 mm
- stainless steel nozzle
- threaded connection, brass body
- high-pressure-proof
- self-sealing tapered thread

Advantage:
- Simple installation
- Broad range of uses
- swivel range >180°
- minimal space requirements
- extremely precise coolant stream

ARE YOU A MACHINING MASTER?
WE HAVE WHAT IT TAKES.
Do you need more than just a hammer, pair of pliers or a screwdriver?
We have the full range for you. Machining tools, handling systems and
measuring technology. However, we also offer tailor-made system solutions,
large and small machinery and complete factory equipment.
In total, more than 120,000 products.

ORION® Fixed centring points (DIN 806)

Full tip

Application:
For centring and supporting long and narrow workpieces on lathes and grinding machines.

Execution:
- Tip angle 60°.
- Made of tool steel.
- Fully hardened and ground.

Delivery:
1x centring point MK 1.

Notes:
Centring points in special design on request.

BRUCKNER® Fixed centring points (DIN 806)

Full 60° tip and safety core

Application:
For centring and supporting long and narrow workpieces on lathes and grinding machines.

Execution:
- Tip angle 60°.
- Made from solid carbide.
- Concentricity tolerance on cemented carbide ≤ 0.8 µm.
- Post grinding groove marks end of use of centring point.
- With safety core.

Advantage:
- Wear-resistant carbide tip.
- The safety core prevents the cemented carbide from slipping off with the clamped workpiece, the consequence of which would be major damage.

Delivery:
1x centring point MK 2.

BRUCKNER Fixed centring points (DIN 806)

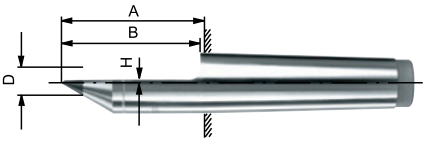
Half, extremely flattened tip

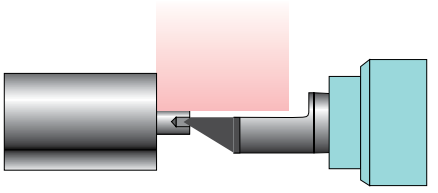
Application:
For centring and supporting long and narrow workpieces on lathes and grinding machines.

Execution:
- Tip angle 60°.
- Taper hardened and precision-ground.
- Carbide-tipped.
- Concentricity tolerance ≤ 0.8 µm.
- For flat grinding.

Delivery:
1x centring point MK 4.



No. 22114



Carbide centring tip, extremely flattened and extended for smaller diameters and with short shoulder or surface grinding.

BRUCKNER® Fixed centring points (DIN 807)

With full tip and thread for draw-off nuts

Application:
For centring workpieces on lathes, grinding machines and radial drilling machines.

Execution:
- Tip angle 60°.
- With thread for draw-off nut.
- Taper fully hardened and precision-ground.
- Carbide-tipped.
- Concentricity tolerance ≤ 0.8 µm.

Delivery:
1x centring point MK 2.

Notes:
Supplied without draw-off nut.

ORION® Revolving centring tips

With extended moving point

Execution:
- Tip angle 60°.
- Moving point is hardened and can be reground multiple times.

Advantage:
- Precision roller bearings ensure a high level of concentricity.
- Special seal prevents the ingress of dirt and coolant.
- Maintenance-free owing to permanent lubrication.

Delivery:
1x revolving centring point.

Revolving centring points
With shock absorber

Application:
For fine turning, rough machining and copying on lathes.

Execution:
- Tip angle 60°.
- Bearings supported on a spring pack for impact absorption.
- Body and moving point are hardened and ground.
- Moving point can be reground multiple times.
- For absorbing impact loads and compensating for linear expansion.

Advantage:
- Special seal prevents the ingress of dirt and coolant.
- Precision roller bearings ensure a high level of concentricity.
- Maintenance-free owing to permanent lubrication.

Delivery:
1x revolving centring point.

BRUCKNER® Revolving high-performance tips

With reinforced bearings

Application:
For use in conjunction with conventional turning, CNC turning, rough machining and smoothing.

Execution:
- 60° moving point.
- For all turning operations (roughing, finishing and fine turning).
- Precision and rough machining of medium-sized components.
- Hardened and precision-ground.

Advantage:
- Long service life.
- Concentricity guaranteed with test report.
- Maintenance-free owing to permanent lubrication.
- Reinforced and hard-wearing precision bearings to absorb radial and axial forces.

Delivery:
1x revolving high-performance tips.

Notes:
Bokö system high-performance live points on request. For grinding and testing with a concentricity tolerance of 0.003 mm on request.

ROHM Slim revolving centring point

Centring point with small housing diameter

Application:
For mounting and supporting long and projecting lathe parts with centre drill hole to avoid imbalance and to encourage stabilisation.

Execution:
- Tip angle 60°.
- Precision and rough machining of universal components.
- Hardened and ground.
- Moving point can be replaced.

Advantage:
- Particularly favourable where conditions on the lathe are confined.
- Precision roller bearings ensure a high level of concentricity.

Delivery:
1x revolving centring point.

CoA face driver set

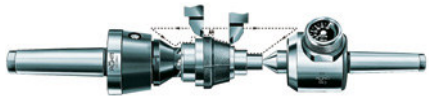
Diameter of clamping circle 12-50 mm, turning range 13-100 mm

Application:
For stripping workpieces across the whole length without reclamping.

Execution:
- Tip angle 60°.
- Max. workpiece weight 100 kg.
- Centring point diameters of 6 mm and 12 mm.

Advantage:
- Fast retooling to different workpiece diameters by changing the driving discs.
- The centring point can be easily reground.
- The driving disc adapts to unevenness of up to 5° angled workpiece faces thanks to the hydraulic pressure compensation of the 3 support pistons.
- The preloaded and axially adjustable Belleville washer pack compensates for varying centre depths.

Delivery:
1x RÖHM CoA face driver MK 3 for clockwise rotation.



Appropriate centring points on request

Centring point, individual

Accessories for CoA face driver

Application:
For compensating for different workpiece centres.

Execution:
- Tip angle 60°.

Advantage:
- Suitable for all basic body sizes.

Delivery:
1x centring point.

Notes:
Centring points with head on request.

Reversible jaws DB, one piece

For 3-jaw lathe chuck

Application:
For clamping workpieces on jaw chucks.

Execution:
- stepped on the inside
- hardened

Delivery:
All sets feature 3 pieces.

Notes:
Grinding down in chuck necessary to achieve precise concentricity.

For chuck Ø		80 mm	100 mm	160 mm	200 mm	250 mm	315 mm

Block jaws, one-piece, unstepped, BL

For 3-jaw lathe chuck

Application:
For clamping workpieces on jaw chucks.

Execution:
- For screwing onto plain jaws.
- Material 16MnCr 5
- soft
- can be hardened

Advantage:
- subsequent machining possible as well as adaptation of shape to workpieces
- High precision by unscrewing the jaws in the chuck

Delivery:
All sets feature 3 pieces.

Notes:
Grinding down in chuck necessary to achieve precise concentricity.
Jaw width: Dimensions not included in diagram.

Prod. Gr. 203

ORION® Scroll chuck

Application:
Suitable for individual or series parts for small workpieces with thin walls as well as for use as a workpiece holder on drilling and grinding machine tables.

Execution:
- Steel body
- Jaws are case-hardened and reversible
- Ref. no. 010/020 with 3 jaws, ref. no. 040 with 6 jaws.
- Chuck with soft jaws
- Chuck with collet holder or Morse taper shank
- Centric clamping
- See table:
- Clamping range min./max.= internal clamping
- Clamping range 2 min./max. = external clamping

Delivery:
Chuck JF ultra-flat, incl. a set of reversible, case-hardened interchangeable jaw grips type D

Notes:
Chucks available as 3-jaw or 6-jaw design, also corrosion-protected. Chucks with aluminium body available; quote on request.

ORION® Workpiece stop

Application:
For clamping short parts on lathe chucks.

Execution:
- Fastened with 3 magnets that are built into the limit stop by simply placing on the lathe chuck body.
- Stop is coloured blue
- Contact surfaces are polished
- Material: aluminium

Notes:
Workpiece stop is suitable for 3-jaw chucks with jaw width up to 25 mm, but can be easily milled so that it also fits larger jaws up to 55 mm, for workpiece diameter 15-130 mm

ORION® Clamping heads SK65 round version

Application:
For versatile applications, machining centres, all common axial force clamping systems on lathes and vices, measuring machines and pallet clamping.

Execution:
- high-strength rubber/metal connection
- high retention forces
- Corrosion protection coating

Notes:
Version with transverse grooves and for multi-spindle lathes available on request. Sizes SK32, SK52 and SK80 round are available in the Hahn & Kolb online shop. All sizes from SK32 to SK80 are available in square and hexagon versions on request.

ATORN Permanent-magnet clamping plates

with particularly narrow transverse pole pitch

Application:
For high-precision grinding and eroding work.

Execution:
- Double neodymium magnetic system generates an adhesive force of up to 100 N/cm²
- Universal clamping of extremely small and thin or large workpieces
- Very robust structure with solid basic body and solid pole plate
- No deformation during switching operation due to special switching method
- Sealed against coolant and dielectric
- Easy switching using hex key

Delivery:
1x permanent magnet clamping plate; with 2 stop rails, 2 adjustable clamps and hex key, operating instructions

Notes:
Other sizes available on request.

SAV NEOMILL permanent-magnet clamping plates

Application:
Suitable for heavy and rough machining. The dense, maximum
concentrated magnetic field allows applications for small,
medium and large workpieces, even with rough or uneven
surfaces.

Execution:
- With narrow transverse pole pitch.
- High-adhesion neodymium magnet system.
- The pole pitch allows universal clamping, even for workpieces with rough or uneven contact surfaces.
- Maximum stability due to single-piece housing and solid pole plate.
- ON/OFF switch via hand lever.
- In the OFF position, a weak opposing field facilitates the removal of workpieces.

Advantage:
- Double neodymium magnetic system for high adhesive force up to 150 N/cm².
- Adhesive force from 6 mm workpiece thickness.
- Sealed against dirt and coolant.

Delivery:
1x permanent magnet clamping plate; incl. adjustable clamps, hex key and instructions.

Notes:
Other dimensions on request.

ATORN Sine bar with permanent-magnet clamping plate

Application:
For highly precise angle grinding, eroding work and measurements.

Execution:
- For very small to large workpieces
- Precision-ground steel base plate, 60 HRC hardened
- Angle setting with gauge blocks
- Clamping repeatability: 10 inch
- Clamping using retaining shears and upper guide shells
- Parallelism tolerance 0.010/100 mm
- Sealed against dirt and coolant
- Pivot range: 0° to 45°

Delivery:
1x permanent magnet clamping plate; with 2 stop rails, chuck wrench, operating instructions

Notes:
Delivered ex-works, postage and packaging excluded.

SAV Permanent-magnet round chuck NEOMICRO

With particularly narrow parallel pole pitch

Application:
For clamping small and thin to medium-sized workpieces.

Execution:
- Powerful magnetic system with neodymium magnets and low magnetic field height of 8 mm.
- Infinitely variable adhesive force adjustment simplifies workpiece alignment.
- Machining on both sides at the centre of the pole plate is possible with dimension J.
- The micro pole pitch of this magnetic clamping plate makes it possible to clamp medium-sized as well as very flat turning, grinding and erosion parts.

Advantage:
- The low magnetic field height is ideal for clamping very thin and small workpieces from a diameter of 150, nominal adhesive force 100 N/cm2 (where A = diameter 100: 70 N/cm2).
- The pole plate can also be machined with holes for driving pins and centring aids, max. incorporation 5 mm.
- Low profile and low weight.

Delivery:
1x permanent round magnet; incl. hex key.

Notes:
Available with flange on request.

Permanent-magnet round chuck FERROMAX

With parallel pole pitch

Application:
For clamping small to large workpieces for sanding and turning work.

Execution:
- Powerful magnetic system with neodymium magnets
- and low magnetic field height.
- All sizes with 1 switching point. Magnetic force infinitely adjustable.
- Possibility of incorporating a centring hole.
- Concentric rings facilitate optical alignment of workpieces.

Advantage:
- Compact construction and hence low weight.
- Nominal adhesive force 150 N/cm², from diameter 250 mm nominal adhesive force 100 N/cm².

Delivery:
1 permanent round magnet; incl. operating key.

Notes:
Available with flange on request.

Permanent-magnet round chuck NEOSTAR

With radial pole pitch

Application:
For round and ring-shaped workpieces.

Execution:
- High magnetic force.
- Concentric rings allow easy alignment of workpieces.
- The magnetic field can be infinitely adjusted up to diameter 300 mm.
- Standard design without through-bore in the centre.

Advantage:
- Balanced design.
- Suitable for high rotation speeds.
- Infinitely variable adjustment of adhesive force.

Delivery:
1x permanent round magnet; incl. hex key.

Notes:
Delivered ex-works, postage and packaging excluded.

Permanent-magnet clamping blocks

With 4 magnetic clamping surfaces

Application:
For parallel and angular grinding of small and medium-sized workpieces.

Execution:
- For flat, angular, coordinate and profile grinding, countersinking and wire erosion, measuring and testing.
- With four magnetic clamping surfaces.
- Robust design with good magnetic force.
- Magnetic field height approx. 2 mm.
- Regrinding possible on all four sides up to the height of the two front panels.

Advantage:
- Firm clamping for small and thin parts.
- Sealed to prevent fluid ingress.

Delivery:
1x permanent magnet clamping block.

Notes:
Ref. no. 030 stainless version with high-alloy chrome steel poles for use on wire eroding machines. Less suitable for grinding, as stainless steel version has reduced adhesive force.

Demagnetising devices

For connection to 230 V AC, 50 Hz, power-on time 100 % (50 % at full load)

Application:
For demagnetising.

Execution:
- For connection to 230 V AC, 50 Hz, power-on time 100 % (50 % at full load).
- Unlike other devices, the intensity of the magnetic field is increased automatically with these devices to correspond to the size of the workpiece, i.e. no workpiece equals low power consumption and low heat development. The devices are therefore also suitable for use underneath a conveyor belt. The devices are fitted with a signal lamp, toggle switch, 3 m cable and power plug.
- Workpieces machined on permanent magnet or electromagnetic clamping plates become slightly magnetised. Demagnetising devices are used to remove this magnetisation. The workpieces are placed on one pole of the device and pushed over to the other pole. The process must be repeated a few times depending on the size and shape of the parts. The plates must not be switched off until the workpieces have been removed, as otherwise they will be magnetised again.
- The demagnetising devices are suitable for
- use in measurement rooms, workshops and
- production lines and have a demagnetisation effect on bearing rings, stamps,
- dies and other tools.

Delivery:
1x demagnetising device incl. power plug and 3 m cable.

Notes:
Particularly ideal for demagnetising high-alloy steels, e.g. ring bearings, stamps and moulds.

Manual demagnetising device

For connection to 230 V AC, 50 Hz, degree of protection IP 40, power-on time 50 %

Application:
For demagnetising the surfaces of larger workpieces. Mobile use.

Execution:
- For connection to 230 V AC, 50 Hz, degree of protection IP 40, power-on time 50 %.
- Handy device with plastic housing for focused demagnetising of large surfaces. The device is also suitable for separating steel parts and for conveying lightweight bulk material. The device is switched on and off via an illuminated pushbutton. Supply cable, 3 m with plug.

Delivery:
1x manual demagnetising device incl. power plug and 3 m cable.

Prod. Gr. 230

Vacuum clamping system and adapter mat set

For dry and wet machining

Application:
For clamping workpieces by means of vacuum. Wide range of workpiece shapes can be clamped. For grinding, milling, drilling and 5-sided machining including all breakouts. VAC-MAT is a thin, soft plastic mat with 77 vacuum holes, suction cups in various sizes with elastic lips on the top and fine bore holes in the centre. The underside features protruding plastic lugs for positioning the VAC-MAT on the vacuum clamping plate.

Execution:
- Since no sealing cords need to be inserted, setup times are significantly reduced and workpieces can be reclamped within a few seconds
- Gentle contact surface against the workpiece prevents clamping surfaces from being damaged
- Prevents surfaces from getting scratched
- No special equipment required
- The elastic sealing cords fill any uneven areas on the workpiece clamping surface. The sealing cord can compensate for up to 0.5 mm of unevenness or curvature
- The modular design allows multiple vacuum plates to be connected across the grid. The operating vacuum to the individual plates is routed through the fasteners

Advantage:
- High retention forces
- Clamping surface with high coefficient of friction
- External and internal contours can be milled through
- The possibility of milling or drilling into the mat ensures precise and clean workpiece cutting edges without burrs
- Universal clamping system for a wide range of workpieces

Delivery:
1x VAC-MAT modular plate, 1x adapter plate, 10x blue VAC-MAT mats, 2x adjustable clamps, 1x assembly tool, 10 m black vacuum sealing cord dia. 4 mm, 1 m vacuum wire spiral hose

Technical data:
- Adapter plate height H: 32.5 mm
- Grid dimension: 12.5 mm
- Vacuum panels couplable: Yes

ATORN Adapter mats

Accessories for vacuum clamping system with adapter mats

Application:

Ident. No. 025: Standard mat.

Ident. No. 050: Hard mat.

Ident. No. 060: For covering unoccupied vacuum fields.

Execution:

- The adapter mats allow machine workpieces to be clamped on five sides in one clamping operation, and openings can be created in external and internal contours
- The service life of the VAC-MAT depends on the number and size of the grooves created when cutting through workpieces
- The workpieces to be clamped must be at least 150 x 200 mm in size
- Accessories for ref. no. 24500010-020

Delivery:

1 PU = 10 VAC-MAT mats

Ident. No. 025

ATORN Grid vacuum plate sets

With Venturi nozzle for dry machining

Application:

For simple geometric workpieces with rough shapes without breakouts or large breakouts that can be sealed with sealing cords (size must be a multiple of the grid).

Execution:

- Simple vacuum generation using compressed air. The built-in vacuum pumps (Venturi system) require an operating pressure of 3.5-6 bar
- The final vacuum is 80 mbar absolute (92 % vacuum)
- A built-in silencer in the vacuum plate reduces the noise of the escaping air
- The plates can be operated either with the integrated Venturi nozzle or with a vacuum pump. A suitable tool is supplied
- All grid vacuum plates can also be connected to conventional vacuum pump no. 24501 110 or no. 24501 120.

Advantage:

- The elastic sealing cords fill and even out minor irregularities and curvatures
- Good sealing, also suitable for rough (e.g. sawn) surfaces
- High retention forces, especially suitable for heavy machining such as milling and grinding

Delivery:

1 vacuum grid plate, 2 adjustable clamps, 3 m pneumatic hose, 10 m vacuum sealing cord diameter 4 mm black, 1 vacuum generator (Venturi nozzle)

Notes:

Conversion set for wet machining included in scope of delivery. A vacuum pump is also needed for wet machining.

Prod. Gr. 2BE

ATORN Slotted vacuum plate sets

With Venturi nozzle for dry machining

Application:
Ideal for light machining tasks such as milling or drilling - e.g. printed circuit boards or electronic components - or also engraving. It is thus also possible to securely clamp workpieces that are much smaller than the clamping surface of the vacuum plate. Workpieces no larger than a postage stamp can be cut out of larger material sections using milling techniques. Individual adaptation to part geometry ensures reliable clamping of almost all conceivable workpiece geometries.

Execution:
- The narrowing of the cross section within the Venturi pipe creates a vacuum, which draws the air in
- Depending on the application, the clamping plate surfaces are equipped with slots. Rubber adapter mats or cover films are required for clamping workpieces that do not cover the entire plate surface
- Noise level of just 57 db (A)
- Vacuum generated by pneumatic vacuum ejector: max. vacuum approx. 5-6 bar. End vacuum of up to 87 % depending on conditions of use. Air consumption approx. 90 l/min
- All slotted vacuum plates can also be connected to conventional vacuum pump no. 24501 110 or no. 24501 120.

Advantage:
- Low overall height
- Rubber adapter mats enable a wide range of applications
- Can be used in HSC (high-speed cutting) applications for milling small contours with the help of plane-parallel rubber adapter mats suitable for milling
- Very small workpieces can be clamped
- Venturi technology requires little maintenance

Delivery:
1x vacuum slotted plate, 2x adjustable clamps, 1x hose connection for quick-action coupling, 3 m pneumatic hose, 1x red rubber adapter mat, 1x connection for standard vacuum pump

Notes:
Conversion set for wet machining included in scope of delivery. A vacuum pump is also needed for wet machining.

ATORN Rubber adapter mats

Accessories for slotted vacuum plates

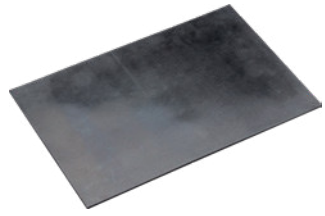
Application:
No. 24502: The rubber adapter mat blue is placed between the workpiece and the vacuum clamping plate, and must be perforated. It covers areas of the clamping plate that are not required and, thanks to its high coefficient of friction, additionally protects the workpiece against slipping.
No. 24505 010, 24505 030, 24505 050: Brown mat (cut): Cannot be face milled, medium friction ideal for drilling through workpieces with small drill hole diameters, reusable workpieces with small drill hole diameters, reusable.
No. 24505 020, 24505 040, 24505 060: Black mat (cut): Can be face milled, low friction, reusable.

Execution:
- **No. 24502:** Available as a roll only

Delivery:
No. 24502: 1x blue rubber adapter mat roll
No. 24505 010, 24505 030, 24505 050: 1x brown rubber adapter mat
No. 24505 020, 24505 040, 24505 060: 1x black rubber adapter mat

No. 24502

No. 24505 010, 24505 030, 24505 050
Outstanding coefficient of friction offers excellent resistance to shifting forces encountered during machining. The height tolerance of the rubber adapter mat is ±0.1 mm.



No. 24505 020, 24505 040, 24505 060
Made from synthetic elastomer. These mats can be face-milled, thereby allowing significantly greater plane parallelism. The rubber adapter mat can be milled up to a depth of 1.5 mm without vacuum loss. Height tolerance ±0.02 mm

Prod. Gr. 2BE

ATORN Sealing cord

Application:
For sealing grid vacuum plates.

Delivery:
1x sealing cord roll, 50 m

Execution:
- Sealing cord 4 mm in diameter and 50 m long

Length (m)		50
Outer Ø (mm)		4
Colour		Black
24502...	Ident. No.	010 ●

Prod. Gr. 2BE

ATORN Vacuum hose
With wire spiral, 10 m

Application:
Connecting hose for vacuum pumps and vacuum plates.

Execution:
- Transparent
- with wire spiral, 10 m

Delivery:
10 m wire spiral hose

Length (m)		10
Outer Ø (mm)		18
Internal Ø (mm)		12
Colour of vacuum suction hose		Transparent
24502...	Ident. No.	020 ●

Prod. Gr. 2BE

amf **Adjustable clamps** (DIN 6314)

Execution:
- Heat-treated steel
- Painted

Notes:

Prod. Gr. 260

Infinitely adjustable clamp, complete

Infinitely adjustable

Application:

For clamping workpieces. It is designed to withstand extremely high loads and is particularly suitable for clamping cutting tools and punches.

Execution:

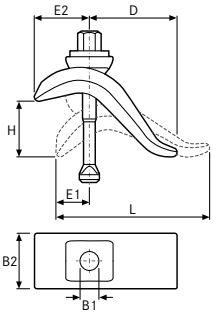
- made of steel, forged, tempered and galvanised.

Advantage:

- The infinitely variable adjustable clamp quickly spans various clamping heights without any additional support and requires little space on the machine table.

Notes:

with screws for DIN 787 T-groove, length 160 mm, the size 17 adjustable clamp can reach a maximum clamping height of 75 mm.



p. 981

Adjustable clamps

Short, continuously adjustable, with U-piece

Application:

For clamping workpieces.

Execution:

- With U-piece
- Suitable for tough conditions, e.g. on presses
- Tempered
- Galvanised and blue passivated

- Infinitely adjustable

Delivery:

With U-piece, though without clamping screw

Notes:

Please order clamping screw separately, see no. 26200.

Deep clamping jaws, model Bulle

Application:
For clamping with draw-down effect.

Execution:
- Tempered
- With burnished finish
- Wedge effect in forward and downward direction

Advantage:
- No protruding clamping screws
- Clamps at every angle to the groove

Delivery:
2 pieces in a box with fastening screws ISO 4762 (10.9), nuts for T-slots DIN 508 and hexagon screwdriver ISO 2936.

Notes:
Can also be supplied for groove widths of 20, 24 and 30 mm. Prices on request.

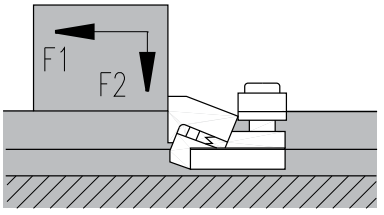
Prod. Gr. 260

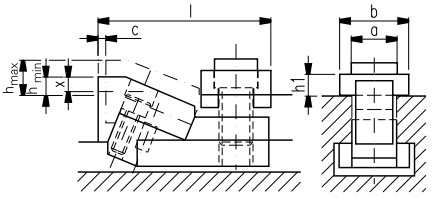
Flat clamp, model Mini-Bulle

Execution:
- With burnished finish
- For flat workpieces
- Wedge effect in forward and downward direction

Advantage:
- The wedge effect of the clamping jaws causes the workpiece to be pressed down firmly and securely onto the machine table. The horizontal forces are absorbed by a screw fitting the size of the slot, which provides for perfect clamping without damaging the table.

Delivery:
2 pieces in a box with fastening screws ISO 4762 (8.8) and hexagon screwdriver ISO 2936.





Suitable for groove width (mm)		12	14	16	18	22

Clamping tool assortments

Basic assortment

Application:
For conventional clamping on machine tables with T-grooves, ideal for toolmaking.

Execution:
- All parts made of heat-treated steel
- Rolled thread
- T-slot screws heat-treated

Delivery:
Ref. no. 26152140: Clamp, 2 pcs. 14×100 mm, 2 pcs. 14×160 mm, clamping supports 4 pcs. Size 2, 4 pcs. Size 3, T-slot screws, 2 pcs. M14×16×63 mm; 4 pcs. M14×16×100 mm; 4 pcs. M14×16×160 mm stud bolts 2 pcs. Size M14×100, 2 pcs. Size M14×160, high nuts 6 pcs. Size M14, extension nuts 2 pcs. Size M14, washers 6 pcs. Size M14,

Other sizes available

Suitable for groove width (mm)		14	16
Suitable for thread		M12	M14

Clamping screw sets

For T-slots

Execution:
- Tempered
- Strength class 8 or 10
- Different clamping heights can be set as required using extension nuts and studs (extension studs).
- Widths across flats are in accordance with ISO standard (DIN ISO 272)

Delivery:
In a sturdy, high-quality wooden box with removable hinged lid.

Notes:
All parts are also available individually on request.
“Nuts for T-slots DIN 508” cannot be used for this size.

Prod. Gr. 260

Sturdy clamping jaws

Application:
For lateral clamping of tall workpieces with draw-down force.

Execution:
- Tall design with precise prism guide
- Basic body made of malleable iron
- Clamping jaws made of case-hardening steel, reversible
- Clamping jaws with smooth side for machined workpieces and knurled side for rough clamping surfaces

Advantage:
- The specified clamping forces are achieved with optimal fastening screws and the maximum permissible torque.

Notes:
To fix the sturdy clamping jaws on the machine table, we recommend the use of two clamping screws.

Suitable T-groove width		12 mm | 14 mm | 16 mm | 18 mm	20 mm | 22 mm | 24 mm | 28 mm | 30 mm

p. 981

Herkules alignment wedges

Application:
For vertical alignment of complex castings or forgings on machine tools, fine adjustment.

Execution:
- Tempered
- With burnished finish

Advantage:
- The straightening wedge can be adjusted slightly at a load of maximum 1/3 F with just hand force.
- The simple and sturdy design ensures a long service life.
- The fine machined wedge surfaces allow careful and precise adjustment, which means that 0.1 mm can be adjusted with ease, either with a knurled thumb screw or with a hexagon screwdriver.
- The double wedge effect results in a large travel and precise vertical movement without lateral offset.

Notes:
For attachments see no. 26161.

Conical washers (DIN 6319)
Case-hardened and phosphated

Application:
For transferring clamping forces in cases where clamping elements need to adapt to uneven clamping surfaces. For use only on drill holes, not on slots.

Execution:
- Case-hardened and phosphatised
- Only use when the conical washer is fully in contact.

Suitable cheese-head screw DIN 912	d2 (mm)	d5 (mm)	b4 (mm)	26208... Ident. No.

Conical washers (DIN 6319)
Pressed and tempered

Application:
For transferring clamping forces in cases where clamping elements need to adapt to uneven clamping surfaces.

Advantage:
- Thanks to the large diameter, these are particularly ideal for clamping via the slot in the case of clamps.

Execution:
- Stamped, pressed and tempered

Suitable cheese-head screw DIN 912	d2 (mm)	d5 (mm)	d1 (mm)	b4 (mm)	26208... Ident. No.

Nuts
For Rhombus T-slots

Application:
For inserting sliding block from above through the neck of the T-groove.

Execution:
- Tempered

- The reduced contact surface in the T-groove results in a lower load capacity compared with comparable DIN 508 sizes.

Notes:
Aluminium version on request.

Loose sliding blocks (DIN 6323)

Application:
For positioning tools on jigs.

Execution:
- C 15 case-hardened and polished

- Ref. no. 212 for small machines = jig groove 12 mm
- Ref. no. 312-322 for small machines = jig groove 20 mm

Advantage:
- When transporting the device, there are no sliding blocks protruding from underneath to cause a problem and the machine table cannot be damaged.

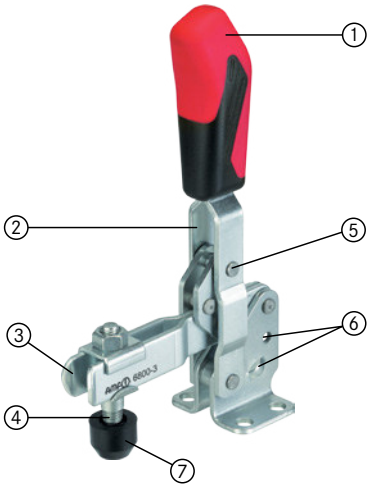
AMF quick-action clamp
The features of our quick-action clamp at a glance

- Ergonomic 2-component handle
- Safety clamping piece with finger protection
- Protection against the loss of pressure screws
- Stainless-steel rivets
- Removable rubber cap



① **Ergonomic 2-component handle** with a high degree of operating comfort due to large hand surface. The grippy surface made of soft components is connected with the hard base material sitting firmly on the clamp.

② **Safety clamp with finger protection** and integrated stop to which there is no access.

③ **Protection against the loss of pressure screws.** For subsequent insertion of pre-assembled pressure screws.

④ Pressure screw (8.8) can be quickly adjusted using the nut washer in tensioner arm.

⑤ **Stainless-steel rivets** in case-hardened bushings. All bearings greased, for durable, consistent functionality.

⑥ The opening angle can be changed by pressing in a stop pin.

⑦ Pressure screw with removable rubber cap.

Quick-action clamp with coloured handles available on request.

AMF variable quick-action clamp

infinitely adjustable clamping force with adjusting screw

advantages at a glance:
- variable clamping height
- clamping of different workpieces
- usable with small batch sizes
- adjustable clamping force
- ergonomic 2-component handle
- protection against loss on clamping arm

clamping force is adjustable with an adjusting screw: for sensitive materials, the clamping force can be reduced to avoid damaging the material, and high forces can be employed where they are wanted.

- significantly stronger internal mechanism than comparable competitive products – higher clamping forces
- high-quality design:
  - galvanised (not nickel-plated) – more durable
  - solid rivets instead of hollow ones – this results in higher forces

Vertical quick-action clamp

With open clamping arm and horizontal base

Application:
For quick clamping of workpieces.

Execution:
- Galvanised and passivated
- Ergonomic, oil-resistant handle with large hand rest and soft components.
- Case-hardened and lubricated bearing bushes

Delivery:
With thrust bolt and protective cap

Notes:
Size 0-4 also available in stainless steel.

Push rod clamp
Small angular base

Application:
For quick and secure clamping on machine tables and appliances.

Execution:
- Compression and tension clamp with small angular base
- Individual parts galvanised
- Long push rod version
- Case-hardened and lubricated bearing bushes
- Ergonomic, oil-resistant handle with large hand rest and soft components.

Advantage:
- Handle can be adjusted at any angle to the base surface

Delivery:
With thrust bolt and protective cap

Notes:

Prod. Gr. 260

Vertical pull clamp

Complete with retainer

Application:
For quick and secure clamping on machine tables and appliances.

Execution:
- Galvanised and passivated
- Hook tempered
- Case-hardened and lubricated bearing bushes
- Rivet made of stainless steel
- Oil-resistant handle with large handle surface and soft components

Prod. Gr. 260

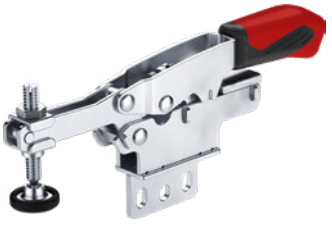
Horizontal clamp with variable clamping height

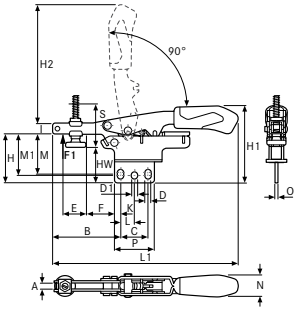
With open clamping arm and vertical base

Application:
Quick-action clamp with infinitely adjustable balancing function for workpieces with different clamping widths.

Execution:
- galvanised and passivated.
- ergonomic, oil-resistant handle with large hand rest and soft components.
- protection against the loss of the clamping screw on the end of the clamping arm. complete with zinc-plated clamping bolt
- Size 20 clamping bolt M6 x 40 mm
- Size 50 clamping bolt M8 x 39 mm

Advantage:
- variable clamping height, for clamping different workpieces
- used for small lot sizes
- infinitely adjustable clamping force
- ergonomic 2 component handle
- protection against loss on clamping arm





The clamping force can be infinitely adjusted using the adjusting screw

Dividers

Application:
For horizontal and vertical milling, drilling, finishing and marking.

Execution:
- Body made from cast iron, dividing disc made of steel, hardened and polished, concentricity tolerance of spindle: 0.02 mm, straightness tolerance of housing: 0.02 mm.
- Direct division: via dividing plate with 24 positions for dividing 2-3-4-6-8-12-24.
- Graduation via scale and adjustable vernier scale, scale interval: 1°.

Delivery:
1x ORION divider, direct/grad.

Notes:
Delivered ex-works, postage and packaging excluded.

ORION® Grinding and inspection vices, type OP-F

Actuation via hexagon key

Application:
For horizontal, vertical and lateral grinding, inspection and eroding tasks.

Execution:
- Made of alloyed tool steel.
- Hardened and precision-ground.
- Quick adjustment.
- Horizontally and vertically ground vee block.
- Perpendicularity tolerance 0.005 mm/100 mm (base surface to fixed jaw clamping surfaces).
- Parallelism tolerance 0.005 mm/100 mm (base surface to upper guide plate).
- Ref. no. 210-230, parallelism tolerance 0.005 mm/100 mm (base surface to upper guide plate).

Delivery:
1x grinding and control vice OP-F; incl. Hexagon socket wrench

Notes:
Type OP-F with clamping screw on the upper side

ORION® Grinding and inspection vices, type OP-G

Actuation via trapezoidal spindle

Application:
For horizontal, vertical and lateral grinding, inspection and eroding tasks.

Execution:
- Made of alloyed tool steel.
- Hardened and precision-ground.
- Adjustment via trapezoidal spindle.
- Horizontally ground vee block.
- Perpendicularity tolerance 0.005 mm/100 mm (base surface to fixed jaw clamping surfaces).
- Parallelism tolerance 0.005 mm/100 mm (base surface to upper guide plate).

Delivery:
1x grinding and control vice OP-G

ORION® Precision sine vices, type OPS-S

Actuation via trapezoidal spindle

Application:
For grinding and inspection tasks.

Execution:
- Made of alloyed tool steel.
- Hardened and precision-ground.
- Adjustment via trapezoidal spindle.
- Horizontally ground vee block.
- Perpendicularity tolerance 0.005 mm/100 mm (base surface to fixed jaw clamping surfaces).
- Parallelism tolerance 0.005 mm/100 mm (base surface to upper guide plate).
- Precise angular adjustment achieved using gauge blocks.
- Angular deviation at 45° +/- 15 arc seconds.
- Hardened and polished bearing and mounting bolts with a tolerance of 0.001 mm.
- The clamp can be positively locked at any angle.

Delivery:
1x precision sine bar vices OPS-S

Notes:

ATORN Quick-action clamping drill vices

Application:
For quick and safe clamping, in particular for workpiece series machining; can be used with guide rails; clamping on base and side; also suited for light milling tasks.

Execution:
- Special cast iron body
- Flat and sturdy version
- Max. clamping force 10 kN
- Positive locking engagement

Advantage:
- Quick jaw adjustment and clamping with just one lever
- One-hand operation
- Large clamping range

Delivery:
1x quick-action clamping drill vice including fasteners

ORION® Drill vices

Application:
For light machining work on drill presses and pillar drills.

Execution:
- Made from grey cast iron
- Precise clamping thanks to long flat rail guide
- Clamping jaws with steps and vee blocks
- Operate by hand or by toggle lever

Delivery:
1 pc. Drill vice

Drill vices BOF

Application:
Secure clamping and fixing of workpieces on drills and measuring machines

Execution:
- Made from grey cast iron
- Means of attachment on side and front face
- Long guide for the moving jaws also in outer clamping range
- Both jaws have a support surface for clamping flat workpieces
- Clamping jaws are reversible, one side is smooth or has longitudinal and lateral vee blocks, and the other side is knurled and polished on both sides

Delivery:
1 pc. Drill vice BOF

Manual vices for drills

Application:
Secure clamping and fixing of workpieces on drills and measuring machines

Execution:
- Basic body made of grey cast iron
- Universal means of attachment thanks to clamping slots and slotted holes
- Fixed clamping jaws with vee blocks
- Both jaws with step for clamping flat workpieces
- Black oxide-coated jaws and spindle

Delivery:
1 pc. Handheld drill vice

Notes:
Ref. no. 200 with 3 clamping options: horizontal, vertical and lateral.

Flott (felix) 2.0 drill vice

[felix] 2.0

Application:
- Easy and safe drilling thanks to the innovative Felix Röwekämper drill vice
- The ideal drill vice for freely adjustable workpiece clamping
- Easy, fast, safe and better to use
- The vice can be clamped to the workbench in just two operations, leaving it precisely adjusted and secure.

Version:
- Patented clamping mechanism requires only one operation to clamp the vice
- Hardened and precision-ground clamping jaws
- Vee block jaws with shoulder, horizontal and vertical recesses
- Increased travel and larger clamping width

Advantage:
- No additional clamping equipment is required
- The vice cannot be twisted or knocked out of place thanks to the comprehensive occupational safety measures (anti-rotation lock)
- Vice can be positioned freely and is fully movable
- Short setup time thanks to fast clamping (up to 95 % quicker)
- For a wide range of workpieces

Scope of delivery:
One Flott (felix) 2.0 drill vice; includes fastening material.

Ident. No. 010–020

RS machine vices

Manual mechanical clamping system without power intensifier

Application:
For drilling and milling.

Execution:
- Made of special cast iron for a wide range of applications.
- Long guide for the movable jaw.
- Power transmission via the threaded spindle.
- Reversible hardened clamping jaws: one side is smooth and the other side is grooved.
- Can be used on graduated swivel plates.
- For matching swivel bases, see no. 28881.
- Vice body and swivel base have 20H7 longitudinal slots for precision alignment.

Advantage:
- Entire clamping range can be bridged by turning the hand crank.
- Spindle is protected against dirt and swarf.
- Extensive range of jaws.

Delivery:
1x RS machine vice; including SGN standard jaws and hand crank

Notes:
Transverse grooves on request.

MSR machine vices

Manual mechanical clamping system without power intensifier

Application:
For universal use on milling machines and machining centres.

Execution:
- Body made of hardened steel (60 HRC).
- Hardened (60 HRC) and polished guides.
- Repeat clamping accuracy: 0.02.
- Aligned on the machine table via longitudinal and transverse grooves 20H7.
- Can be used on graduated swivel plates.

Advantage:
- Bolt system for rapid clamping range adjustment.

Delivery:
1x MSR machine vice, including spanner, stop, pull-down jaws and 4x adjustable clamps

Information block: high-pressure machine vices

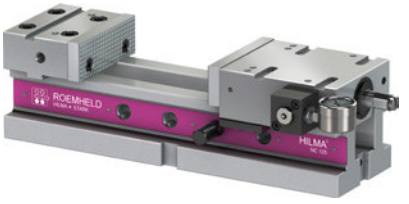
the right companion for every application

We offer the following range of high-pressure machine vices:
- Mechanical/mechanical; mechanical/hydraulic
- With and without clamping force booster
- Jaw widths of 90-200 mm
- Clamping widths of 0-893 mm
- Clamping force of 20-60 kN
- With and without quick adjustment

We also offer a wide range of accessories:
- Screw-in jaws/screw-on jaws/pull-down jaws etc.
- Stops
- Angled drives
- Adjustable clamps

ATORN

HILMA



kesel

ORION® ROHM

ATORN High-pressure machine vices

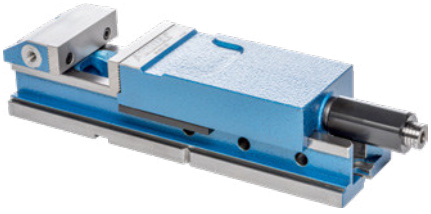
Mechanical/hydraulic

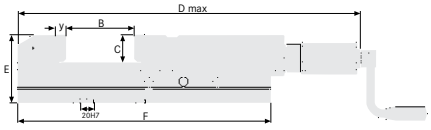
Application:
For individual and series production on drills and milling machines.

Execution:
- Mechanical-hydraulic clamping system with mechanical pretensioning via hand crank
- Forged steel body
- Hardened and polished guideways
- Encapsulated stainless steel spindle
- With power transmission/preset clamping force in stages
- Alignment on the machine table via slots and T-slot nuts
- Aligned on the machine table via grooves and sliding blocks, art. no. 26196

Advantage:
- Easy and fast adjustment of the clamping range using the bolt system
- Pretensioning for elastic parts (stacked mounting)

Delivery:
1x vice; including 1 set of standard jaws (1 side smooth, 1 side grooved) and hand crank





Jaws width (mm)		90	125
Jaws height (mm)		39.6	39.6
Body length (mm)		370	460
Max. length (mm)		551	683
Min./max. clamping width		0-150 mm	0-220 mm
Tension force (kN)		25	40

ATORN Reversible jaws type WB-S

Accessories for high-pressure machine vices, art. no.: 28832

Application:
Reversible jaws for universal use according to requirements. Jaws are screwed directly into the screw-on jaws.

Execution:
- One side with longitudinal grooves and one smooth side
- Hardened and polished
- Suitable for art. no.: 28832

Advantage:
- Reversible

Delivery:
1 set of reversible jaws type WB-S; incl. fastening screws

Type		Reversible jaw	Reversible jaw
Jaw design		Longitudinal grooves | Smooth	Longitudinal grooves | Smooth

Prod. Gr. 281

RB-K high-pressure machine vices

Mechanical/hydraulic

Application:
For individual and series production on drilling and milling machines.

Execution:
- Mechanical-hydraulic clamping system with mechanical pretensioning via hand crank.
- Clamping force can be preset via limit stop.
- Steel body.
- Bolt system for rapid clamping range adjustment.
- Clamping repeatability with identical clamping force: 0.01 mm.
- Hardened and ground guideways.
- Width of forged jaws 113, 135 and 160 mm, width of nodular cast iron jaws 200 mm.
- Used on graduated swivel plates.
- Encapsulated spindle.

Advantage:
- Clamping force preset in increments.
- High wear resistance thanks to hardened jaw guides.
- Optimum coolant and chip flow.
- Can be used without power boosting for delicate clamping tasks.

Delivery:
1 x high-pressure machine vice RB-K; incl. 1 set of standard jaws/1x hand crank

Notes:
Vices with jaw width 250 and 315 on request.

SGN standard jaw

Jaws, screw-on type

Application:
Reversible jaws for universal use according to requirements.

Execution:
- One side grooved and one side smooth.
- Hardened and ground.

Advantage:
- Reversible.

Delivery:
1x standard jaw SGN; incl. fastening screws

Notes:
Accessories for high-pressure machine vices, no.: 28880; 28832

Caution: The drilling pattern for ATORN is identical, although the jaws slightly protrude to the side!

SPR vee block jaw

Jaws, screw-on type

Application:
Reversible jaws for universal use according to requirements. Cylindrical components can be clamped without any problems.

Execution:
- Hardened and ground.
- With vertically and horizontally ground vee blocks.

Advantage:
- Reversible.

Delivery:
1x prism jaw SPR; incl. fastening screws

Notes:
Accessories for high-pressure machine vices, no.: 28880; 28832

ATORN High-pressure machine vices

Mechanical/mechanical clamping system with power intensifier

Application:
For NC machines, machining centres, tool manufacture, mould making, fixture construction and series production.

Execution:
- With reversible stepped jaws
- Robust cast steel basic body
- Hardened and polished guideways
- Preset clamping force on the drive spindle
- Rough adjustment of the clamping range by offsetting the jaws on the clamping slide
- Mechanical/mechanical clamping system, with power transmission via toggle joint
- Includes clamping nipple borehole for ATORN K10.2 zero-point clamping system (gauge 200 mm)

Advantage:
- Chip guard prevents swarf penetrating inside the body
- Largely maintenance-free
- Clamping repeatability with identical clamping force: 0.01 mm

Delivery:
1x MM-G high-pressure machine vice; including stepped jaws and hand crank

Notes:
Angled gear on request.

Stepped jaw set type SB-K and SB-G

Accessories for ATORN MMG and RÖHM RKE vices

Application:
Stepped jaws for universal use according to requirements. The jaws are screwed directly into the screw-on jaws.

Execution:
- With smooth jaw steps
- Hardened and polished
- Suitable for art. no.: 28874 and 28878

Advantage:
- Not reversible
- Easy and quick changing

Claw jaw set type KB-K; KB-G and KB-O

Accessories for ATORN MMG and RÖHM RKE vices

Application:
Claw jaws for universal use according to requirements. The jaws are screwed directly into the screw-on jaws.

Execution:
- Hardened and polished
- Suitable for art. no.: 28874 and 28878
- **Ident. No. 212–215:** With claws and jaw steps
- **Ident. No. 216–217:** With claws without jaw steps

Advantage:
- Not reversible
- Easy and quick changing

Delivery:

ATORN Clamping jaw set, soft steel, type SBW-S and SBW-A

Accessories for ATORN MMG and RÖHM RKE vices

Application:

Clamping jaws for universal use according to requirements. The jaws are screwed directly into the screw-on jaws.

Execution:

- Designed for the insertion of special variants
- Suitable for art. no.: 28874 and 28878
- **Ident. No. 218–219:**
  - Steel version, suitable for case hardening and nitride hardening
  - Not hardened and ground
- **Ident. No. 220–221:**
  - Aluminium version
  - Not hardened and polished

Advantage:

- **Ident. No. 218–219:**
  - For custom adaptation according to machining requirements
  - Easy and quick to change
- **Ident. No. 220–221:**
  - Reversible
  - For individual adaptation according to machining requirements
  - Easy and quick changing

Delivery:

V-block jaw type PB

Accessories for ATORN MMG and RÖHM RKE vices

Application:
V-block jaws for universal use according to requirements. The jaws are screwed directly into the screw-on jaws.

Execution:
- With horizontal and vertical V-block
- Hardened and polished
- Suitable for art. no.: 28874 and 28878

Advantage:
- Not reversible
- For clamping round components
- Easy and quick changing

Support jaws with movable, oscillating jaw

Accessories for art. no.: 28874125 and 28878125

Application:
For clamping non-parallel workpieces, cast parts and moulded workpieces.

Execution:
- For flexible clamping of unmachined parts
- Claw inserts can be positioned anywhere on the support jaws
- Accessories for art. no.: 28874125 and 28878125

Delivery:
1 set of support jaws; incl. Fastening screws; without claw inserts

Type		Carrier jaw

ATORN Stepped jaws, raised

Accessories for art. no.: 28874125 and 28878125

Application:
For special machining applications. In case of insufficient access to the component or the component needs to be machined from the underside.

Execution:
- For difficult machining conditions and components that are difficult to access
- Components can be moved closer to the spindle if spindle travel is limited
- Accessories for MM-G high-pressure machine vices
- Accessories for art. no.: 28874125 and 28878125

Advantage:
- Improves the accessibility of components

Delivery:
1 set of raised stepped jaws, incl. fastening screws

Type		Stepped jaw | raised

RÖHM Reversible and interchangeable jaws

For Röhm RKE, RKZ-M, RZM

Execution:
- **Ident. No. 300:**
  - SGN normal jaws, one side smooth and one side grooved.
  - Hardened and ground.
- **Ident. No. 301:**
  - SGNf standard reversible jaws.
  - One side with fine grooves and one side with longitudinal grooves.
- **Ident. No. 302–304:** SKB claw jaws with fine step, 2.5 mm clamping depth.
- **Ident. No. 302–307:** Hardened claw tips.
- **Ident. No. 305–307:**
  - SKB claw jaws without step.
  - Universal for clamping depth.

Advantage:
- **Ident. No. 301:** For increasing specific surface pressure (higher retention forces).

Delivery:
Ident. No. 300–301: 1 set of standard jaws; including fastening screws
Ident. No. 302–307: 1 set of claw jaws; including fastening screws

Prod. Gr. 284

High-pressure clamp MH-S 125

Mechanical/hydraulic

Application:
For NC machines, machining centres, tool manufacture, mould making, fixture construction and series production.

Execution:
- Spindle made of high-strength special steel
- Basic body, fixed jaw, moving jaw made of case-hardening steel, hardened on all sides
- Hardened and polished guideways
- Transverse grooves and fastening threads on top of the fixed and movable jaw are used for mounting add-on stepped jaws and grip inserts
- Pull-down quick-change jaws can also be used
- Lateral thread for workpiece stop
- Can be used with rhomboid T-slot nuts and interchangeable slides for multiple clamping - installation without tools
- Bed length up to 1,200 mm and hydraulic actuation available on request
- Side mounting holes for bed length 470 mm

Advantage:
- The pre-selected clamping forces enable a workpiece positioning repeat accuracy of ≤ 0.01 mm
- The clamping force can be preselected by the number of spindle rotations
- Spindle mechanically locking for purely mechanical clamping
- Rigging pins can be used for quick presetting
- 20H7 longitudinal and transverse grooves as standard for quick positioning

Delivery:
1x MH-S high-pressure clamp; including reversible screw-in jaws (1 side grooved longitudinally and transversely, 1 side smooth) and hand crank (two-part)

ATORN Stepped jaws attachment for MH-S

Accessories for the 28858001-008

Application:
Larger clamping ranges are achieved by attaching them to the movable and fixed jaws.

Execution:
- Different versions available to suit a range of applications
- Jaws hardened and polished
- Accessories for MH-S art. no.: 28858001-008

Advantage:
- Increase the clamping range by mounting on the movable and fixed jaws
- Two clamping stages can be used

Delivery:
1x stepped jaw attachment for MH-S; incl. fastening screws

ATORN Hardened and ground pull-down quick-change jaws

accessories for MH-S125 28858001-008

Application:
A plain jaw with permanent magnets forms the basic jaw for the pull-down quick-change jaws.

Execution:
- Jaws hardened and polished on all sides
- Suitable for art. no.: 28858001-008

Advantage:
- Easy and quick changing
- The right quick-change jaw for every application
- For clamping unmachined and finished parts

Delivery:
1x interchangeable jaw for MH-S; incl. fastening screws

Ident. No. 042
Plain jaw with two permanent magnets

ATORN Rhombus T-sliding blocks

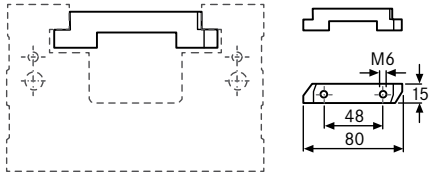
accessories for MH-S125 28858001-008

Application:
For the secure mounting of workpiece rests.

Execution:
- Hardened and polished
- Accessories for MH-S art. no.: 28858001-008

Advantage:
- A carbide pin can be inserted for simultaneous use as a workpiece stop

Delivery:
1x rhombic T-sliding block



Type		rhombic T-slot nut

ATORN interchangeable slide for MH-S

accessories for MH-S125 28858001-008

Application:
The interchangeable slide allows several workpieces to be clamped. Tool-free installation.

Execution:
- Hardened and polished
- Without screw-in jaws
- Accessories for MH-S art. no.: 28858001-008

Advantage:
- Interchangeable slide allows for clamping of several workpieces
- Installed without tools

Delivery:
1x interchangeable slide for MH-S

ROEMHELD HILMA ▪ STARK NC high pressure machine vices

Mechanical/hydraulic

Application:
Particularly suitable for use on vertical machining centres, in tool manufacture, mould making and jig manufacturing, and in production.

Execution:
- Mechanical-hydraulic clamping system.
- Version with clamping force display allows continuous, precise clamping force application.
- Steel body.
- Rigging pins can be used for rough adjustment, hand crank can be used for fine adjustment.
- Clamping repeatability with identical clamping force: 0.01 mm.
- Hardened and ground guideways.

Advantage:
- Spindle and power transmission integrated into carriage for protection.
- Threaded holes on both sides on the fixed jaw for mounting precision limit stops.
- Longitudinal or transverse groove for quick positioning 20 H7.

Delivery:
1x NC vice, including interchangeable hardened jaws (1 side smooth, 1 side grooved) and hand crank. Without clamping force display.

Notes:
On request: Version with clamping force display (actual value display). hydraulic/hydraulic clamping system, actuated via hydraulic unit available on request.

Prod. Gr. 281

Claw jaw set type KB-K, KB-G and KB-O

Accessories for Allmatic vices

Application:
Claw jaws for universal use according to requirements. Jaws are screwed directly into the screw-on jaws.

Version:
- Hardened and ground
- **Ref. no. 238-241:** With claws and jaw steps
- **Ref. no. 242-243:** With claws, without jaw steps

Advantage:
- Not reversible
- Easy and quick to exchange

Scope of delivery:
1 set of claw jaws including fastening screws

Ident. No. 238–239

Ident. No. 240–241

Soft clamping jaws set type SBW-S and SBW-A

Accessories for Allmatic vices

Application:
Soft clamping jaws for universal use according to requirements. Jaws are screwed directly into the screw-on jaws.

Version:
- Not hardened and ground
- Designed to accommodate special designs
- **Ref. no. 244-245:** Steel version
- **Ref. no. 246-247:** Aluminium version

Advantage:
- Reversible
- For custom adaptation according to machining requirements
- Easy and quick to exchange

Scope of delivery:
1 set of soft clamping jaws, including fastening screws

Ident. No. 244–245

Ident. No. 246–247

PB vee block jaw

Accessories for Allmatic vices

Application:
Vee block jaws for universal use according to requirements. Jaws are screwed directly into the screw-on jaws.

Version:
- With horizontal and vertical vee block
- Hardened and ground

Advantage:
- Not reversible
- For clamping round components
- Easy and quick to exchange

Scope of delivery:
1x vee block jaw including fastening screws

Type		Vee block jaw	Vee block jaw
Jaw design		Smooth | With prism	Smooth | With prism

Prod. Gr. 281

5-axis machine vices
The right companion for every application

We offer the following range of 5-axis machine vices:
- Mechanical/mechanical
- with and without voltage amplifier
- Jaw widths of 100–125 mm
- Clamping width of 0-1000 mm
- Clamping force of 20–40 kN

We also offer a wide range of accessories:
- Screw-in jaws/screw-on jaws/pull-down jaws, etc.
- Stops
- Swing / grip jaws
- Adjustable clamps

ATORN

"The compact one"
ATORN compact clamp
no. 28741 125

"The all-rounder"
ATORN 5-axis multi-tensioner two in one
no. 28759 701-704 / 710-713

"The power pack"
ATORN 5-axis centre clamping device AZS-100
no. 28763 010

ATORN Compact 5-axis machine vice
Mechanical/mechanical clamping system

Application:
The compact design ensures a maximum degree of freedom and enables optimum accessibility for 3 and 5 axis machining. Suitable for milling machines and machining centres.

Execution:
- Sturdy basic body made of GJS-600 spheroidal graphite iron
- Patented quick adjustment of the clamping width
- Large clamping width due to the use of stepped jaws
- Re-clamping Belleville washer package
- Stepped jaws with snap-in device for snap-in rails
- Clamping width can be extended on request

Advantage:
- Very low loss of clamping force and secure retention forces
- Encapsulated spindle means it is not affected by dirt
- No thread in clamping range
- Easy to operate with a torque wrench (½ inch square drive)

Delivery:
1x compact clamp; including stepped jaws and 4x adjustable clamps

Notes:
Clamp can be operated with the square drive of a standard ratchet tool or torque wrench.

p. 1022 p. 1023

Type		Compact clamp
Jaws width (mm)		125

Prod. Gr. 280

Attention: You can find suitable T-sliding blocks in the mechanical clamping elements area

ATORN Stepped jaws

Accessories for 28741125 and 28730 125 and 225

Application:
For clamping parallel workpieces. Reversible for increasing the clamping distance.

Execution:
- Stepped jaw hardened and polished
- With clip-in device for stepped rail
- Accessories for art. no.: 28741125 and 28730125/225

Delivery:
1 set of stepped jaws incl. fastening screws

Type		Stepped jaws
Jaws width (mm)		125
Jaws thickness (mm)		78/78
Jaws height (mm)		39.5
Min./max. clamping width		0-90 mm
Min./max. clamping width 2		0-178 mm
28741...	Ident. No.	215 ●

Prod. Gr. 280

ATORN Grip jaws

Accessories for 28741125 and 28730 125 and 225

Application:
For flexible workpiece clamping for a wide range of machining processes.

Execution:
- Multi jaws with grip inserts, hardened and polished
- Grip inserts with smooth and ribbed sides
- Ideal for clamping uneven components
- Accessories for art. no.: 28741125 and 28730125/225

Delivery:
1 set of multi jaws including 4x grip inserts and 4x contact sleeves and screws

Type		Multi jaws with gripper inserts
Jaws width (mm)		160
Jaws thickness (mm)		78/105
Jaws height (mm)		25
Min./max. clamping width		10-202 mm
28741...	Ident. No.	235 ○

Prod. Gr. 280

ATORN Grip jaws, pendulum jaws

Accessories for 28741125 and 28730 125 and 225

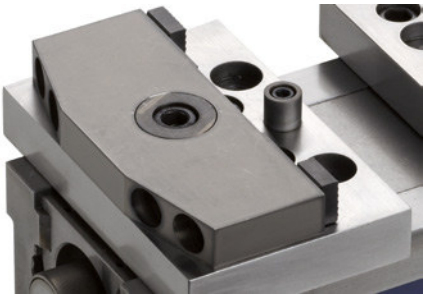
Application:
For clamping non-parallel workpieces, cast parts and moulded workpieces.

Execution:
- Hardened and polished pendulum jaw with grip inserts
- With two fixed carbide grip inserts
- Accessories for art. no.: 28741125 and 28730125/225

Advantage:
- Compensation of saw cuts; moulded and cast parts without two parallel sides

Delivery:
1x pendulum jaw with 2x carbide grip inserts

Notes:
For mounting on movable multi jaw



Type		Pendulum jaw with gripper inserts
Jaws width (mm)		156
Jaws thickness (mm)		62
Jaws height (mm)		20
Min./max. clamping width		6-168 mm
28741...	Ident. No.	245 ○

Prod. Gr. 280

ATORN Clamping jaws/accessories

Accessories for 28741125 and 28730 125 and 225

Application:

Ident. No. 250: For expanding the clamping width up to max. 240.0 mm. Simply screwed onto the stepped jaws, modifying the range of applications of the clamp.

Ident. No. 251: For reducing the clamping width. Simply screwed onto the stepped jaws, modifying the range of applications of the clamp.

Ident. No. 252–253: Grip serration of jaws improves workpiece retention. The integrated step allows for the proper positioning of workpieces.

Ident. No. 254–255: The stepped bars are not screwed, but simply clipped in. This nevertheless guarantees a secure and sturdy hold. In addition, there is no slipping; even when using compressed air and coolant.

Execution:

- **Ident. No. 250:**
  - For screwing onto the stepped jaws for 5-axis compact machine
  - Smooth clamping jaws
  - Clamping width extension +62.0 mm
- **Ident. No. 250–253:** Accessories for art. no.: 28741125 and 28730125/225
- **Ident. No. 251:**
  - For slim and small components
  - Clamping width reduction -8.0 mm
- **Ident. No. 251–255:** For mounting on stepped jaws on a 5-axis compact machine vice
- **Ident. No. 252–253:** Clamping step with serrated toothing
- **Ident. No. 254–255:**
  - Hardened and polished stepped rails
  - Stepped rails are “clipped in” by hand without tools

Advantage:

- **Ident. No. 254–255:** Prevents chips from entering underneath the stepped rail

Delivery:

Ident. No. 250–251: 1x set of screw-on jaws, including fastening screws

Ident. No. 252–253: 1x set of grip jaws; including fastening screws

Ident. No. 254–255: 1 set of stepped rails

Prod. Gr. 280

ATORN AVM 5-axis clamp

Mechanical/mechanical clamping system.

Application:

The AVM is a manually mechanically actuated component clamp without power transmission for clamping all conventional materials. It features a technically optimised quick-change jaw system that allows replacement in seconds.

Execution:

- Jaw quick-change system
- For all conventional materials
- For workpieces of various sizes and geometries
- For machining series and individual parts
- Operation requires one single wrench size only - the same wrench size is also used for modifications
- The clamping centre can be positioned freely
- Clamping is possible on conventional zero-point clamping systems with a 200 mm pitch

Advantage:

- A high level of accuracy is transferred from the machine to the workpiece
- Good accessibility (minimal interference contour)
- Easy to use
- Easy to clean
- Large clamping range

Delivery:

AVM 5-axis clamp without jaws, 1 pc

Type	Jaws width (mm)	Body height (mm)	Body width (mm)	Body length (mm)	Min./max. clamping width	Tension force (kN)	Groove width (mm)	Width across flats	28765... Ident. No.

AVM interchangeable jaw grips

Accessories for AVM 5-axis clamp

Version:
- Jaws for jaw quick-change system
- Hardened and polished; stepped jaws side 1 step with grip toothing; stepped jaws side 2 with steps, top with grip toothing and bottom with smooth finish
- **Ref. no. 022:** Unhardened and roughly machined; freeforms can be freely accommodated according to user requirements

Advantage:
- Basic system for quick jaw change
- **Ref. no. 020-021:** With dimension grid for better clamping distribution

Scope of delivery:
1 set of clamping jaws for AVM 5-axis clamp

Prod. Gr. 280

Workpiece rest set

Accessories for AVM 5-axis clamp

Application:
The rest set provides the user with the option of fastening workpieces in the clamp at different clamping heights.

Execution:
- Support strips in different heights
- Fastening with the aid of supplied clamping brackets for quick clipping in

Advantage:
- Fasten quickly and securely
- Clip fastening
- Can be changed in a few seconds

Delivery:
1 set of workpiece rests in wooden box, 5 different heights and 4 clamping brackets

28765...	Ident. No.	090 ●

Prod. Gr. 280

Direct fastening screw

Accessories for AVM 5-axis clamp

Application:
The direct fastening screw is used to directly fasten the clamp through the basic body on the machine table or on a zero-point clamping system. Holes in the clamp can be subsequently sealed by means of a sealing cap.

Execution:
- The set consists of two screws with washers and one sliding block

Advantage:
- No interference contour due to adjustable clamps

Delivery:
One set of direct fastening screws, incl. accessories

28765...	Ident. No.	091 ●

Prod. Gr. 280

5-A two-in-one multi-clamp set

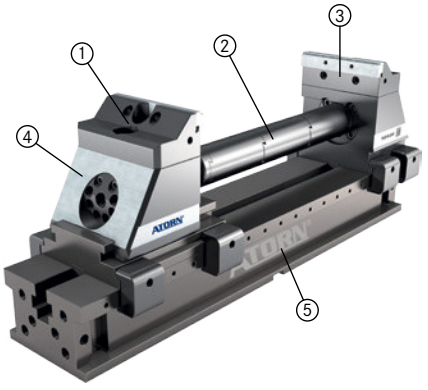
Incl. 2 standard jaws

Application:
Unique innovative system design that combines two basic applications in one product. Two-in-one for use as a 5-axis or multi-clamping system. Highly flexible, modular jaw range, positive-locking jaw connection.

Execution:
- The position of the fixed and movable jaws on the rail can be altered so that large and small parts are always accommodated centrally relative to the table
- System is infinitely extendable using the adapter set (available on request)
- When clamping with an increased clamping width, the clamping distance is only 30 mm less than rail length. Example: With a rail length of 400 mm, the clamping width can be 370 mm. Only using the large part jaw
- Positive-locking jaw interface
- Easy to clean: If necessary, the entire system can be disassembled, cleaned and reassembled in just a few minutes
- 100 mm clamping range without adjustment
- 40 kN clamping force at a tightening torque of 85 Nm
- Torque wrench 20-120 Nm ref. no. 52240120; screwdriver bit AF 12 hex 1/2 drive ref. no. 58688320

Advantage:
- Extremely stiff for low vibration
- Two in one: The system can be used as a 5-axis and multi-clamping system. This is a unique feature. The base is an ATORN clamping rail from the 120 series
- Tool-free spindle extension - mounting and removal in one click. Smart clamping solution at a great price
- Simple and straightforward to use. The system can be changed over very quickly
- Optimised interfering edge design

Delivery:
1x clamping rail, 1x complete 5-axis system, 2x standard jaws, 2x screw-in jaws, spindle extensions (number of pieces dependent on version and rail length)



Ident. No. 701
① Stable, low-vibration machining, ② Spindle can be extended without tools, ③ Comprehensive, sophisticated accessories
④ 2-in-1: Clamping rail also for use as a multiple clamping rail

Example configuration: 1,200 mm, 2x 600 mm clamping rails. The ATORN adapter set is required to extend or adapt clamping rails.

Example configuration: increased clamping width with large-part jaw

5-axis multi-clamp screw-on jaws

Accessories for 5-A two-in-one multi-clamp

Application:
Ident. No. 720–721: The standard screw-on jaw is mounted onto the 5-axis structure of the multi-clamp. It can only be used in one mounting direction as it has been designed for ideal accessibility.
Ident. No. 722: The large-part screw-on jaw is mounted onto the 5-axis structure of the multi-clamp. It is used for larger components requiring an enlarged contact surface. Required for the VS clamping variant.
Ident. No. 723: The soft screw-on jaw is mounted onto the 5-axis structure of the multi-clamp. Free-form surfaces can be inserted freely into the jaws for machining finished parts.
Ident. No. 724–725: The smooth screw-on jaw is mounted onto the 5-axis structure of the multi-clamp. This jaw does not feature any clamping steps, but offers several mounting holes that enable workpieces to be attached.
Ident. No. 727–728: The large-part screw-on jaw with turntable is mounted onto the 5-axis structure of the multi-clamp. It is used for larger components requiring an enlarged contact surface. The jaw features an integrated turntable. This is used to compensate for raw parts that have not been sawed parallel. Required for the VS clamping variant.

Execution:
- Accessories for 5-axis multi-clamp art. no.: 28759 701-704/710-713
- **Ident. No. 720–721:** For 120 system
- **Ident. No. 720–722:** To accommodate screw-in jaws
- **Ident. No. 722:** For 120 mm system
- **Ident. No. 723:**
  - Can be adapted to requirements
  - For free machining
- **Ident. No. 724–725:**
  - Without step
  - With mounting holes for screw-in jaws

Advantage:
- **Ident. No. 722:** Expands the clamping width of the clamping system

Delivery:
Ident. No. 720–721: 1x standard jaw
Ident. No. 722: 1x jaw for clamping large parts, incl. fasteners
Ident. No. 723: 1x soft standard jaw

ATORN 5-axis multi-clamp screw-in jaws

Accessories for 5-A two-in-one multi-clamp

Application:

Ident. No. 750–751: The soft screw-in jaws are integrated into screw-on jaws for the 5-axis multi-clamp. Freeform surfaces can be inserted freely into the jaws for machining finished parts.

Ident. No. 752–753: The screw-in jaws with grip steps are integrated into the screw-on jaws of the 5-axis multi-clamp. Both sides of the jaw feature grip serration with claws. This provides the perfect hold for any component.

Ident. No. 754–755: The screw-in jaws with smooth steps are integrated into the screw-on jaws for the 5-axis multi-clamp. Both sides of the jaw feature a smooth clamping surface. This is mainly intended for components with delicate surfaces and finished parts.

Ident. No. 756–757: The combination screw-in jaws are integrated into the screw-on jaws of the 5-axis multi-clamp. One side features grip serration and the other is smooth, allowing for the integration of raw and finished part clamping in one set of jaws.

Execution:

- Accessories for 5-axis multi-clamp art. no.: 28759 701-704/710-713
- **Ident. No. 750–755:** For screwing into screw-on jaws for 5-axis multi-clamp
- **Ident. No. 756–757:**
  - Smooth step on one side
  - Step and claw on one side

Delivery:

Ident. No. 750–751: 1x soft screw-in jaw

Ident. No. 752–753: 1x screw-in jaw with claws and steps

Ident. No. 754–755: 1x screw-in jaw with steps

ATORN 5-axis multi-clamp Flex Mov plain jaw set

Accessories for 5-A two-in-one multi-clamp

Application:
The Flex Mov clamping jaw serves as a plain jaw for unrestricted positioning of Flex clamping pins, depending on the user's requirements. Positions that are not required are sealed by cover caps, so that there is no contamination from coolant and chips.

Execution:
- Accessories for 5-axis multi-clamp art. no.: 28759 701-704/710-713

Delivery:
1 set of Flex Mov clamping jaws without Flex clamping jaw

Type		Flex Mov for 5-A attachment 120/150 mm
Jaws width (mm)		150
Jaws length (mm)		90
Jaws height (mm)		30
28759...	Ident. No.	726 ○

120 mm design with a clamping width of 150 mm, without clamping jaws

ATORN 5-axis multi-clamp Flex clamping jaw

Accessories for Flex Mov plain jaw

Application:
Flex clamping jaw can be used freely in Flex Mov clamping jaw, depending on the application.

Execution:
- For use in Flex Mov clamping jaw
- Different versions available - smooth, with claws and carbide grip

Delivery:
1x Flex clamping jaw

ATORN Accessories for 5-A two-in-one multi-clamp

Spare parts

Application:
Ident. No. 811: This 5-axis design is offered as an accessory for operators already using a multiple clamping rail. The system, however, can only be used on a 120 series rail.
Ident. No. 812: The spindle extensions are required to extend the 5-axis multi clamp. Using this extension, each of these systems can be extended by up to 100 mm.
Ident. No. 813: The fixed base block is securely attached to the multiple clamping rail and forms the system's fixed jaw. The system can only be used on a 120 series rail.
Ident. No. 814: The clamping unit features a slide plate, which is securely attached to the multiple clamping rail. The base block is then pushed onto the fixed slide plate, allowing the clamping area to be adjusted using the spindle.
Ident. No. 815: Spare spindle package in case the spindle or spindle components become damaged.

Execution:
- **Ident. No. 811:** The set contains all components required for 5-axis machining
- **Ident. No. 811, 813–814:** Including adjustable clamps for pull-down mounting on the rail
- **Ident. No. 812:**
  - Spindle extension with through-bore
  - Serrated pin connection on one side
  - Serrated groove connection on one side
- **Ident. No. 813:** Fixed base block
- **Ident. No. 814:**
  - Movable base block
  - Slide plate
- **Ident. No. 815:**
  - Spindle retention plates
  - Brass sliding rings for good spindle mobility
  - Threaded spindle
  - Spindle extension

Delivery:
Ident. No. 811: 1x Complete 5-axis design, incl. fasteners
Ident. No. 812: 1x spindle extension
Ident. No. 813: 1x fixed base block, incl. fasteners
Ident. No. 814: 1x sliding base block, incl. guide rail
Ident. No. 815: 1x complete spindle, incl. retention plate

Notes:

Sliding blocks/fixed T-nuts

Accessories for 5-A two-in-one multi-clamp

Application:
The sliding blocks are used to directly mount the 5-axis multi-clamp or multiple clamping rails onto the machine table, without the need for adjustable clamps.

Execution:
- For mounting the 5-axis multi-clamp onto the machine table
- With M8 thread
- Short version

Delivery:
1x T-slot nut

Type		M8 sliding block	M12 sliding block	M12 sliding block

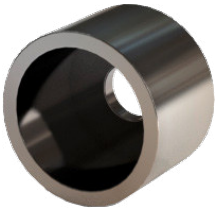
Screw bushing

Accessories for 5-A two-in-one multi-clamp

Application:
As the name suggests, the screw reducer is used to reduce the diameter of mounts.

Execution:
- For reducing from M16 to M12

Delivery:
1x screw bushing



Type		Screw bushing to adapt from M16 to M12
28759...	Ident. No.	822 ○

Prod. Gr. 2AZ

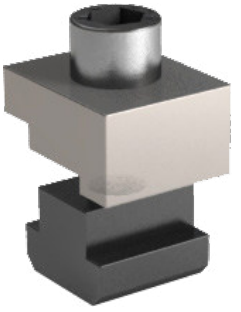
Adjustable clamps set

Accessories for 5-A two-in-one multi-clamp

Application:
The adjustable clamps are used to secure the 5-axis multi-clamp or multi-clamping rails on a T-groove table.

Execution:
- For mounting the 5-axis multi-clamp or multiple clamping rails onto the machine table
- 30 mm adjustable clamp
- M12 fastening screw
- Sliding block with groove size of 14 mm

Delivery:
1x adjustable clamp set (4 pieces) including sliding block and fastening screws



Type		Adjustable clamp set 30 mm for M12 screw	Adjustable clamp set 40 mm for M16 screw

5-axis centre clamping devices
The right companion for every application

We offer the following range of 5-axis centre clamps:
- Mechanical with power intensifier/mechanical without power intensifier
- with and without voltage amplifier
- Jaw widths of 50–160 mm
- Clamping widths of 0–269 mm
- Clamping force of 10–50 kN

We also offer a wide range of accessories:
- Screw-in jaws / screw-on jaws / etc.
- Quick change systems
- Stops
- Swing jaws / grip jaws
- Adjustable clamps

ATORN

"The Little One"
ATORN TCA 5-axis centre clamp with quick change system
Nos. 28761 001-002

ROHM

ATORN TCA 5-axis centre clamping devices K and M

Application:
Ideal for use on 5-axis machining centres Conventional clamping and grip clamping possible.

Version:
- Centric, simple programming without zero offset.
- Support height of the workpiece 192 mm.
- Jaw quick-change system, quick-action tool-free jaw replacement within 10 seconds per pair of jaws.
- Reversible jaws: for min./max. clamping widths with one pair of jaws.
- Constant clamping force via low-maintenance telescopic spindle.
- Fitted as standard with location holes for zero point clamping system gauge 200.
- Can also be mounted on a machine table using through bolts/shoulder screws in 50/63 mm grid or adjustable clamps.
- Integrated scale ring for fine adjustment of the centre position.
- Operation with torque wrench.

Advantage:
- Telescopic spindle, interference contour remains unchanged.
- Centric, simple programming without zero offset.
- Material dimensions are symmetrically distributed.
- Workpiece accessibility does not depend on clamping width.
- Symmetrical design = workpiece remains centred and parallel. Linear clamping force of 30 kN at 45 Nm.

Scope of delivery:
1x ATORN TCA without jaws, 1x support plate for transport, 1x L-shaped TX key, 1x hand crank for pre-setting (please order clamping jaws separately).

Note:
Torque wrench 20-120 Nm ref. no. 55240120, screwdriver bit AF 14 hex 1/2 ref. no. 58682140.

ATORN TC-coated movable stepped jaws

Accessories for ref. no. 28761001-002

Application:
For clamping parallel pre-processed workpieces.

Version:
- Material: Hardened steel.
- Jaw quick-change system, no more screwing.
- Jaws can be clamped in two positions.

Advantage:
- Clamping surfaces (steps) are also carbide-coated to ensure secure clamping - retention force increased by a min. factor of two compared with smooth clamping surfaces.

Scope of delivery:
1x TC-coated movable stepped jaw.

ATORN TC-coated movable grip jaw

Accessories for ref. no. 28761001-002

Application:
For ensuring excellent accessibility to the workpiece during 5-sided machining.

Version:
- For rectangular workpieces (saw cut) //≤ 0.5 mm.
- Minimal lost clamping edge of 3 mm.
- Mechanical interlock due to tips that penetrate the material without the need for preliminary shaping.
- Integrated row of grippers ensures a rigid design that protects against vibrations, especially in parts clamped upright.
- Additional clamping surfaces, ground on both sides.
- Suitable for a material strength of up to 1,000 N/mm².

Scope of delivery:
1x TC-coated movable grip jaw.

1. Maximum machining depth 15 mm

ATORN Zero jaw: 70 mm

Accessories for ref. no. 28761001-002

Version:
- Hardened steel.
- Case-hardened and tempered 720+50 HV10.

Advantage:
- For clamping parallel pre-processed workpieces.
- Cylindrical pins act as a contact surface; height can be set at 176 mm or 191 mm.
- Minimum clamping edge: 20 mm at a height of 176 mm/5 mm at a height of 191 mm.

Scope of delivery:
1x zero jaw, 4x parallel pins DIN EN ISO 8734.

Type		Zero jaw
Jaws width (mm)		70
Min./max. clamping width		0-69 mm

ATORN Carrier jaw: 120 mm

Accessories for ref. no. 28761001-002

Version:
- Hardened steel.
- Case-hardened and tempered 720+50 HV10.
- Square workpiece width min./max. 55-180 mm.
- Square workpiece width min./max. 55-180 mm.
- Round workpieces min./max. dia. 50-165 mm.
- Round workpieces min./max. dia. 64-225 mm.

Advantage:
- For clamping unmachined parts, bulky or round workpieces.
- Suitable for holding different types of gripper studs (pointed/smooth)

Scope of delivery:
1x support jaw.

Type		Carrier jaw
Jaws width (mm)		120
Min./max. clamping width		58-184 mm

ROHM Machine vice, centric clamping

Application:
Particularly suitable for use on conventional machine tools.

Execution:
- Manual mechanical clamping system without power booster.
- Centre clamping due to left-hand and right-hand spindle threads.
- Made of special cast iron for a wide range of applications.
- Can be used on graduated swivel plates.
- Hardened clamping jaws.

Advantage:
- Extensive range of jaws.
- Spindle covered in working area.
- Low-profile design.
- Lateral jaw guides for easy and accurate vice alignment.

Delivery:
1x UZ machine vice; including SGN standard jaws and hand crank

Notes:
For additional jaws, see no. 28882-28889. No. 28717 swivel plates available on request.

ROHM RKZ-M 5-axis machine centre clamping device

For 5-sided machining, centric clamping

Application:
For use on NC machines, particularly for 5-side machining.

Execution:
- Centre clamping with two movable jaws.
- Mechanical clamping system without power booster.
- Manually actuated.
- Steel base body is hardened and ground on all sides, can be clamped on 3 sides.
- Dimension G-0.02 mm.

Advantage:
- Compact design.
- Mid-clamp accuracy: ± 0.02 mm - Repeat clamping accuracy: 0.01 mm.
- Constant clamping force for each clamping operation and high repeatability when using a torque wrench.
- Large clamping range.

Delivery:
1x RKZ-M vice; including stepped jaws

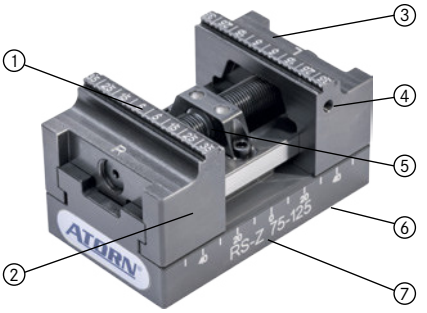
ATORN centre clamping device RS-Z
Designed for use in automation and process optimisation

The ATORN centre clamping devices set new standards in the field of workpiece clamping technology.
Due to their special external guide surfaces, the deep-seated spindle and the stable basic body, no distortion occurs during the clamping process. Pushing up the component is virtually impossible. The compact construction compared to the possible workpiece size offers ideal accessibility and therefore enables the use of short tools for reduced vibrations and improved cutting conditions.

Advantages:
- **Quick and simple operation**
- **Flexible in any application** - suitable for machine table, pallets or zero-point clamping systems
- **Jaw width 75 mm:** Clamping widths: 100/125/150/175 mm
- **Jaw width 125 mm:** Clamping widths: 150/200/250/300 mm
- **Always securely clamped** - Jaws with grip toothing and a clamping force of up to 30 kN
- **Rugged and durable** - maintenance-free construction of spindle, basic body and jaws

① Clamping jaws with grip toothing on both sides (same toothing for all clamps)
② Clamping jaws made of solid material for maximum stability during clamping
③ Connecting thread for the use of workpiece stops
④ The clamping jaws are turned in the shortest possible time in order to achieve a higher clamping range and eliminate interference contours
⑤ Spindle centring accuracy +/-0.02 mm
⑥ The base of the clamp has connecting threads for zero-point clamping bolts; the joint dimensions of the holes form the basic dimensions from some well-known manufacturers
⑦ Stable and rugged basic body made of case-hardened steel for high durability



ATORN RS-Z 75 centric clamping device
Basic body with spindle without jaws

Application:
For NC machines and machining centres; increases profitability through fewer tool changes and shorter run times per workpiece; suitable for use on pallet and with robot changing systems.

Execution:
- Robust steel basic body
- Functional surfaces hardened and polished
- Centre clamping through left-hand and right-hand spindle threads
- High repeat accuracy
- Easy to use

Advantage:
- Stable clamping for high cutting performance
- Prepared for ATORN ZPS K20 and Lang Quick Point 52; other adaptations for your machine table available on request

Delivery:
1x RS-Z centre clamping device basic body with spindle.

Notes:
Jaws not included in scope of delivery. These must be procured separately as accessories.

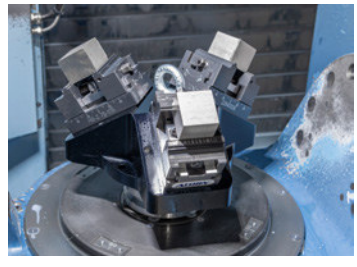
ATORN 3-way clamping pyramids

Eliminate downtime and boost productivity!
The basic principle is simple: One or, ideally, several workpieces can be clamped on each side of the pyramid. These workpieces are then immediately processed one after the other.
Whether without or with the help of modern CAD/CAM systems, the production of even the smallest batch sizes down to individual parts can be highly efficient and automated.
Ideally, the machine is set up outside the machine room at its own or external setup stations.
The machine is loaded with the clamping pyramid via the machine's own transfer systems. Alternatively, it can be loaded by crane or robot.
Unproductive downtimes, such as reclamping, alignment or determining the zero point, are therefore consistently becoming a thing of the past for machines using pyramids.

Economical!
- Multiple clamping on 5-axis machines = boosting productivity!
- Multiple clamping for fewer tool changes and longer spindle run times on 5-axis machines
- Increase machine runtimes and reduce downtimes
- The combination of swivel table with and without zero-point clamping system enables efficient production, even with the smallest batch sizes on 5-axis machining centres

Simple!
- Optimum accessibility even for short tools
- Adapted interference and cutting circle diameter
- Whether large batch, small batch or individual part production: all of this is no longer a problem thanks to the new ATORN 3-way pyramids
- Depending on the situation, the vices can also be rotated by 90° without hindering accessibility. We are talking about a multi-clamping system and benefiting from multi-sided machining.



The combination of swivel table, with and without zero-point clamping system, and clamping pyramid enables efficient production of even the smallest batch sizes on this 5-axis machine.

RS-P 310 3-way clamping pyramid, 123.5°

Includes RS-Z centric clamping device without jaws

Application:
For NC machines and machining centres; increases profitability through fewer tool changes and shorter run times per workpiece.

Execution:
- Centre clamping device with sturdy steel basic body, pyramid basic body made of high-strength aluminium
- Functional surfaces hardened and polished
- Centre clamping through left-hand and right-hand spindle threads
- High repeat accuracy
- Easy to use
- Reliable machining process with maximum stability thanks to tried and tested RS-Z centre clamping devices
- Optionally with ATORN integrated clamping module K20 (zero-point clamping system); on request

Advantage:
- Space-saving and compact, excellent accessibility for 5-axis machining
- Fewer tool changes due to multiple clamping
- Shorter runtimes due to optimisation of cycle times

Delivery:
1x basic body including 3x RS-Z centre clamping devices without jaws, includes packaging and transport

Notes:
Example:
Matsuura MAM 72-35V with 40-pallet memory: original load = 40 workpieces.
The RS20.3P-310 allows for the clamping and machining of 120 workpieces without the need for any operators.

Type	Jaws width (mm)	Base body Ø (mm)	Body height (mm)	Body length (mm)	Max. Ø (mm)	Max. length (mm)	Overall height (mm)	Min./max. clamping width	Tension force (kN)	Width across flats	28793... Ident. No.

RS-P 310 3-way clamping pyramid, 110°

Includes RS-Z centric clamping device without jaws

Application:
For NC machines and machining centres; increases profitability through fewer tool changes and shorter run times per workpiece.

Version:
- Centre clamping device with sturdy steel basic body, pyramid basic body made of high-strength aluminium.
- Hardened and ground functional surfaces.
- Centric clamping due to left-hand and right-hand spindle threads.
- High repeat accuracy.
- Easy to use.
- Reliable machining process with maximum stability due to tried and tested RS-Z centre clamping devices.
- Optional: with ATORN K20 integrated clamping module (zero-point clamping system), available on request.
- Basic body with 110° angle for machines with small swivel range.

Advantage:
- Space-saving and compact, excellent accessibility for 5-axis machining.
- Fewer tool changes due to multiple clamping.
- Shorter run times due to optimisation of cycle times.

Delivery:
1x basic body including 3x RS-Z centric clamping devices without jaws, includes packaging and transport.

Note:
Example:
Matsuura MAM 72-35V with 40-pallet memory: original load = 40 workpieces.
The RS20.3P-310 allows for the clamping and machining of 120 workpieces without the need for any operators.

RS-P 310 3-way clamping pyramid, 123.5°

Includes Easy Point system and RS-Z centric clamping device without jaws

Application:
For NC machines and machining centres; increases profitability through fewer tool changes and shorter run times per workpiece.

Execution:
- Centre clamping device with sturdy steel basic body, pyramid basic body made of high-strength aluminium
- The ATORN Easy Point zero point clamping system incorporated in the basic body provides maximum flexibility and ensures that the clamping equipment can be changed quickly
- Functional surfaces hardened and polished
- Centre clamping through left-hand and right-hand spindle threads
- High repeat accuracy
- Easy to use
- Reliable machining process with maximum stability thanks to tried-and-tested RS-Z centre clamping devices

Advantage:
- Space-saving and compact, excellent accessibility for 5-axis machining
- Fewer tool changes due to multiple clamping
- Shorter runtimes due to optimisation of cycle times
- Clamping equipment can be quickly changed using ATORN Easy Point

Delivery:
1x basic body including ATORN Easy Point module; 3x RS-Z centre clamping devices without jaws, includes packaging and transport

Notes:

ATORN clamping towers

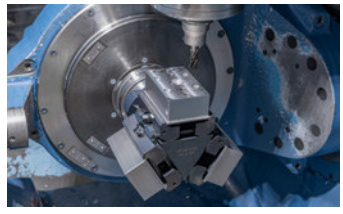
Turn unproductive nights into operator-less production time
With the ATORN clamping towers, we offer the right concept for every machine. The ATORN 20-way clamping tower can be converted from 4 to 20 components in just a few steps. For this purpose, only the centre clamping devices RS-Z are attached to the four sides of the basic body. A fully equipped tower can turn often-unused night-times into a productive third shift, avoiding the need for personnel to be on site. The more parts are clamped simultaneously, the longer the machine runtime. To further minimise the remaining downtimes, the clamping towers can be equipped outside the machine.

Extended total runtime increases machining efficiency
Furthermore, the clamping tower RS-T opens up interesting possibilities for machine operators, as the variable clamping options also allow individual programming. Due to the long total runtime of the machine, all the machining processes become more effective and give users more time for other tasks. Due to the large number of components machined in one clamping, the user benefits from an enormously high spindle runtime and very short chip-to-chip times.

Economical!
- Multiple clamping on 5-axis and horizontal machining centres = boosting productivity!
- Multiple clamping for fewer tool changes and longer spindle runtimes on 5-axis and horizontal machining centres
- Increase machine runtimes and reduce downtimes
- Using ATORN clamping towers in combination with central clamping devices RS-Z allows you to fully develop the complete performance of your machine
- High productivity thanks to significantly higher machine utilisation during an operator-less shift

Simple!
- Optimum accessibility even for short tools
- Adapted interference and cutting circle diameter of 350 mm
- Whether large batch, small batch or individual part production: All of this is no longer a problem thanks to the new ATORN clamping towers
- Prepared for zero-point clamping systems or direct clamping
- Whether programming directly at the machine or via a programming system, integrating the ATORN clamping towers is very simple in every way
- For clamping raw and finished parts

20-way clamping tower on horizontal machining centres



3-way clamping tower on 5-axis machine

ATORN RS-T 3-way clamping tower

For 3 and 5 axis machining

Application:
For NC machines and machining centres; increases profitability through fewer tool changes and shorter run times per workpiece.

Execution:
- Robust steel base body
- Functional surfaces hardened and polished
- Centre clamping through left-hand and right-hand spindle threads
- High repeat accuracy
- Easy to use
- Highly efficient, compact and space-saving
- Highly economical
- Maximum part size 100 x 100 mm x variable length for an interference circle of 350 mm

Advantage:
- Fewer tool changes due to multiple clamping
- High productivity thanks to significantly higher machine utilisation during an unmanned shift
- Prepared for ATORN ZPS K20 and Lang Quick Point 52
- Clamping jaws also suitable for embossing systems

Delivery:
1x 3-way RS-T clamping tower; does not include packaging and transport

Notes:
Other adaptations for your machine table available on request.

ATORN centric clamping device RS-Z

Jaws suitable for use on RS-Z clamping devices

Extensive range of jaws:

The RS-Z family of centric clamping devices offers an extensive range of jaws, but also the possibility of adapting the jaws for components and constructions with special shapes.

Jaws with grip toothing

Jaws with smooth clamping surface

Plain jaws for interchangeable jaws

Narrow jaws with grip toothing

Combination jaws with grip and smooth clamping surface

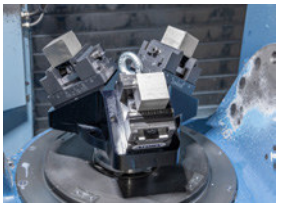
Interchangeable jaw grips in steel and aluminium version

Double-grip jaws with two rows of teeth

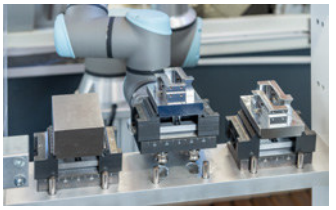
Application examples:

Use on multi-clamping tower

Use as single clamping device on machine table or zero-point clamping system



Use on pyramids



Use with robot handling

ATORN Standard clamping jaws “Grip” for centric clamping devices

Accessories for RS-Z and three-way clamping pyramid.

Application:
Standard clamping jaw for universal use according to requirements.

Execution:
- Standard clamping jaw with grip toothing
- Grip toothing for clamping unfinished parts
- Hardened and polished

Advantage:
- Reversible
- Easy and quick changing
- For clamping unfinished parts

Delivery:
1 set of standard clamping jaws (two pieces)

Notes:
Suitable for all RS-Z centric clamping devices and three-way clamping pyramids.

Jaw type	Type	Jaws width (mm)	Jaws thickness (mm)	Jaws height (mm)	Section, width (mm)	Section, height (mm)	Section, length (mm)	28795... Ident. No.

Prod. Gr. 2BA

ATORN Combination jaws for centric clamping devices

Accessories for RS-Z and 3-way clamping pyramid

Application:
Combination jaws for universal use according to requirements.

Execution:
- Upper step with grip toothing for clamping unmachined parts
- Lower step with smooth clamping surface for clamping finished parts
- Hardened and polished

Advantage:
- Combination jaws combine grip and smooth jaws
- Reversible
- Easy and quick changing
- For clamping unmachined and finished parts

Delivery:
1 set of combination jaws (two pieces)

Notes:
Suitable for all RS-Z centric clamping devices and three-way clamping pyramids.

Jaw type	Type	Jaws width (mm)	Jaws thickness (mm)	Jaws height (mm)	Section, width (mm)	Section, height (mm)	Section, length (mm)	28795... Ident. No.

Prod. Gr. 2BA

ATORN Standard clamping jaws, smooth, for centric clamping devices

Accessories for RS-Z and three-way clamping pyramid.

Application:
Standard clamping jaw for universal use according to requirements.

Execution:
- Standard clamping jaw smooth
- Smooth clamping surface for clamping finished parts
- Hardened and polished

Advantage:
- Reversible
- Easy and quick changing
- For clamping finished parts

Delivery:
1 set of standard clamping jaws (two pieces)

Notes:
Suitable for all RS-Z centric clamping devices and three-way clamping pyramids.

ATORN Slim clamping jaws for centric clamping devices

Accessories for RS-Z and 3-way clamping pyramid

Application:
Slim clamping jaw for universal use according to requirements.

Execution:
- Slim clamping jaws with grip toothing
- Grip toothing for clamping unfinished parts
- Hardened and polished

Advantage:
- Reversible
- Easy and quick changing
- For clamping unfinished parts

Delivery:
1 set of slim clamping jaws (two pieces)

Notes:
Suitable for all RS-Z centric clamping devices and three-way clamping pyramids.

ATORN Double-grip jaws

Accessories for RS-Z and 3-way clamping pyramid

Application:
Double-grip jaw with additional second row of teeth for better pressure distribution and increased retention force where it's needed.

Version:
- Clamping jaw with 2 rows of grip toothing.
- Grip toothing for clamping unmachined parts.
- Hardened and ground.

Advantage:
- Better distribution of clamping force.
- Higher component protrusions are possible during machining.

Delivery:
One set of double-grip jaws (two pieces).

Note:
Suitable for all RS-Z centric clamping devices and three-way clamping pyramids.

Jaw type	Type	Jaws width (mm)	Jaws thickness (mm)	Jaws height (mm)	Section, length (mm)	28795... Ident. No.

ATORN Plain jaws for centric clamping devices

Accessories for RS-Z and 3-way clamping pyramid

Application:
Plain jaw for universal use according to requirements.

Execution:
- Plain jaw for accommodating steel or aluminium soft interchangeable jaw grips
- Hardened and polished

Advantage:
- Reversible
- Easy and quick changing
- The use of soft top jaws allows for adaptation to suit any customer requirements
- For clamping unmachined and finished parts

Delivery:
1 set of plain jaws (two pieces)

Notes:
Suitable for all RS-Z centric clamping devices and three-way clamping pyramids.

ATORN Interchangeable jaw grips, steel

Accessories for RS-Z and 3-way clamping pyramid

Application:
Top jaw for universal use according to requirements.

Execution:
- Steel version
- Not hardened and polished
- Designed for the insertion of special designs

Advantage:
- For custom adaptation according to machining requirements
- Easy and quick changing

Delivery:
1 set of steel soft interchangeable jaw grips (two pieces)

Notes:
Suitable for all RS-Z centric clamping devices and three-way clamping pyramids.

Jaw type	Type	Jaws width (mm)	Jaws thickness (mm)	Jaws height (mm)	28795... Ident. No.

ATORN Multiple clamping rail sets with smooth jaws

incl. fixed jaws and wedge clamping device

Application:
The ATORN clamping rail can be used to clamp small, large, long and multiple components.

Version:
- Fixed jaws with smooth clamping flat.
- Wedge clamping device with smooth clamping flat.
- Extremely high rigidity.
- Clamping force up to 4 tonnes.
- Infinitely extendable.
- **Ref. no. 250, 450, 650, 850:** 50 mm clamping rail.
- **Ref. no. 350, 550, 750, 950:** 80 mm clamping rail.

Advantage:
- All module sizes fit on all clamping rails.
- Can be used with a range of systems.

Scope of delivery:
1x clamping rail with fixed jaws and wedge clamping device, without fastening material.

Note:
All wedge clamping devices and jaws of the ATORN clamping rails range can be used.

Prod. Gr. 2AZ

ATORN Multiple clamping rail sets with smooth jaws with allowance

incl. fixed jaws and wedge clamping device

Application:
The ATORN clamping rail can be used to clamp small, large, long and multiple components.

Version:
- Fixed jaw with smooth clamping flat with allowance.
- Wedge clamping device with smooth clamping flat with allowance.
- Extremely high rigidity.
- Clamping force up to 4 tonnes.
- Infinitely extendable.
- **Ref. no. 251, 451, 651, 851:** 50 mm clamping rail.
- **Ref. no. 351, 551, 751, 951-956:** 80 mm clamping rail.

Advantage:
- All module sizes fit on all clamping rails.
- Can be used with a range of systems.

Scope of delivery:
1x clamping rail with fixed jaws and wedge clamping device, without fastening material.

Note:
All wedge clamping devices and jaws of the ATORN clamping rails range can be used.

ATORN Multiple clamping rail sets with smooth jaws with claws

incl. fixed jaws and wedge clamping device

Application:
The ATORN clamping rail can be used to clamp small, large, long and multiple components.

Version:
- Fixed jaw with stepped clamping flat and claws.
- Wedge clamping device with stepped clamping flat and claws.
- Extremely high rigidity.
- Clamping force up to 4 tonnes.
- Infinitely extendable.

ATORN Fixed jaws incl. slot nut and screw

Accessories for multiple clamping rails

Application:
For screwing directly onto multiple clamping rails. The fixed jaw forms a fixed stop for all types of components. For pre-milled, precision-sawn or ground parts.

Version:
- Attached using 14 mm T-slot nut with M12 thread.
- **Ref. no. 310-318:** Smooth fixed jaws.
- **Ref. no. 319-327:** Grooved fixed jaws.
- **Ref. no. 328-336:** Fixed jaws with claws and step.
- **Ref. no. 081-089:** Fixed jaw with claws.
- **Ref. no. 231-239:** Fixed jaw with 2x carbide gripper inserts.

Scope of delivery:
1x fixed jaw incl. slot nut and screw.

ATORN Fixed jaw for 5-axis version incl. slot nut and screw

Accessories for multiple clamping rails

Application:
For screwing directly onto multiple clamping rails. The fixed jaw forms a fixed stop for all types of components. For pre-milled, precision-sawn or ground parts.

Version:
- Attached using 14 mm T-slot nut with M12 thread.
- **No. 28890 601-603:** Smooth version.
- **No. 28890 604-606:** Version with claws.

Advantage:
- Fixed jaw bevelled for better accessibility.

Scope of delivery:
1x fixed jaw for 5-axis version incl. slot nut and screw.

ATORN Wedge clamping device incl. slot nut and screw

Accessories for multiple clamping rails

Application:
For screwing directly onto multiple clamping rails. Use one clamping screw to clamp two components simultaneously. All modules can be combined with all rails.

Version:
- **No. 28891 337-345:** Smooth version.
- **No. 28891 346-354:** Grooved version.
- **No. 28891 355-363:** Version with allowance. With 4 mm allowance on each side. Prepared for accommodating special designs.
- **No. 28891 364-372:** Version with claws and 2 mm step.

Advantage:
- The wedge clamping device can be positioned freely on any type of multiple clamping rail.
- All module sizes fit on all clamping rail widths.

Scope of delivery:
1x wedge clamping device incl. slot nut and screw

Prod. Gr. 2AZ

ATORN Wedge clamping device with fixed jaw incl. slot nut and screw

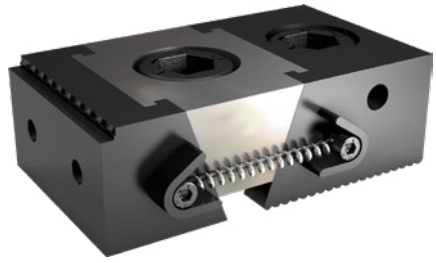
Accessories for multiple clamping rails

Application:
For screwing directly onto multiple clamping rails. Use a clamping screw to clamp two components simultaneously. All modules can be combined with all rails.

Execution:
- Easy clamping with fixed jaw. The zero points are therefore always clearly defined on the fixed jaw

Advantage:
- Wedge clamping device and fixed jaw combined in one
- No need for two components

Delivery:
1x wedge clamping device with fixed jaw



Ident. No. 414–416, 420–422

ATORN Adjustable clamp set, 4 pieces

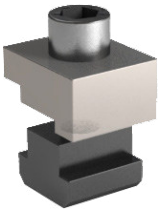
Accessories for multiple clamping rails

Application:
The adjustable clamps are used to mount the 5-axis multi-clamp or multiple clamping rails onto a T-slot nut table.

Version:
- For mounting the 5-axis multi-clamp or multiple clamping rails onto the machine table.

- Adjustable clamp 40 mm.
- Fastening screw M16.
- Slot nut with groove measurement of 18 mm.

Scope of delivery:
1 adjustable clamp set, including slot nut and fastening screws.



Type		Adjustable clamp set 30 mm for M12 screw	Adjustable clamp set 40 mm for M16 screw
Slot nut width (mm)		14	18

ATORN Clamping jaw with positioning pins, pneumatic operation

Application:
Clamping jaw system with positioning pins render laborious and time-consuming clamping devices superfluous, a practical, fast and simple way to lock the position of workpieces in a matter of seconds.

Execution:
- Fast and precise clamping of a wide range of workpieces

- Changeover in seconds for various machining operations
- Loose surfaces become superfluous, as does time-consuming cleaning
- Stable and robust construction, also suitable for high clamping forces
- Compressed air application via valves on each face
- Closed on all sides when installed, therefore low-maintenance

- Recommended air pressure: 5.5 bar
- High-quality tool steel, hardened, polished and treated with a special oxidation process

Advantage:
- One press of the blow-out gun and all pins are driven out

Delivery:
1 clamping jaw with positioning pins, can be actuated pneumatically

ATORN Covers

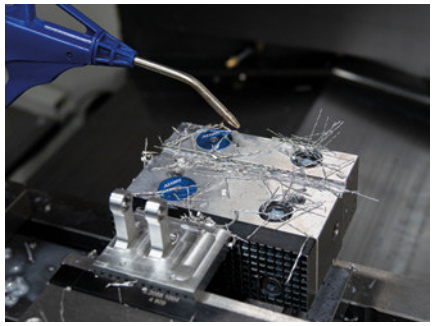
For bore holes and screw heads with hexagon socket

Application:
This patented system protects hexagon socket screws, drill holes and counterbores against contamination.

Version:
- For holes and widths across flats from dia. 8 mm
- Patented reusable system
- Suitable for all clamping systems featured in the catalogue
- Made from EN-AW-6082 (AlMgSi1), 1.4305 (X8CrNiS18-9) and NBR (natural rubber)

Advantage:
- Prevents swarf accumulation in the screw head and countersink bore
- Prevents the accumulation of cooling lubricants in the screw head and countersink
- Minimises the risk of cuts
- Minimises the risk of eye injury when working with compressed air
- Increases process reliability during setup

Delivery:
1 packing unit depending on size



Type		M10	M12	M16	M20

ATORN Workpiece stop

Adjustable in five axes

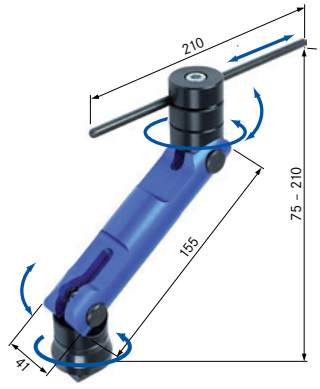
Application:
For use on drilling and milling machines.

Execution:
- Flexible and sturdy and quick to adjust
- For T-shaped sliding blocks with M8 thread

Delivery:
1 work piece stop; with T-sliding blocks 12 and 14 mm

Type		Universal stop
Width (mm)		41
Length (mm)		155
Bolt length (mm)		210
26111...	Ident. No.	020 ●

Prod. Gr. 281



Stop with probe system

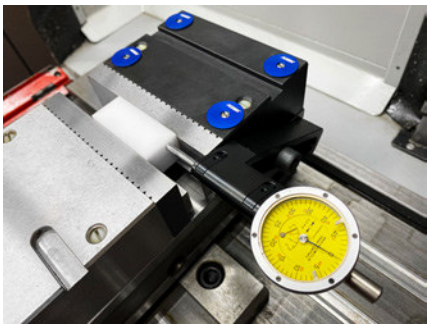
Workpiece stop and position check in one system

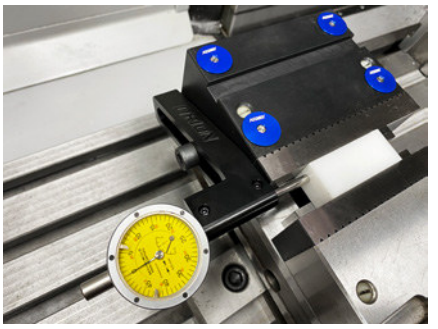
Version:
- Check repeat accuracy when clamping workpieces using a dial gauge/precision pointer
- Immediate detection of warping in the clamping process and during machining
- Fixed system prevents the stop from sliding
- Pre-defined extensions for flexible workpiece positioning, see accessory “Extension with tracer pin” (article number 26120001-004)

Advantage:
- Compatible with common dial gauges thanks to 8 mm location hole
- Compatible with many clamping devices thanks to attachment via 12x80 mm slotted hole
- For universal use in production and inspection
- Extensions/tracer pins and dial gauges are simple to replace and secure thanks to a positive-locking clamp

Delivery:
1 x stop and extension with tracer pin (25 mm usable length), w/o dial gauge/measuring equipment

Note:
Recommended dial gauge/measuring equipment, art. no.: 33051010 (IP67)





Width (mm)		24

Standard

Locating key

Application:

Fixed sliding blocks are screwed into the standardised 20 mm wide aligning groove of vices or jigs in pairs. The ability to replace the sliding blocks means that it is possible to work on machines with different groove widths.

Execution:

- Ground precisely around circumference
- C 15 case-hardened
- short alignment times

Notes:

Screws are not supplied. Other sizes and flat sliding blocks on request.

Magnetic parallel rest sets

Application:

For shimming workpieces. Can be attached to the screw-in jaws of vices.

Execution:

- Height tolerance ± 0.01
- Rest pairs made of hardened tool steel with approx. 62 HRC
- Black-oxide surfaces
- Precision-ground

Advantage:

- Magnetic parallel rests for short setup times
- Width 2.5 mm, making it possible to drill close to the vice jaws

Delivery:

5x pairs of rests in plastic case

Notes:

Individual parallel rests are also available upon request.

Parallel support pairs (DIN 7168)

Case-hardened steel, finely ground in pairs and true-to-angle

Application:
For parallel support of workpieces in machine vices, marking-off plates or machine tools during drilling, grinding, milling, planing, marking off and measuring; particularly suitable for supporting in machine vices, marking-off plates or machine tools.

Execution:
- Steel.
- In pairs, tolerance IT 5, nominal dimensions in accordance with DIN ISO 2768-1, tolerance class M.
- Case-hardened, finely polished in pairs and true-to-angle.

Delivery:
1x pair of parallel rests

Notes:
Numerous aligned pairs are available on request.

Prod. Gr. 264

Parallel rests sets (DIN 7168)

Corrugated

Execution:
- In pairs, tolerance IT 5, nominal dimensions to DIN ISO 2768-1, tolerance group m.
- Hardened and tempered spring steel.
- Precision-ground.
- Parallelism height tolerance +/- 0.004 mm.

Advantage:
- No swarf.
- Parallelism of clamped workpiece is not impaired.
- Several flat or single thin workpieces can be clamped easily.

Delivery:
1 set of 8 pairs in wooden box.

Parallel rest length (mm)		110	110

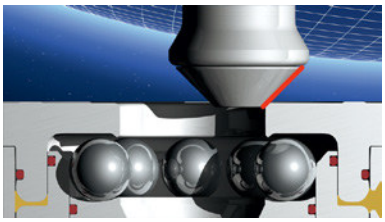
Prod. Gr. 260

ATORN zero-point clamping system
Convincing advantages in application, technology and maintenance

Large clutch movement

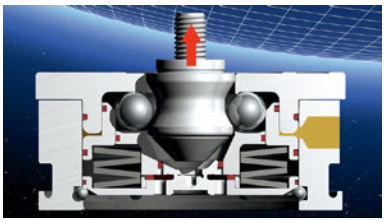


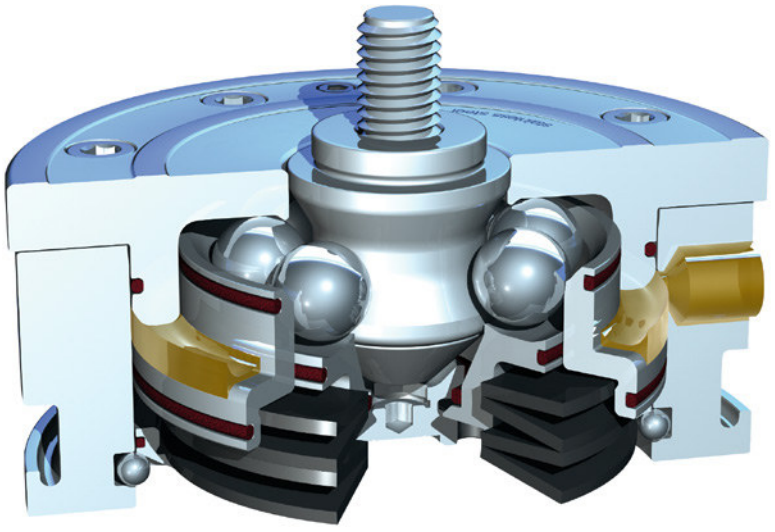
For feeding a pallet into the clamping module, a pre-positioning of 6.5 mm is sufficient.

No canting

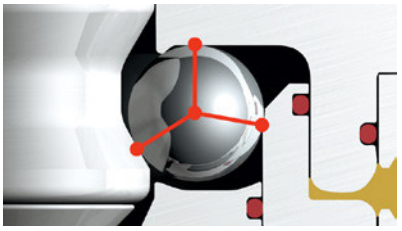
Cant-free retracting and extending through the optimal contour of the clamping nipple

Large hold, feed and locking forces



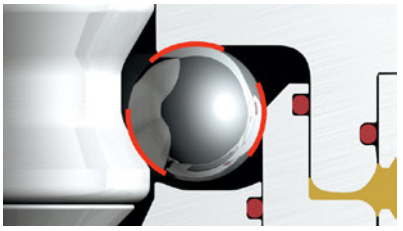


Three-stroke principle



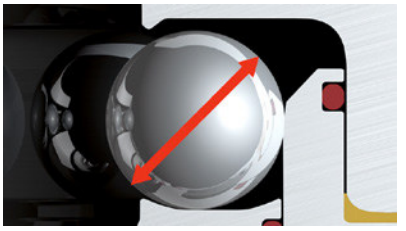
The force is distributed via a three-stroke principle. As a result, there are no shear loads of the balls.

Positive locking



The balls are positively enclosed on 3 sides. The forces evenly impact the balls and are optimally distributed.

Large ball diameter

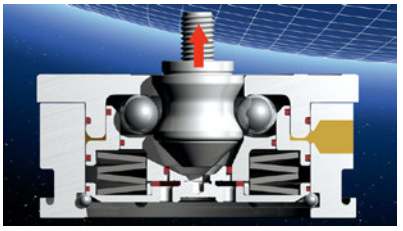


Better force distribution due to larger ball diameters.

No ball cage

The balls are exposed in the ball channel and always reposition themselves. Since the balls do not lie in a cage, dirt can easily be blown out with air.

Safety system



The system is absolutely process-safe. The clamping module can always be opened.

Stainless – stable – practicable

High-alloy, hardened tool steel – therefore no corrosion. Sturdy, suitable for industrial use and durable.

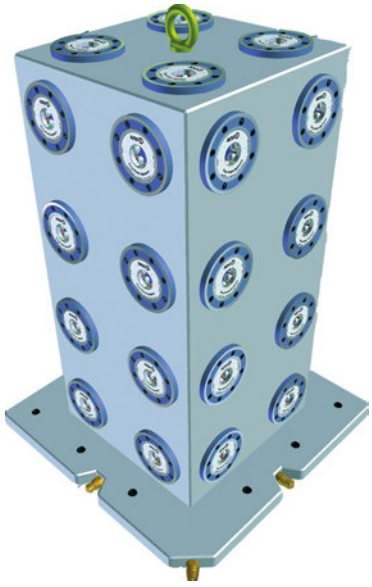
Questionnaire for the request: www.hahn-kolb.de - download centre: “Zero-point clamping system”

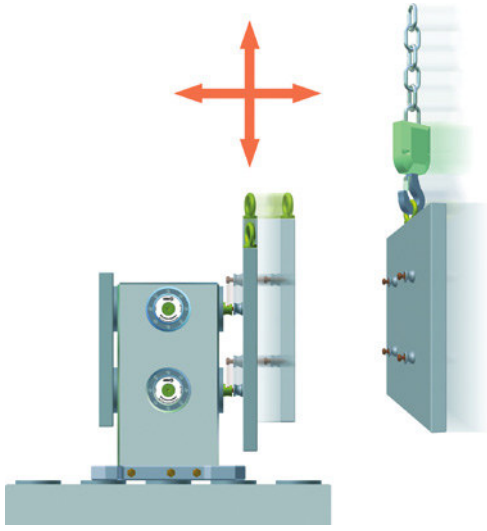
ATORN zero-point clamping system
Technology that inspires

Experience the benefits of the ATORN® zero-point clamping system, which presents its strengths in use through innovative and trendsetting features in a progressive manner.

Benefits that make the ATORN® zero-point clamping system unrivalled:

- **Use of different clamping nipples for highest positioning accuracy:**
  - Zero-point nipple: positioned at the absolute zero reference point
  - Strut nipple: secures the free axis
  - Undersize nipple: only for clamping and holding function
- **Two options for the different zero point definitions**
  - Classic: The zero point is defined by the zero point nipple in combination with the strut nipple
  - In case of temperature influence: The zero point is defined via the centre axis by the exclusive use of strut nipples
- **Maintenance-free system**
  - Fully sealed system made of hardened stainless steel for maintenance-free operation
- **Benefits in use**
  - Simple handling due to the large catch feed and the non-jamming loading and unloading option
- **Process reliability through technical advancement**
  - The “three-stroke principle, form closure and large ball diameter” features support process reliability. Due to these characteristics, the force is optimally distributed and does not lose any effect





Process	Without zero-point clamping system	With ATORN® zero-point clamping system
Machine costs	EUR 80/h	EUR 80/h
Number of set-up processes per day	3x	3x
Set-up time per process	60 min.	1.5 min.
Set-up time per day	180 min. (3 hrs)	4.5 min. (0.075 hrs)
Set-up costs per day	EUR 240	EUR 6
Annual set-up costs on the basis of 240 working days	EUR 57,600	EUR 1,440
Annual savings		EUR 56,160

ATORN mounting clamping module K10.2 and K20

Application:
Zero-point clamping system for set-up-time-optimised clamping with chipping and chipless machining in all areas, such as in the food, pharmaceuticals and chemicals industry.

Execution:
- Hydraulic unlocking
- Lid and piston hardened
- Repeat accuracy < 0.005 mm

Delivery:
1x clamping module

Notes:
The built-in clamping modules have high retention, feeding and locking forces with very small installation dimensions. hydraulic pressure is only required for loosening (min. 50 bar/max. 60 bar). The modules are mechanically locked in a clamped state. The advantage here is no disturbing lines and no risk of leakage. Available on request: - Installation sketches - Automation solutions - Also available as individual flange version

ATORN Multiple clamping stations K10.2

Execution:
- Hydraulic unlocking
- Repeat accuracy < 0.005 mm
- Unhardened steel
- The clamping systems are already equipped with mounting holes (for the most common table slot sizes 63, 100 and 125 mm) and positioning aids. The clamping stations are ready for immediate commissioning. Connections are already bolted
- The clamping station with blow-out features two connections: 1x hydraulic opening, 1x pneumatic purge
- the clamping stations are suitable for table slot sizes of 63, 100 and 125 mm

Advantage:
- Low overall height of only 36 mm

Delivery:
1x K10.2 clamping station

Notes:
Mounting sketches, other sizes as well as clamping stations especially tailored to your machine deliverable on request.

ATORN Replacement pallets for K10.2 and K20

Execution:
- High-strength aluminium, with plane parallelism of 0.05 mm
- Mounting holes for carry handles on the front faces of the interchangeable pallets
- Location holes for clamping bolts pre-drilled into the plate
- All edges with chamfer 0.5 mm x 45°
- Pitch of clamping bolts = 200.0 mm

Advantage:
- Clamping devices can be easily and effortlessly replaced with the aid of an interchangeable plate
- Clamping devices are secured to the interchangeable plate with clamping bolts and positioning pins

Delivery:
1x interchangeable plate, incl. standard clamping bolt equipment

Notes:
On request, mounting holes can be included in the replacement pallet according to your specifications. Other dimensions, actual dimensions as well as the number of clamping nipple equipment available on request.

ATORN clamping nipple

Hardened, for hydraulic clamping modules

Application:
The correct arrangement of the clamping bolts ensures that the replacement pallet is always optimally positioned. The zero point clamping bolt at the same time always serves as the reference point. The strut clamping bolt acts as a balance to the free axis. The undersize clamping bolt only has a clamping and holding function.

Delivery:
1x clamping bolt without locking screw

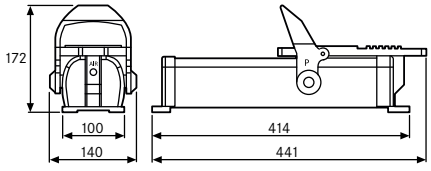
ATORN air hydraulic pump

Application:
The air-hydraulic pump is used for opening hydraulic clamping modules or hydraulic clamping stations.

Execution:
- Compact, compressed air operated hydraulic pump for single-acting circuits. The pump is equipped with a built-in safety valve which controls the hydraulic output pressure. the factory default setting of the safety valve is max. operating pressure of 60 bar. through the expansion body in the oil tank, the pump can be used horizontally and vertically. connecting thread air: G1/4 connecting thread oil: G1/4

Delivery:
1x air-hydraulic pump without connection material

Notes:
We recommend the use of clean and lubricated compressed air to operate the pump.



Type		Air hydraulic pump
Width (mm)		140.0
Height (mm)		172.0
Length (mm)		441.0
Min./max. air pressure		4-6 bar

ATORN Attachment set

Application:
For the connection between the hydraulic air pump and clamping station.

Execution:
- This set is used for the hydraulic connection of assembly clamping modules or clamping stations to the pressure generator such as pressure intensifier or air hydraulic pump.

Delivery:
The connection set includes: 1x hydraulic connection hose, length 2 m; 2x straight pipe fitting, 2x straight screw-in connection piece;1x T-fitting, 1x manometer 0-100 bar; 1x straight socket end fitting, 2x quick-action coupling sleeve; 2x quick-action coupling plug, 2x Cu sealing ring for G1/4

Notes:
Max. operating pressure: 100 bar

HAHN+KOLB calibration service

We calibrate and recalibrate your measuring instruments for you so that you can work reliably and all instruments meet the legal requirements and standards. We offer a calibration service in cooperation with our independently accredited partner Melutec Metrology GmbH. Make use of our service when purchasing new measuring and test equipment as well as for the periodic recalibration of all of your measuring and test equipment.

MELUTEC
calibration & services

CALIBRATION LABORATORY
Melutec Metrology GmbH
Helmholtzstraße 11
D-71573 Allmersbach im Tal, Germany

Large laboratory with 48 employees and over 30 years of experience

Short lead times for new equipment and recalibrations

On-site calibration

Advantages:

- Complies with the requirements of the quality system
- Safety for employees and customers
- Maintains product quality
- Reduces costs
- Conserves resources

Order service procedure:

Order calibration service for existing measuring equipment. Without pressure from the manufacturer.

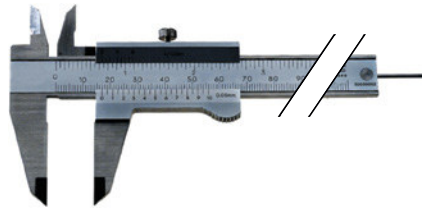
Request the appropriate shipping box from us
Tel. +49 7141 498-5377
Email: rekalibrierung@hahn-kolb.de

Easy shipping, either by pick-up or GLS return order
Include the calibration order for quick and easy assignment and processing.

Always calibrated in accordance with applicable standards
Our partner MELUTEC recalibrates your measuring and test equipment to the highest quality standards and sends it back to you, securely packed in special boxes.

Calibration certificates
You will receive the calibration certificate for each article. We will save the PDF for you for ten years. The digital calibration certificate
is available to you anytime, anywhere.

ATORN Pocket vernier callipers (ISO 13385-1)



Ident. No. 006–011, 020

Application:
For measuring external, internal, step and depth dimensions.

Execution:
- Scale and vernier scale with anti-glare, brushed chromium-plated finish
- Measuring and guiding surfaces hardened

Delivery:
In a case

Plastic dial callipers
Normal and ESD version

A

NEW

Application:
Ident. No. 030: For measuring external, internal, step and depth dimensions.
Ident. No. 040: For measuring external, internal, step and depth dimensions. For all work on components at risk of electrostatic discharge.

Execution:
- Dial gauge, diameter 35 mm, shockproof
- The round scale can be adjusted to zero, therefore enabling comparison measurements
- **Ident. No. 030:** Non-metallic high-tech material with 50 % fibreglass content
- **Ident. No. 040:**
  - Non-metallic high-tech material with 60 % fibreglass content
  - Surface resistance 10⁶-10⁹ ohms. Callipers made of electrostatic dissipating material

Technical data:
- Min./max. length measuring range: 0-150 mm
- Scale value: 0.01 mm
- Measurement travel of one pointer revolution: 10 mm
- Length of jaw: 40 mm
- Fine adjustment: No
- Depth gauge rod: Flat

IP degrees of protection in accordance with DIN EN 60529

Degrees of protection against dust	
IP	**1st number**
0	Not protected
1	Protected against solid foreign bodies 50 mm in diameter and larger
2	Protected against solid foreign bodies 12.5 mm in diameter and larger
3	Protected against solid foreign bodies 2.5 mm in diameter and larger
4	Protected against solid foreign bodies 1.0 mm in diameter and larger
5	Dust-protected
6	Dustproof

Degrees of protection against water	
IP	**2nd number**
0	Not protected
1	Protected against dripping water
2	Protected against dripping water where housing is inclined at angle of up to 15°
3	Protected against spray
4	Protected against splash water
5	Protected against hose water
6	Protected against heavy jets of hose water
7	Protected against impact of temporary submersion in water
8	Protected against impact of continual submersion in water

ATORN Electronic pocket callipers IP40 (ISO 13385-1)

with data output

IP 40 | multiCOM | A

Application:
For measuring external, internal, step and depth dimensions.

Execution:
- ON/OFF
- Zero setting at any position
- ABS function
- High-contrast display
- **Ident. No. 104–105:**
  - mm/inch changeover
  - AUTO OFF
  - Keeptronic system
- **Ident. No. 112–301:**
  - mm/inch switch-over
  - Auto off
  - Keeptronic System

Advantage:
- **Ident. No. 104–105:**
  - key lock to prevent unintentional adjustment
  - Switched on using the ON button or automatically switched on by calliper movement
  - Simple and reliable measurement reading thanks to large and high-contrast display
- **Ident. No. 112–301:**
  - Key lock to prevent unintentional adjustment
  - Switched on by the ON button or automatically switched on by calliper movement

Delivery:
Ident. No. 104–105: In a case, with battery (1 x 3 V lithium, type CR 2032)
Ident. No. 112–301: In a case, with battery (1 x 3 V lithium type CR 2032)

Technical data:
- Digit increment: 0.01 mm
- Functions: On/Off | Automatic switch-on (movement of the slide/measuring bolt) | With zero setting at any position | With mm / inch switching | Lock-function (Keybord lock)
- IP protection class: IP 40

Mitutoyo Electronic pocket callipers IP40 (ISO 13385-1)

with ABS AOS

Application:

For measuring external, internal, step and depth dimensions.

Execution:

- ON/OFF
- Zero setting at any position
- ORIGIN
- Digimatic
- ABSOLUTE system for reliable measurement
- High-contrast display

Advantage:

- AOS (advanced on-site sensor) magnetic-inductive scale
- No influence on the measurement due to contamination of the scale (dust, oil, water etc.).
- Smooth and stable guide surfaces

Delivery:

Delivered in box

Technical data:

- Digit increment: 0.01 mm
- Design of measuring contact: Steel
- Functions: ABS function | Absolute function | Origin (Dimension preset) | On/Off
- IP protection class

ORION® Workshop vernier callipers (ISO 13385-1)
in Leichtbauweise mit Messerspitzen

A

Application:
For measuring external and internal dimensions.

Execution:
- Flat vernier scale with parallax-free reading
- Very good contrast - white scale on black surface
- Measuring arms made of finely polished, hardened stainless steel

Advantage:
- Internal double vee-block guide for optimum guidance and slide properties
- Low weight for easier handling
- Easier reading with reduced light reflections due to black surface
- Threaded core hole table on the back

Delivery:
In a plastic case

Notes:
Made in Germany

ORION Electronic workshop vernier callipers (ISO 13385-1)

IP 40 | A

Application:
For measuring external and internal dimensions.

Execution:
- ON/OFF

- Zero setting at any position
- mm/inch switch-over

Delivery:
In a case, with battery (1 x 3 V lithium type CR 2032)

					Type of locating	With locking screw	
					Fine adjustment	No	
					Measuring tips	Yes

ATORN Electronic internal groove vernier callipers

multiCOM | IP 40 | A

Application:
For measuring internal recesses.

Execution:
- ON/OFF
- Zero setting at any position
- mm/inch switch-over
- Auto off
- Preset function

- ABS function
- Keeptronic System

Advantage:
- Key lock to prevent unintentional adjustment
- Switch on by moving the slider

Delivery:
in a wooden case, with battery (1 x 3 V lithium, type CR 2032)

Ident. No. 312

ATORN Electronic universal vernier calipers set IP67

With interchangeable gauge slides M2.5

multiCOM IP 67 A

Application:
For measuring various internal and external dimensions.

Execution:
- ON/OFF
- Zero setting at any position
- mm/inch changeover
- AUTO OFF
- Preset function
- ABS function

Advantage:
- Button locking prevents inadvertent adjustments
- Switched on by moving the slider
- Suitable for a wide range of measuring applications due to exchangeable M2.5 gauge slides

Delivery:
in a wooden case, with 2 pairs of gauge slides (ball Ø 5 mm, end face Ø 4.8 mm) setting dimension, with battery (1 x 3 V lithium, type CR 2032)

p. 1261

ATORN Electronic universal workshop callipers set IP65

With interchangeable gauge slides M2.5

multiCOM IP 65 A

Application:
For measuring various internal and external dimensions.

Execution:
- ON/OFF
- Zero setting at any position
- mm/inch switch-over
- Auto off
- Preset function
- ABS function
- Keeptronic System
- HOLD function
- Suitable gauge slides no. 33149 ref. no. 150/140/100/180

Advantage:
- Key lock to prevent unintentional adjustment
- Switch on by moving the slider

Delivery:
With pairs of gauge slides in wooden case, with battery (1 x 3 V lithium, type CR 2032)

Ident. No. 130

ORION® Electronic depth calliper (ISO 13385-2)

Lightweight design incl. 3 measuring bridges

IP 40 B

Application:
For measuring, e. g. hole depths, distances on workpieces etc.

Execution:
- Interchangeable depth gauge bases
- Measuring tip can be screwed into 90° offset mounts

Advantage:
- Internal double vee-block guide for optimum guidance and slide properties
- Replaceable blade tips M2.5

Delivery:
in case, spherical indicator contact point, depth gauge bases 150/300/450 mm, battery (1x type SR 44, 1.55 V)

Technical data:
- Digit increment: 0.01 mm
- Bridge length x bridge width: 150 x 13 mm
- IP protection class: IP 40
- Functions: With mm / inch switching | With zero setting at any position | On/Off

ORION® Electronic depth calliper (ISO 13385-2)

with sliding additional depth gauge bases

IP 40 | B

Application:
For measuring, e. g. hole depths, distances on workpieces etc.

Execution:
- Adjustable additional depth gauge base
- Additional depth gauge base self-locking in the desired position
- With interchangeable disc and spherical indicator contact point

Advantage:
- Internal double vee-block guide for optimum guidance and slide properties
- Replaceable blade tips M2.5

Delivery:
in case, spherical/disc indicator contact points, additional depth gauge base 350 mm, battery (1x type SR 44, 1.55 V)

Technical data:
- Digit increment: 0.01 mm
- Bridge length x bridge width: 150 x 16 mm
- IP protection class: IP 40
- Functions: With mm / inch switching | With zero setting at any position | On/Off

ATORN Small electronic depth calliper, IP67 (ISO 13385-2)

IP 67 | multiCOM

p. 1261

Application:
For measuring depths in small boreholes and at cramped measuring points, e.g tread pattern.

Execution:
- ON/OFF
- Zero setting at any position
- mm/inch switch-over
- Auto off
- ABS function
- Keeptronic System
- Preset function
- Overall length 122.5 mm

Advantage:
- Key lock to prevent unintentional adjustment
- Switched on by moving the slider

Delivery:
in a wooden case, with battery (1 x 3 V lithium, type CR 2032)

Technical data:
- Min./max. length measuring range: 0-25 mm
- Digit increment: 0.01 mm
- Bridge length x bridge width: 48 x 8 mm
- IP protection class: IP 67
- Depth gauge rod width: 2 mm

ATORN Measuring instrument sets
in dense foam insert in wooden case

Application:
Measuring instrument sets with different combinations of contents

Execution:
- Premium wooden box in German joiner quality
- Dense foam insert with recesses in the box base, recessed by 1 mm
- Dense foam insert recessed into the cover by 1 mm

Advantage:
- The most useful measuring instruments, combined in one set
- High-quality dense foam for shock-proof storage

Delivery:
in accordance with the contents of the set

ATORN Empty wooden box
for 1/3 size dense foam inserts

Application:
Empty wooden box for storing small objects and hard foam inserts

Execution:
- Suitable for standard 1/3 hard foam inserts
- Solid beech frame
- Birch veneer bottom panel and cover
- Brass-plated hinges and fasteners
- Box exterior with natural-coloured paint finish, interior and bottom panel not painted

Advantage:
- Can be combined with standard 1/3 hard foam inserts
- Empty box as a starting point for individual configurations
- High-quality design, German carpenter quality

Notes:
Interior height of 41 mm is divided into interior-bottom panel height of 31 mm and interior-cover height of 11 mm

ATORN Outside micrometer non-rotating spindle (DIN 863)

D

HIGHLIGHT

Application:
For measurements on scratch-prone measuring points. Also suitable for mounting adapters, e.g. thread measurement wires.

Execution:
- Anti-glare, matt chrome-plated finish on reading elements
- Tungsten carbide measuring surfaces
- Friction coupling for consistently repeatable measuring force of 5-10 N
- With spindle clamp
- Handle prevents transfer of heat from the hands
- Non-rotating measuring spindle

Advantage:
- Extremely stable frame. Bending deflection superior to the requirements of DIN 863.
- Very high-contrast and durable scale, sharply recessed and black

Delivery:
Supplied in a high-quality wooden case

Min./max. length measuring range		0-25 mm	25-50 mm	50-75 mm	75-100 mm

Prod. Gr. 316

ORION® Electronic micrometer (DIN 863)

IP 40

Application:
For measuring e. g. shaft diameters, external dimensions on workpieces etc.

Execution:
- Carbide measuring faces
- Advanced friction coupling for consistent, repeatable measuring force
- ON/OFF
- Zero setting at any position
- mm/inch switch-over

Delivery:
In a case, with battery (1 x type SR 44, 1.55 V), 1 setting gauge from size 25–50 mm

Technical data:
- Digit increment: 0.001 mm
- Measuring surface diameter: 6.5 mm
- Measuring spindle increments: 0.5 mm

Min./max. length measuring range		0-25 mm	25-50 mm	50-75 mm	75-100 mm
31406...	Ident. No.	005 ●	025 ●	050 ●	075 ●

Prod. Gr. 3BJ

ORION® Electronic micrometer set (DIN 863)

0-100 mm

IP 40

Technical data:
- Min./max. length measuring range: 0-100 mm
- Digit increment: 0.001 mm
- Number of bracket measuring screws: 4
- Measuring surface diameter: 6.5 mm
- Measuring spindle increments: 0.5 mm

31406...	Ident. No.	400 ●

Prod. Gr. 3BJ

TESA TECHNOLOGY Electronic micrometer (DIN 863)

MICROMASTER IP54

IP 40 | Opto RS 232 | IP 54

No. 31407

p. 1262

Application:
For measuring e. g. shaft diameters, external dimensions on workpieces etc.

Execution:
- advanced friction clutch for consistent, repeatable measuring force
- Display blocking function (excluding Easy model)

Delivery:
In a case, with battery (1 x 3 V lithium, type CR 2032)

Technical data:
- Digit increment: 0.001 mm
- Measuring surface diameter: 6.5 mm
- Measuring spindle increments: 0.5 mm
- Functions: Spindle clamping | With zero setting at any position | With mm / inch switching | Automatic switch-off | ABS function | Preset function
- Material of measuring bolt: Carbide

Prod. Gr. 362

Mahr Electronic micrometers without data output

Micromar 40 ER/EWR

IP 40

Application:
for measuring e.g. shaft diameters, external dimensions of workpieces etc.

Execution:
- carbide-tipped measuring faces
- RESET (resetting the display)
- ABS (display can be set to zero without losing the reference to the ORIGIN)
- mm/inch changeover
- LOCK function (keypad lock)
- HOLD (measured value storage)

Advantage:
- Digit height 10 mm

Delivery:
Operating instructions, battery, setting gauge (from a measuring range of 25–50 mm), travel case

Technical data:
- Min./max. length measuring range: 0-25 mm
- Digit increment: 0.001 mm
- Measuring surface diameter: 6.5 mm
- Measuring arrangement: Standard
- Measuring spindle increments: 0.5 mm
- Bracket depth: 24 mm
- Functions: Reset (Zeroing the display) | ABS function | With mm / inch switching | Origin (Dimension preset) | Lock-function (Keybord lock) | Hold-function (AE lock)
- Material of measuring bolt: Carbide
- Digit height: 10 mm

31403...	IP 40 / ER	Ident. No.	006 ●

Prod. Gr. 305

Mitutoyo Electronic micrometers (DIN 863)

QuantuMike IP65

DIGIMATIC IP 65

NEW

Ident. No. 025

p. 1263

Application:
For measuring e.g. shaft diameters, external dimensions on workpieces etc.

Execution:
- Carbide-tipped measuring surfaces
- ABS function
- HOLD (measured value storage)
- Origin (measurement presetting)
- with ratchet thimble
- Tolerance value setting with evaluation
- S1 bi-directional Digimatic data output

Advantage:
- Warning function in the event of excessive approach speed
- Calculation function (Ax+B): The magnitude of the deviation from the machine processing target value and the machine compensation value can be read directly
- Calibration plan warning
- Serial number of the measuring instrument can be read out via the interface
- Settings can be changed on the PC

Delivery:
Includes box, wrench, battery, setting standard (from 25 mm), up to 50 mm measuring range with factory test certificate

Technical data:
- Digit increment: 0.001 mm
- Measuring surface diameter: 6.35 mm
- Measuring arrangement: Standard
- Measuring spindle increments: 2 mm
- Material of measuring bolt: Carbide
- Digit height: 7.5 mm

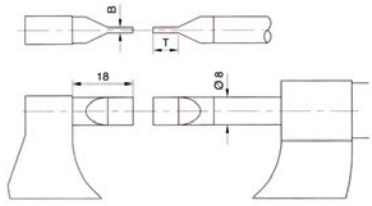
ATORN Micrometer
with narrow measuring surfaces

D



Application:
For measuring narrow external recesses.

Execution:
- Scale with anti-glare, brushed chromium plated finish
- Measuring faces made of hardened steel
- Friction coupling for consistent, repeatable measuring force
- Non-rotating measuring spindle

Advantage:
- Accesses hard-to-reach measuring points

Delivery:
In a wooden case

Min./max. length measuring range		0-25 mm	25-50 mm	50-75 mm	75-100 mm

Prod. Gr. 3AD

ATORN Micrometer (DIN 863)
with 30 degree tips

D

HIGHLIGHT

Application:
For measurement in small recesses, hard-to-reach places and on very small surfaces.

Execution:
- Anti-glare, matt chrome-plated finish on reading elements
- Carbide measuring surfaces
- Friction coupling for consistently repeatable measuring force of 5-10 N
- With spindle clamp
- Handle prevents transfer of heat from the hands

Advantage:
- Extremely stable frame. Better bending than required by DIN 863.
- Very high-contrast and durable scale, sharply recessed and black

Delivery:
Supplied in a high-quality wooden case

Min./max. length measuring range		0-25 mm	25-50 mm	50-75 mm	75-100 mm
Vernier scale		0.01 mm	0.01 mm	0.01 mm	0.01 mm

Prod. Gr. 3AD

ATORN Snap gauge micrometer (DIN 863)

With 2 spindles stacked on top of each other

D

HIGHLIGHT

Application:
The snap gauge micrometer can be used to cost-effectively replace many individual,
fixed snap gauges
with fits up to IT7. An even higher accuracy is obtained when
setting the dimensions with parallel gauge blocks.

Execution:
- Anti-glare, matt chrome-plated finish on reading elements
- Carbide measuring surfaces
- Friction coupling for consistently repeatable measuring force of 5-10 N
- With spindle clamp
- Handle prevents transfer of heat from the hands
- Two independent measuring spindles mounted on top of each other

Advantage:
- Extremely stable frame. Better bending than required by DIN 863.
- Very high-contrast and durable scale, sharply recessed and black
- Replaces multiple snap gauges within the measurement range

Delivery:
Supplied in a high-quality wooden case

Min./max. length measuring range		0-25 mm	25-50 mm	50-75 mm	75-100 mm	100-125 mm	125-150 mm

Prod. Gr. 3AD

ATORN Thread micrometer (DIN 863)

For measuring male threads

Application:
For measuring flanks and outside diameters on male threads.

Execution:
- Scale with anti-glare, brushed chromium plated finish
- Location hole, diameter 3.5 mm

Advantage:
- Direct measurement of flank diameter
- Replaceable thread inserts

Delivery:
In wooden case, gauge slides and setting gauges not included

Notes:
Inserts for Whitworth and trapezoidal threads deliverable on request

Min./max. length measuring range		0-25 mm	25-50 mm	50-75 mm	75-100 mm	100-125 mm	125-150 mm	150-200 mm

Prod. Gr. 305

Mahr Precision pointer snap gauges

Marameter 840FS

Application:
For precise testing of cylindrical parts directly on the machine tool.

Execution:
- Carbide measuring faces
- Movable anvil spring-mounted on bottom
- Consistent, repeatable measuring force
- Forged steel bracket
- Both measuring probes made from stainless, hardened steel
- Adjustable centring stop

Delivery:
In wooden box, display unit not included

Notes:
Other sizes up to 500 mm available on request

Min./max. length measuring range		10-30 mm	30-60 mm	60-100 mm	100-150 mm	150-200 mm

ORION® Depth caliper (DIN 863)

Application:
For measuring bore depths and shoulders.

Execution:
- Scale with anti-glare, brushed chromium plated finish
- Steel measuring needles hardened and lapped
- Measuring range per measuring needle: 25 mm
- Advanced friction coupling

Delivery:
In a case

Technical data:
- Digit increment: 0.01 mm
- Bridge length: 102 mm
- Bridge width: 17 mm
- Measuring surface diameter: 4.5 mm
- Measuring spindle increments: 0.5 mm
- Spindle clamping: Yes

0-100 mm	4	100	●
0-150 mm	6	150	●

Prod. Gr. 3BB

ORION® Electronic depth micrometer (DIN 863)

Application:
For measuring bore depths and shoulders.

Execution:
- ON/OFF
- Steel measuring needles hardened and lapped
- Measuring range per measuring needle: 25 mm
- Advanced friction coupling
- Zero setting at any position
- mm/inch switch-over

Delivery:
In a case, with battery (1 x 1.5 V type SR44)

Min./max. length measuring range		0-100 mm
Digit increment (mm)		0.001
Bridge length (mm)		100

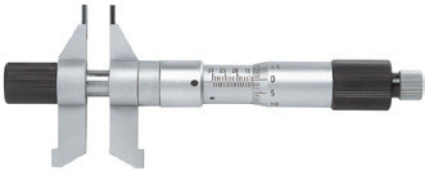
Prod. Gr. 3BB

ATORN Internal micrometers (DIN 863)
with measuring jaws

Application:
For measuring e.g. bores during turning, milling and grinding processes.

Execution:
- Scale with anti-glare, brushed chromium plated finish
- Ball bearing measuring spindle
- Carbide measuring faces
- Advanced friction coupling for consistent, repeatable measuring force
- Internal double-sided scale sleeve

Delivery:
In a wooden case



Min./max. length measuring range		5-55 mm
Error limit (µm)		2.5
Vernier scale		0.01 mm
Measuring depth (mm)		23

Dual measuring spouts

Application:
For measuring e.g. bores during turning, milling and grinding processes.

Execution:
- Scale with anti-glare, brushed chromium plated finish
- Measuring faces made of hardened steel
- Friction coupling for consistent, repeatable measuring force
- Internal double-sided scale sleeve

Delivery:
In case with setting ring, diameter 30 mm

Min./max. length measuring range		5-55 mm
Vernier scale		0.01 mm
Measuring spindle increments (mm)		0.5
31640...	Ident. No.	010 ●

Prod. Gr. 3BB

ATORN Inside micrometer set (DIN 863)

for 2-point measurement

Application:
For measuring large bore diameters, distances on workpieces, etc.

Execution:
- Scale with anti-glare, brushed chromium-plated finish
- Carbide-tipped measuring faces
- Can be individually configured for the diameter being measured
- Graduated drum, Ø 17 mm
- Measuring body, 25 mm, adjustable
- Threaded connection, M7 x 1

Advantage:
- Ready for measuring with no special settings required
- High level of measuring accuracy due to extension rods hardened at the ends, lapped along the length of the gauge block and with insulated grips to prevent transfer of heat from the hands
- Measuring range extendible via screw-on extensions

Delivery:
In wooden case

Min./max. length measuring range		50-150 mm	50-250 mm	50-450 mm	50-850 mm	50-1450 mm

Hartig Internal micrometer (DIN 863)

Micromar 44F

Ident. No. 025–075

Ident. No. 100–475

Application:
For measuring internal dimensions.

Execution:
- The spindle movement is sluggish up to 100 mm to prevent the scale drum from adjusting during measuring. From 100 mm, the spindle is smooth-running and features a clamping ring
- Precision version, better than DIN 863
- Curved measuring surfaces made from hardened steel
- From 100 mm with insulated grip

Delivery:
in plastic case

Technical data:
- Vernier scale: 0.01 mm
- Measuring spindle increments: 0.5 mm
- IP protection class
- Material of measuring bolt: Steel
- Measuring surface diameter: 6 mm

TESA IMICRO internal micrometers, individual devices (DIN 863)

Analogue measurement display

I I/AC

Application:
For high-precision measurement of through-bores, even at high measuring depths.

Execution:
- Friction clutch for consistent, repeatable measuring force
- self-centring and self-aligning
- Model 3.5-12 mm: hardened steel measuring surfaces
- Model 11-100 mm: titanium-coated measuring surfaces
- Model 100-300 mm: carbide-tipped measuring surfaces

Advantage:
- Ground step taper for high precision
- Insensitive to influence of body heat from the user's hand and fluctuations in ambient temperature
- The only 3-point internal micrometer working on the Abbe principle

Delivery:
incl. measurement report

Notes:
with 150 mm measuring depth extension from size 200-225 mm

Technical data:
- Measuring spindle increments: 0.5 mm

Mahr 44 EWR digital 3-point inside micrometer (DIN 863)

multiCOM | IP 65

NEW

Application:
For measuring bores and short centring shoulders in series.

Execution:
- Self-centring sensor head with three measuring contacts (arrangement 3x 120°)
- Large, high-contrast digital display with clear tolerance symbols
- Interchangeable sensor heads
- From 12 mm, measuring jaws for measurements to the bottom of the bore

Advantage:
- Extremely easy to use with practical functions
- Lightweight and compact basic unit for optimal handling
- 1.5 mm spindle pitch for quick adjustment

Delivery:
Basic unit, sensor head, operating instructions, battery (CR 2450N), case

Technical data:
- Digit increment: 0.001 mm
- Measuring spindle increments: 1.5 mm
- IP protection class: IP 65
- Functions: Reset (Zeroing the display) | ABS function | Preset function | TOL (Tolerance and warning limits input) | Lock-function (Keybord lock) | Data (Data transfer) | With mm / inch switching

Mahr 844 EWR digital 3-point inside quick-measuring device

NEW

Application:
For measuring bores and short centring shoulders in series. Quickly perform measurements by releasing the lever.

Execution:
- Self-centring sensor head with three measuring contacts (arrangement 3x 120°)
- Large, high-contrast digital display with clear tolerance symbols
- Interchangeable sensor heads
- Release lever for quick series measurements
- From 12 mm, measuring jaws for measurements to the bottom of the bore

Advantage:
- Ergonomically shaped pistol grip for optimal handling
- Two data buttons are integrated into the lever for optimal handling in all measuring directions
- Large, high-contrast and rotating display for reliable reading of the measured values

Delivery:
Basic unit, sensor head, operating instructions, battery (CR 2450N), case

Technical data:
- Digit increment: 0.001 mm
- IP protection class: IP 65
- Functions: Reset (Zeroing the display) | ABS function | Preset function | TOL (Tolerance and warning limits input) | Lock-function (Keybord lock) | Data (Data transfer) | With mm / inch switching | Hold-function (AE lock)

Prod. Gr. 305

Mitutoyo electronic internal micrometers

3-point internal micrometer

Application:
For measuring through-bores and short centring shoulders in series production.

Execution:
- LCD digit size 7.5 mm
- with DIGIMATIC interface
- Friction clutch for consistent, repeatable measuring force

Advantage:
- Long service life and high impact resistance
- suitable for use in the presence of coolants and cutting oils

Delivery:
Includes box, adjustment wrench, SR-44 battery, factory test certificate

Notes:
Setting ring and extensions not included

Technical data:
- Digit increment: 0.001 mm
- Design of measuring contact: Titanium-coated tungsten carbide
- IP protection class: IP 65
- Functions: ABS function | Automatic switch-off | Preset function | Hold-function (AE lock) | Lock-function (Keybord lock)

Vernier scale 3-point inside micrometers (DIN 863)

with large measuring ranges

NEW

Application:
For measuring through holes and blind holes

Execution:
- High-precision measuring system with three synchronous-running measuring spindles
- Central bevel gear drive with a high level of accuracy
- Each unit has an extremely large measuring range
- Self-centring
- Temperature-compensating design with insulation against hand heat
- Parallax-free scale engraving

Advantage:
- Spindle measuring system with large measuring range
- Centring system with constant measuring force, independent of the user
- Lower wear compared to conical systems
- Can be extended up to 15 metres using measuring depth extensions and centring devices (not included in the scope of delivery)

Delivery:
including manufacturer certificate in case

Technical data:
- Vernier scale: 0.001 mm
- Design of measuring contact: Carbide
- Measuring spindle increments: 1 mm
- IP protection class: IP 52
- Distance from base of hole: 0 mm

Prod. Gr. 3MT

Slotmaster groove distance measuring device

For internal and external grooves

Application:
Measuring grooves and recesses as well as internal and external axial distances

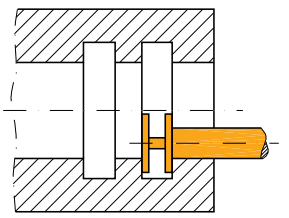
Execution:
- Spring-loaded measuring system with retraction lever
- Interchangeable indicator contact points
- Robust handle with base
- Shock-resistant dial gauge with 30 mm measuring difference
- Adjustable tolerance marks
- Splash-proof

Delivery:
Slotmaster including indicator contact point, setting gauge, manufacturer certificate, in case

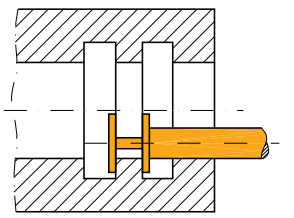
Notes:
CAUTION: With the 0-30 mm indicator contact point, internal measurement is only possible from 1.2 mm (double measuring disc thickness)

NEW

Technical data:
- Measuring span: 30 mm
- Scale value: 0.01 mm
- Measuring surface diameter: 11 mm
- Measuring surface thickness: 0.6 mm



Measuring the slot width



Measuring the space between 2 grooves

Prod. Gr. 3MT

Comparison measuring instrument version 2
for internal and external measurements

Application:
For universal measurement of various tasks, e.g. external and internal measurement of bores, threads, toothing, recesses, grooves etc.

Execution:
- 1 adjustable fixed measuring arm
- 1 moving measuring arm for internal and external measurements, spring-mounted for consistent, repeatable results, measuring direction reversible, measurement path approx. 18 mm
- robust, torsion-free tubular structure
- Measured values displayed by dial gauge, precision pointer or electronic measuring probes
- Adjusted using a setting device with gauge block combinations, master gauges, ring gauges or other material measures
- Can be extended up to 2,000 mm using extensions

Advantage:
- Flexible system

Delivery:
Basic unit in wooden box, incl. adapter for old version 1 indicator contact points

Notes:
Without dial gauge or dial indicator

Technical data:
- Min./max. external length measuring range: 0-200 mm
- Min./max internal length measuring range: 25-250 mm
- Measurement force: 5 N

TESA UNIMASTER

Universal measuring instrument for large measuring ranges

Application:
For measuring particularly large internal and external dimensions. The TESA UNIMASTER is based on the general concept of an inside micrometer with two-point contact. By mounting extensions with built-in gauge blocks on the measuring element, any dimension within the vast application range can be measured directly.

Version:
- Hardened measuring spindle, thread ground from one piece
- Switch easily from internal to external measurement using adjusting screw
- Extensions can be connected via coupling system
- Impact-protected dial gauge with measuring range +/-0.4 mm
- Micrometer measuring difference 25 mm
- Error limit: 5 µm measuring element + extensions
- Gauge block extensions with stable protective tube, flat and spherical measuring surface

Advantage:
- Very high measuring range possible
- High accuracy
- Heat-resistant

Scope of delivery:
Ref. no. 010 UNIMASTER measuring element:
Measuring element with calibration certificate
Ref. no. 400 UNIMASTER set:
1 measuring element
1 pair measuring pins for internal measurements
1 pair measuring pins for internal and external measurements
1 pair measuring pins for external measurements
1 setting standard
25/50/75/100/125/150/300/450/600 mm extensions
Special screwdriver for extensions
1 set of support accessories
Transport case with rollers
With calibration certificate for each setting standard, measuring element and extension
Ref. no. 401 UNIMASTER set with 1,000 mm extension:
with additional 1,000 mm extension

ATORN Spring divider with replaceable carbide tips

HIGHLIGHT

Application:
For marking dimension lines, e.g. for hole circles.

Execution:
- With quick-action clamping nut and consistent spring tension
- Extra strong, square legs
- Continuous spindle

- Replaceable tips

Advantage:
- Carbide tips with longer service life

Technical data:
- Material: Carbide

ATORN Marking-off vernier callipers
with fine adjustment

A

Application:
For marking off on workpieces by directly setting the required dimensions

Execution:
- Gauge bar and marking ruler made from one piece
- Measuring faces very finely ground, made of alloyed steel, hard-chrome plated

- Scale and vernier scale with anti-glare, brushed chromium-plated finish

Technical data:
- Max. length of application area: 300 mm
- Vernier scale: 0.05 mm

Mahr Height measuring and marking-off device
Digimar 814 SR

M multiCOM

Application:
For marking scale lines on workpiece surfaces and for measuring heights and clearances.

Execution:
- Data output
- Fine adjustment
- Carbide-tipped marking-off needle
- Easy-grip, secure base
- Reset function
- Zero setting at any position
- mm/inch switch-over
- Auto off
- Preset function
- ABS function

Advantage:
- Key lock to prevent unintentional adjustment
- Switch on by moving the slider
- Large hand wheel for positioning and measuring

Delivery:
Marking-off tip, battery, box, operating instructions

Technical data:
- Digit increment: 0.01 mm
- Base length x base width: 180 x 80 mm
- Data transmission type: multiCOM

ATORN Ceramic gauge block sets (ISO 3650)

In tolerance classes 0 and 1

AF

Application:
For testing and calibrating measuring instruments and test equipment.

Execution:
- Gauge blocks are marked with an identification number
- made from high-quality ceramic

Advantage:
- Up to 10x longer service life than steel
- Corrosion-resistant
- Non-magnetic
- Very low maintenance

Delivery:
in wooden case, without calibration

ATORN Carbide gauge block sets (ISO 3650)

In tolerance classes 0 and 1

AF

Application:
For testing and calibrating measuring instruments and test equipment.

Execution:
- Gauge blocks are marked with an identification number
- made from carbide

Advantage:
- Up to 20x longer service life than steel
- Very low thermal expansion

Delivery:
in wooden case, without calibration

ORION Steel gauge block set (ISO 3650)

long version

Application:
For testing and calibrating measuring instruments and test equipment.

Execution:
- Made from high-quality, aged special steel
- Hardened
- Hand-lapped
- Gauge blocks are marked with an identification number

Delivery:
In wooden case, calibration on request

Number of pieces in assortment/set (PCS)			8

ORION Steel gauge block sets (ISO 3650)

for calibrating and testing callipers and height gauges

AF AC

Application:
For the specific testing and calibration of vernier callipers and height gauges.

Execution:
- made of high-quality, aged special steel
- hardened
- hand-lapped
- Gauge blocks are marked with an identification number

Delivery:
in wooden case, calibration available on request

ORION® Steel gauge block sets (ISO 3650)

for calibrating and testing outside micrometers

AF

Application:
Specially designed for testing and calibrating micrometers

Execution:
- made from high-quality, aged special steel
- hardened
- hand-lapped
- Gauge blocks are marked with an identification number
-
- Ref. no. 505: to meet the minimum requirements of micrometers
- Ref. no. 510: for the reliable testing of micrometers

Delivery:
in wooden case, without calibration

ORION® Steel gauge blocks (ISO 3650)

long version

Application:
For testing and calibrating measuring instruments and test equipment.

Execution:
- Gauge blocks are marked with an identification number

Delivery:
in wooden case, without calibration

ORION® Gauge block connector

for long gauge blocks

Application:
For secure connection and fastening of long gauge blocks with holes

Execution:
- One side with knurled thumb screw
- Other side with slotted hole and two adjusting screws

Advantage:
- The slotted hole enables flexible use with gauge blocks from other manufacturers

NEW

	Type		
32281...	Gauge block connector	Ident. No.	030 ●

Prod. Gr. 321

ORION® Gauge block accessories set

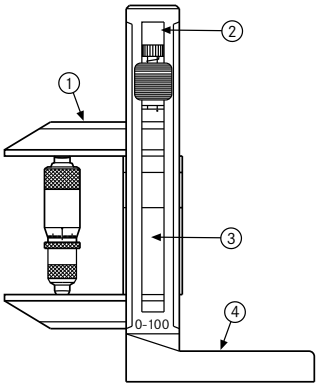
17 pieces

Application:
For the use of gauge blocks for measuring devices, marking instruments, etc.

Execution:
- Adjustable gauge block holder for measuring range 50/100/200 mm
- Scriber point
- Centring tip
- Straight edge
- Base for gauge block holders
- One pair of flat measuring jaws for external measurements
- One pair of blade tips for groove diameters
- One pair each of half-round measuring jaws with cylindrical attachment 4/10/20 mm

Advantage:
- Using this set cares for and preserves gauge blocks in

Delivery:
In a case



① Measuring arm
② Gauge block holder
③ Gauge blocks
④ Base

ATORN Test pin sets in wooden box (DIN 2269)

made from stainless and acid-resistant steel

AE

NEW

Application:
For measuring bore spacings, bore diameters, angularity of bores etc.

Execution:
- ground and lapped
- hardened 58-62 HRC
- Rust- and acid-resistant steel
- Diameter from 0.300 to 0.999 mm with a length of 40 mm; diameter from 1.000 mm with a length of 70 mm
- diameter from 3.00 mm: One end with 30-45° chamfer; other end deburred with diameter marking on end face
- diameter from 1.5 to 2.999 mm: One end with 30-45° chamfer; other end deburred with diameter marking on outer surface
- diameter from 1.00 to 1.499 mm: One end with 30-45° chamfer; other end deburred without diameter marking
- up to 0.999 mm: Both ends deburred, without diameter marking

ATORN ORION® Individual test pins (DIN 2269)

Tolerance class 1 (+/- 0.001 mm) diameter 1.00 to 1.99 mm, 0.01 mm increments

AE

NEW

No. 32481

Application:

No. 32470: For measuring bore spacings, bore diameters, angularity of bores etc.

No. 32481: For measuring bore hole clearances, bore diameters, angularity of bores etc.

Execution:

- **No. 32470:**
  - ground and lapped
  - hardened 58-62 HRC
  - Rust- and acid-resistant steel
  - Diameter from 0.300 to 0.999 mm with a length of 40 mm; diameter from 1.000 mm with a length of 70 mm
  - diameter from 3.00 mm: One end with 30-45° chamfer; other end deburred with diameter marking on end face
  - diameter from 1.5 to 2.999 mm: One end with 30-45° chamfer; other end deburred with diameter marking on outer surface
  - diameter from 1.00 to 1.499 mm: One end with 30-45° chamfer; other end deburred without diameter marking
  - up to 0.999 mm: Both ends deburred, without diameter marking
- **No. 32481:**
  - Ground and lapped
  - Hardened 60-64 HRC
  - Diameter of 0.300 to 0.999 mm with a length of 40 mm; diameter from 1.000 mm with a length of 70 mm
  - from diameter 3.00 mm: One end with 30-45° chamfer; other end deburred with diameter marking on end face
  - from dia. 1.5 to 2.999 mm: with 30-45° chamfer on both sides; diameter marking on the outer surface
  - from dia. 1.00 to 1.499 mm: with 30-45° chamfer on both sides; without diameter marking
  - up to 0.999 mm: both ends deburred, without diameter marking

Notes:

No. 32481: Engraving is only possible from approx. 6 mm diameter and only with a few characters.

Prod. Gr. 3DD

ORION® Plane-parallel test glass

flatness tolerance 0.125 µm

AG

Application:
Optical flat for testing the flatness of a surface using the interference method

Execution:
- For testing the flatness of measuring surfaces on metal and glass objects such as gauge blocks.

Delivery:
in case

Technical data:
- Diameter: 45 mm
- Flatness tolerance: 0.03 µm
- Nominal dimension in assortment: 15 mm

41520...	Ident. No.	010 ●

Prod. Gr. 454

ORION® Plane-parallel test glasses sets

for measuring range 0-25 mm

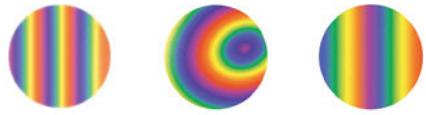
AQ

Application:
For simultaneously measuring the parallelism and flatness of flat measuring surfaces on outside micrometers and dial snap gauges using the interference method

Execution:
- four different thicknesses for parallelism testing in different spindle positions (for rotating measuring spindles)
- For outside micrometers with 0.5 mm thread pitch

Delivery:
In a case

Technical data:
- Diameter: 30 mm
- Flatness tolerance: 0.03 µm
- Alignment tolerance: 0.3 µm
- Nominal dimension in assortment: 15.62 mm | 15.75 mm | 15.87 mm | 16 mm



31419...	Plane-parallel test glasses	Ident. No.	100 ●

Prod. Gr. 3BC

ORION® Test spheres made of hardened gauge steel

Application:
For testing bore holes or internal cones.

Delivery:
Each 2 x diameter 1–25 mm, in a case.

Technical data:
- Number of pieces in assortment/set: 50 PCS
- Pitch: 1 mm
- Material: Gauge steel

32155...	Ident. No.	030 ●

Prod. Gr. 3BD

ORION® Test spheres in pack of 10 (DIN 5401)

Application:
For testing bore holes or internal cones.

Delivery:
10-pack

Technical data:
- Material: Gauge steel

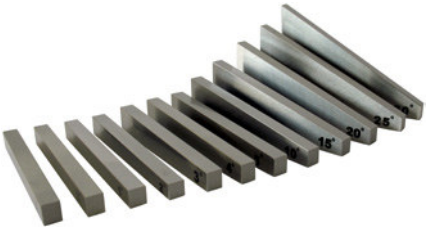
ORION® Angle standards made of hardened gauge steel

Application:
For precise setting and checking of angles.

Execution:
- Smallest graduation 15' (¼°)
- manufacturer tolerance ± 30"

Delivery:
Set: 15', 30', 1°, 2°, 3°, 4°, 5°, 10°, 15°, 20°, 25°, 30°, supplied in case.

Technical data:
- Number of pieces in assortment/set: 12 PCS
- Length: 76.4 mm
- Width: 6.35 mm



32155...	Ident. No.	020 ●

Prod. Gr. 3BF

TESA TECHNOLOGY Set of adjustable parallel rests

Application:
Parallel guide for use as a setting standard for measuring instruments or as a gauge for internal dimensions on plane-parallel surfaces.

Execution:
- Hardened steel
- The two wedge-shaped halves of each parallel are held together by a dovetail joint and secured with two screws
- Set with six versatile parallels

Advantage:
- Each dimension can be flexibly adjusted within the height range

Delivery:
with PH1 cross-head screwdriver in plastic case

Technical data:
- Number of pieces in assortment/set: 6 PCS
- Width: 7 mm
- Composition of set: Height 10-13 mm x length 44 mm; height 13-17 mm x length 54 mm; height 17-24 mm x length 68 mm; height 24-33 mm x length 90 mm; height 33-44 mm x length 106 mm; height 44-57 mm x length 129 mm

ORION® Plug gauges made of gauge steel

Fits H6, H7, H8

Z

EXTENDED PROGRAM

Application:
For checking maximum and minimum dimensions of boreholes.

Execution:
- **Ident. No. 005–360:** Wear allowance in accordance with DIN EN ISO 1938-1
- **Ident. No. 500–834:** Wear allowance in line with DIN EN ISO 1938-1

ORION® Plug gauges made of gauge steel (DIN 2245)

ISO choice of fit

Z

Illustration may be different

Application:
For checking maximum and minimum dimensions of boreholes.

Execution:
- Wear allowance in accordance with DIN EN ISO 1938-1

- Selecting the fit: Fields A-ZC in quality 6-13
- Please specify the desired fit when submitting your enquiry/order

Notes:
Only for quality 6 and higher. A surcharge will be applied to fine fits smaller than 6. Not for intermediate dimensions or numerical tolerances.

ORION® Groove width gauge (DIN 7150)

Application:
For checking flat fits, e.g. of grooves.

Execution:
- Wear allowance in accordance with DIN EN ISO 1938-1

Notes:
No. 32516: When ordering, please remember to specify the workpiece fit or tolerance. For numerical tolerances (e.g. +/- 0.005), a surcharge is applicable.

Technical data:
- Material: Gauge steel

ORION® Snap gauges, double-jaw/single-jaw (DIN 7150)

up to 100 mm with choice of diameter and tolerance

AD

EXTENDED PROGRAM

Application:
For checking the maximum and minimum dimensions of shanks.

Execution:
- Wear allowance in accordance with DIN EN ISO 1938-1
- Diameter selection within the specified diameter range
- Fit/tolerance IT6 or greater
- **No. 32545:** double-ended
- **No. 32546:** single-ended

Notes:
When making an enquiry or placing an order, please specify the diameter and fit or tolerance. Fits/tolerances below IT6 are subject to a surcharge

Technical data:
- Tolerance class: >= IT6
- Material: Gauge steel

ORION® Thread pitch gauges made of gauge steel

for metric ISO fine thread MF4 to MF40

MF | AA | AB

Application:

No. 32700: For testing the flank diameter of female threads and compliance with minimum dimensions of the external diameter.

No. 32705–32706: For testing the flank and core diameter of male threads.

Execution:

- for metric ISO fine threads
- **No. 32700:** Thread plug gauge
- **No. 32705:** Thread go ring gauge
- **No. 32706:** Thread no-go ring gauge

Technical data:

- Material: Gauge steel

leitech Thread plug gauges with depth measurement (DIN 13)

Standard metric ISO thread

M

Application:

No. 32850–32851: For testing threads and measuring thread depths in one pass.

No. 32853: For checking threads and measuring thread depths in one pass.

Execution:

- Direct reading of the thread depth
- **No. 32850:** Measuring depth gradation of 0.5 mm on the scale sleeve
- **No. 32850–32851:**
  - Thread inserts hardened and ground
  - Black anodised aluminium housing
- **No. 32851:** Measuring depth gradation of 0.1 mm using vernier scale, additional clamping of scale sleeve
- **No. 32853:**
  - Hardened and ground thread inserts
  - black anodised aluminium housing
  - Measurement depth reading via digital display 0.01 mm

Delivery:

No. 32853: incl. batteries and matching adjustment tool

Technical data:

- Tolerance class: 6H

leitech Motorised thread test arbour DMG-Light (DIN 13)

Versions with Sylvac or Mahr electronics

M

NEW

Application:
For checking threads and measuring thread depths in one step. Motorised screwing considerably reduces the working time compared to manual arbours.

Execution:
- Fast thread testing and thread depth measurement for series production
- The motorised drive with torque setting from 8 Ncm to 32 Ncm ensures process reliability
- Depth measurement accuracy +/- 0.025 mm
- Worn thread inserts can be replaced
- **Ident. No. 006–066:** Version with Sylvac electronics and cable interface
- **Ident. No. 106–166:** Version with Mahr electronics and MarConnect wireless data output

Advantage:
- Lightweight design for improved handling
- Flex adapter for easier screwing into the thread

Delivery:
incl. indicator contact point and matching flex adapter, wear bushings, adjustment tool, key for changing the adapter, charger with two Li-ion batteries (3.7 V, 3,500 mAh), in plastic case

Technical data:
- Tolerance class: 6H

ORION® Feeler gauges
Accuracy class TK 2

Application:
Suitable for inspecting gap dimensions and setting clearances.

Execution:
- Gauge blades made from hardened spring steel
- Tapered
- Can be clamped in place using a hexagon nut

Delivery:
In plastic box

Technical data:
- Length: 100 mm
- Width: 10 mm

	Min./max. length of application area	Nominal dimension in assortment	Number of sheets (PCS)

ORION® Feeler gauge strips, dimensions 12.7 mm x 5 m

Application:
For use in various areas of mechanical engineering, e.g. measuring dimensional tolerance between 2 components, as alignment references etc.

Execution:
- Made from high carbon steel, hardened
- Suitable for feeler gauge assortment in wall bracket
- **Ident. No. 008–100:** Gauge strip marked with dimensions

Delivery:
In can

Shimming sheets in high-precision version

Format blanks

Application:
For setting up tools, adjusting apparatuses, levelling tolerances, aligning devices, aligning workpieces etc.

Execution:
- **No. 36240–36241:**
  - Cold-rolled INOX spring steel
  - Alloy with 17% chromium and 7% nickel
  - Corrosion-resistant
  - High strength
  - Weakly magnetic
- **No. 36244:**
  - Cold-rolled spring-hardened brass tape
  - 63% copper and 37% zinc
  - Non-magnetic

Advantage:
- Advantage over rolled materials: evenly aligned

Delivery:
In sturdy sliding carton

ATORN Dial gauges (DIN 878)

CE

Application:
Ident. No. 030: For measuring lengths and differences in length, e.g. concentricity, flatness, position measurements.
Ident. No. 080: For measuring lengths and length differences, e.g. concentricity, flatness, positional measurements.

Execution:
- **Ident. No. 030:**
  - Measuring pin and clamping shank are made from durable stainless steel
  - Coloured tolerance marks for clear identification of the set tolerance fields
  - Comfortable lifting sleeve with additional dust protection function
  - Concentric mm display for larger, clearer digits
- **Ident. No. 080:**
  - Measuring pin and clamping shank are made of durable stainless steel
  - No tolerance marks as standard
  - The dial gauges feature a clamping shank that has a lateral offset of 3.5 mm.
  - Without revolution counter

Advantage:
- Gauge slide with ceramic ball (minimum wear, not electrically conductive)

Delivery:
in a case

For measuring lengths and length differences, e.g. concentricity, flatness, positional measurements.

Execution:
- Measuring pin and clamping shaft made from durable stainless steel
- Extra light so easy to handle
- The plastic housing is highly resistant to chemical influences

Delivery:
In a case

Shockproof dial gauges

Measuring range 1-50 mm

C

Application:

No. 33003 010–33009 010, 33077 010–33078 020: For measuring lengths and length differences, e.g. concentricity, flatness, positional measurements.

No. 33075: For measuring lengths and differences in length, e.g. concentricity, flatness, position measurements.

Execution:

- **No. 33003 010–33009 010, 33077 010–33078 020:** Measuring pin and clamping shaft made from durable stainless steel
- **No. 33075:**
- Measuring pin and clamping shank are made from durable stainless steel
- Fine point adjustment by turning the knurl button

Advantage:

- Impacts against the gauge slide are not transferred to the measuring mechanism; in this way, display accuracy is maintained for a long time.

Delivery:

No. 33003 010–33009 010, 33077 010–33078 020: In a case

Small dial gauges, with long shank for SUBITO, with and without impact protection

Measuring range 1-3 mm

C

Application:

for measuring lengths and differences in length, e.g. concentricity, flatness, position measurements.

Execution:

- measuring pin and clamping shank are made from a durable stainless steel
- with long shaft for mounting in e.g. Subito, etc.

Delivery:

in case

No. 33002

Precision dial gauges with impact protection

Bore for measuring pin lift-off

C

Application:
For measuring lengths and length differences, e.g. concentricity, flatness, positional measurements.

Execution:
- Measuring pin and clamping shaft made from durable stainless steel
- Special stainless steel fine measuring mechanism
- Hole in housing for wire lifter

Advantage:
- Extremely high measurement accuracy

Delivery:
In a case

Notes:
For wire lifter accessories, see article number 33029120

Dial gauge (DIN 878)
with magnetic back

C

Application:
For measuring lengths and length differences, e.g. concentricity, flatness, positional measurements.

Execution:
- Measuring pin and clamping shaft made from durable stainless steel

Advantage:
- Back wall is designed as magnetic clamp (detachable)
- Can be used without stand
- The magnet does not affect dial gauge function

Delivery:
In a case

Ident. No. 010

Prod. Gr. 331

ATORN Electronic dial gauge
with large high-contrast display, designed for production as well as for laboratory

multiCOM IP 52 CE

Application:
For static measurements of lengths and length differences

Execution:
- Zero setting at any position
- Large LCD display (12 mm)
- Keeptronic System
- mm/inch switch-over

Advantage:
- LOCK function (key lock)
- Switched on by the ON button or automatically switched on by moving the button
- Particularly energy-saving electronics (battery lifetime up to 3 years)

Delivery:
Battery (1 x 3 V lithium type CR 2032)

Technical data:
- Length measuring range: 12.5 mm
- Data transmission type: multiCOM
- IP protection class: IP 52
- Min./max. measurement force: 0.5-1.0 N
- Functions: With mm / inch switching | With zero setting at any position | Lock-function (Keybord lock) | Automatic switch-off | Absolute function | Preset function | Reversal of counting direction
- Connection thread: M2.5

Ident. No. 210

Prod. Gr. 303

ATORN Electronic dial gauge

PROXIMITY IP 54 CE

Application:
For measuring lengths and length differences, e.g. concentricity, flatness, positional measurements.

Execution:
- Large LCD display (11 mm)
- Read display value
- Factor adjustable
- mm/inch switch-over

Advantage:
- Measured value classification: Display uses coloured LEDs to indicate when tolerance limits are exceeded

Delivery:
Battery (1 x 3 V lithium type CR 2032)

Technical data:
- Data transmission type: Proximity
- IP protection class: IP 54
- Functions: Rotatable housing | With mm / inch switching | Automatic switch-off | Absolute function | Dynamic Measurement | Colour reading classification | Preset function | Tolerance value entry | Reversal of counting direction | With zero setting at any position | Minimum / Maximum measurement | Automatic switch-on (movement of the slide/measuring bolt)
- Connection thread: M2.5

DIALTRONIC COMPACT small electronic dial gauges

Static measuring tasks, with single-button operation

Application:
For measuring lengths and length differences.

Execution:
- Metal housing
- Large LCD display
- Single-button operation

Advantage:
- Permanent power supply without battery via Power RS

Delivery:
With battery (1 x 3 V lithium type CR 2032)

Notes:
Alternative power supply via data cable (optional)

Technical data:
- Length measuring range: 12.5 mm
- Repeat accuracy: 2 µm
- Shank diameter: 8 mm
- Functions: Absolute function | Preset function | Reversal of counting direction | With mm / inch switching

MarCator 1086 electronic dial gauge

For static measurements

NEW

Application:
For static measurements of lengths and length differences

Execution:
- Hardened glass front with touch operating panels
- Clear tolerance symbols and coloured LED signals (red, green, yellow) for classifying measured values
- High-contrast LCD display
- Operating and display part can be rotated by 280°
- Clamping shank and measuring pin made of hardened stainless steel

Advantage:
- scratch- and shock-resistant surface, with wear-free control buttons
- excellent protection against dust, coolants and lubricants
- Improved measuring reliability in stands, no measurement errors caused by pressing buttons

Delivery:
Battery (CR 2450N), test report, operating instructions, cardboard packaging

Technical data:
- IP protection class: IP 42
- Shank diameter: 8 mm
- Functions: On/Off | With mm / inch switching | Reset (Zeroing the display) | Preset function | TOL (Tolerance and warning limits input) | ABS function | Reversal of counting direction | Lock-function (Keybord lock) | Data (Data transfer) | Hold-function (AE lock) | Colour reading classification | Factor (multiplier for measuring distance)
- Digit height: 11.5 mm
- Connection thread: M2.5

Prod. Gr. 305

MarCator 1087 electronic dial gauge

For static and dynamic measurements

NEW

Application:
For static and dynamic measurements of lengths and length differences, e.g. concentricity measurements, flatness measurements and position measurements.

Execution:
- Hardened glass front with touch operating panels
- Clear tolerance symbols and coloured LED signals (red, green, yellow) for classifying measured values
- High-contrast LCD display
- Operating and display part can be rotated by 280°
- Clamping shank and measuring pin made of hardened stainless steel
- Analogue scale display for visual tracking and detection of dynamic measuring movements

Advantage:
- scratch- and shock-resistant surface, with wear-free control buttons
- excellent protection against dust, coolants and lubricants
- Improved measuring reliability in stands, no measurement errors caused by pressing buttons

Delivery:
Battery (CR 2450N), test report, operating instructions, cardboard packaging

Technical data:
- Digit increment: 0.0005 mm
- Error limit: 0.004 mm
- IP protection class: IP 42
- Shank diameter: 8 mm
- Functions: On/Off | With mm / inch switching | Reset (Zeroing the display) | Preset function | TOL (Tolerance and warning limits input) | ABS function | Reversal of counting direction | Lock-function (Keybord lock) | Data (Data transfer) | Hold-function (AE lock) | Dynamic Measurement | Combined indicator for figure/scale reading | Colour reading classification | Factor (multiplier for measuring distance) | Min./max. memory for concentricity and level testing | Min./max. reverse point search memory

ID-S electronic dial gauges

For static measurements

Application:
For static measurements of lengths and length differences

Execution:
- Absolute linear encoder scale; absolute function retains the 0 setting
- LCD display, digit size 9 mm
- Extra-long battery life, approx. 18,000 hour at 0.001 mm reading, approx. 20,000 hours at 0.01 mm reading
- With Digimatic data output

Delivery:
incl. 1x SR44 battery

Notes:
This digital dial gauge is equipped with a data output, but does not feature an integrated data button. The USB Input Tool Direct cable (optional accessory) and the USB-ITPAK software are required for data transfer.

Technical data:
- Length measuring range: 12.7 mm
- Shank diameter: 8 mm
- Functions: Absolute function | Reversal of counting direction
- Digit height: 9 mm

M2.5 indicator contact points

miniature version with particularly small measuring contacts

Application:

For use in measuring instruments with M 2.5 mm thread, e.g. dial gauges, precision pointers, inductive measuring probes

Execution:

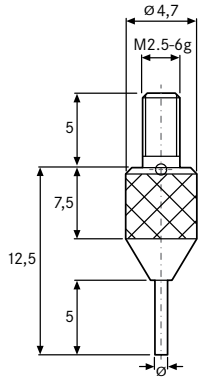
- With particularly small measuring contacts for measurements on very small components
- **Ident. No. 012–018:** Measuring contact: Carbide pin
- **Ident. No. 022–028:** Measuring contact: Carbide ball

Delivery:

In shock-resistant plastic case

Technical data:

- Design of measuring contact: Carbide
- Length: 5 mm



Ident. No. 012–018

ATORN Sensikator dial indicator (DIN 879)

With extremely low measuring force

Application:
For measuring lengths. With extremely low measuring force of 0.14 N, making it especially ideal for measuring highly sensitive and delicate components

Execution:
- impact-resistant
- Precision-guided measuring pin
- Precision glass pointer reduces inertia and improves accuracy when reading the dial
- Pointer fine adjustment
- Adjustable tolerance marks
- Measuring mechanism mounted on ruby bearings
- Especially well suited to use in measuring stands and small measuring benches
- Gauge slide with ceramic ball; reduced wear, anti-magnetic and non-conductive

Delivery:
Includes manufacturer test record, delivered in padded plastic case 250 x 210 x 45 mm

Length measuring range (mm)		0.1
Scale value (mm)		0.001
With free stroke		Yes
Measurement force (N)		0.14
IP protection class		IP 40
Shank Ø (mm)		8
33163...	Ident. No.	040 ●

Prod. Gr. 3AE

ATORN Dial indicator (DIN 879)

Application:
For measuring lengths. Ideal for measuring instruments and flatness and straightness measurements

Execution:
- Precision-guided measuring pin
- Connection for wire lifter
- Pointer fine adjustment
- Adjustable tolerance marks
- Measuring mechanism on ruby bearings
- suitable for internal precision measuring instruments
- **Ident. No. 010–015:** Shock resistant
- **Ident. No. 020–025:**
  - Impact-resistant
  - With rubber bellows

Delivery:
Ident. No. 010–015: in case

Mahr Inductive dial indicator

Millimess 2000W/Wi and 2001W/Wi

Application:

Ident. No. 110–120: For static measurements of lengths and length differences

Ident. No. 210–230: For static and dynamic measurements of lengths and length differences, e.g. concentricity measurements, flatness measurements and position measurements.

Execution:

- Measuring pin precision ball guide for small reversal range
- Adjustable lower end stop and replaceable measuring force spring
- **Ident. No. 110–120:**
  - Clamping shaft and measuring pin made of stainless, hardened steel
  - RANGE (switching the measuring range and scale interval)
- **Ident. No. 210–230:**
  - Clamping shank and measuring pin made of hardened stainless steel
  - RANGE (switching the measuring range and the scale interval)
  - MAX/MIN memory for reverse-point search
  - TIR (MAX-MIN) for concentricity and flatness testing

Advantage:

- Hardened glass front with touch operating panels
- Scratch- and impact-resistant surface
- High-contrast LCD display for clear and accurate readings
- Clear tolerance symbols and coloured LED signals (red, green, yellow) for classifying measured values

Delivery:

Operating instructions, USB data and charging cable type DK-U1, power adapter (with 4 interchangeable adapters) for USB, rubber bellows, screwdriver for prestroke adjustment (0.9 mm hex socket), case

Technical data:

- Length measuring range: 2 mm
- Digit increment: 0.001 mm
- Functions: On/Off | Lock-function (Keybord lock) | Hold-function (AE lock) | Preset function | Reset (Zeroing the display) | ABS function | Reversal of counting direction | Bi-directional data interface | TOL (Tolerance and warning limits input) | With mm / inch switching | Rotatable housing
- IP protection class: IP 64
- Error limit: 0.6 µm
- With free stroke: Yes
- Min./max. measurement force: 0.7-0.9 N
- Shank diameter: 8 mm

ATORN Dial test indicator (DIN 2270)

Application:

For measuring deviations in concentricity, axial run-out, parallelism and flatness. For centring shafts of boreholes and aligning workpieces.

Execution:

- metallic outer ring
- Anti-magnetic components
- Automatic switching of callipers direction
- Measuring mechanism on ruby bearings
- 3 dovetail mounting surfaces

Delivery:

Lever gauge probe, measuring probe with 2 mm diameter cemented carbide ball, 8 mm diameter clamping shaft for mounting on measuring stands, measuring probe wrench with case

Technical data:

- Ball diameter: 2 mm
- Material of measuring ball: Carbide
- Connection thread: M1.6
- Pivot range of measuring sensor: 240 Degree

TESA TESATAST dial test indicators (DIN 2270)

L

Application:
For measuring deviations in concentricity, axial run-out, parallelism and flatness. For centring shafts of boreholes and aligning workpieces.

Execution:
- Rotating dial
- Anti-magnetic components
- Automatic switching of callipers direction
- Measuring mechanism on ruby bearings
- Housing made from one piece, brushed chromium-plated
- Gauge slide with hard chrome-plated ball

Advantage:
- 3 dovetail mounting surfaces

Delivery:
Measuring probe with 2 mm ball diameter, clamping shaft diameter 8 mm, key disc, in plastic case

Technical data:
- Connection thread: M1.4
- Ball diameter: 2 mm
- Pivot range of measuring sensor: 240 Degree

TESA TESATAST dial test indicators (DIN 2270)

Perpendicular version

L

Application:
For measuring deviations in concentricity, axial run-out, parallelism and flatness. For centring shafts of boreholes and aligning workpieces.

Execution:
- Rotating dial
- Anti-magnetic components
- Automatic switching of callipers direction
- Measuring mechanism on ruby bearings
- Housing made from one piece, brushed chromium-plated
- Gauge slide with hard chrome-plated ball
- Perpendicular

Advantage:
- 3 dovetail mounting surfaces

Delivery:
TESATAST measuring probe with 2 mm ball diameter, clamping shaft diameter 8 mm, key disc, in plastic case

Notes:
Centring bracket not included in the scope of delivery

Technical data:
- Connection thread: M1.4
- Ball diameter: 2 mm
- Pivot range of measuring sensor: 240 Degree

TESA RUBYTAST dial test indicators (DIN 2270)

L

Application:
For measuring deviations in concentricity, axial run-out, parallelism and flatness. For centring shafts of boreholes and aligning workpieces.

Execution:
- Rotating dial
- anti-magnetic components
- automatic switching of callipers direction
- Measuring mechanism on ruby bearings
- Housing made from one piece, brushed chromium-plated
- Gauge slide with ruby ball for greater durability and sensitive surfaces

Advantage:
- 3 dovetail mounting surfaces
- Large numbers for better readability
- Scale face is pure white for higher contrast
- Divides the scale face into segments for faster reading of the values

Delivery:
Measuring probe with 2 mm ball diameter, clamping shaft diameter 8 mm, key disc, in plastic case

Technical data:
- Connection thread: M1.4
- Ball diameter: 2 mm
- Pivot range of measuring sensor: 240 Degree

Electronic dial test indicator (DIN 2270)

EXTENDED PROGRAM

Application:
For measuring deviations in concentricity, axial run-out, parallelism and flatness. For centring borehole shanks and aligning workpieces.

Execution:
- Metal housing
- Large LCD display with tolerance display
- Zero setting at any position
- mm/inch changeover
- Dynamic measurements: Min/Max/Max-Min

Advantage:
- Three dovetail mounting surfaces
- Data transmission via Bluetooth(R) or cable

Delivery:
with battery (1x 3 V lithium, type CR 2032)

Notes:
Alternative power supply via data cable (optional)

Technical data:
- IP protection class: IP 54
- Digit increment: 0.001 mm

P-Line lever gauge probes (DIN 2270)
with particularly large measuring range

Application:
For measuring deviations in concentricity, axial run-out, parallelism and flatness. For centring shafts of boreholes and aligning workpieces.

Execution:
- Successor models to the Compac series
- Particularly large measuring range, both overall and per revolution
- Rotating dial
- Automatic switching of probing direction
- Housing made from one piece, brushed chrome-plated

Advantage:
- 3 dovetail mounting surfaces
- Large numbers for better readability
- Scale face is pure white for higher contrast
- Divides the scale face into segments for faster reading of the values

Delivery:
Measuring probe with 2 mm ball diameter, 8 mm clamping shaft diameter, key disc, in plastic case

Technical data:
- Ball diameter: 2 mm

Mitutoyo DIGIMATIC depth measuring instrument
Series 547

Application:
For measuring hole depths, clearances etc.

Execution:
- Capacitive ABSOLUTE linear encoder
- Equipped with a hardened, precision-ground and finely lapped measuring bridge
- Extensions: 10, 20, 30 (2 pieces), 100 mm, to cover the complete range 0-200 mm
- Measuring range of the dial gauge used: 12.7 mm
- With lever for lifting the dial gauge
- Alarm function: Low voltage, adjustment fault, sensor fault, display overflow etc.

Delivery:
Including box and extensions 10, 20, 30 (2 pieces), 100 mm, gauge slide 21JAA224

Technical data:
- Min./max. length measuring range: 0-10 mm
- Measuring depth: 200 mm
- Measurement force: 1.5 N
- Outer diameter: 59 mm
- Functions: ABS function | Data (Data transfer) | Hold-function (AE lock) | Lock-function (Keybord lock) | Manual tolerance marks | With mm / inch switching | On/Off
- Digit height: 11 mm

Prod. Gr. 3MA

ATORN Precision thickness gauges

Measuring force independent of user

Application:
For measuring the thickness of various materials, depending on the indicator contact point.

Execution:
- Sturdy metal handle
- Precision dial gauge
- Spring pressure measurement
- With lifting device
- Shape A indicator contact point (steel plate 30 mm): very soft materials such as rubber blankets, rubber sheets, felt, soft fabrics
- Shape C indicator contact point (steel plate 10 mm): soft materials such as soft leather, cardboard, paper, films
- Shape E indicator contact point (1/8 inch ceramic balls): hard materials such as metals, hard plastics
- **Ident. No. 035–060:** With stand attachment

Advantage:
- Measuring force independent of user
- **Ident. No. 035–060:** Stand attachment for stability

NEW

Notes:
The lowest measuring force is generated when the measuring contacts are closed. The further the measuring contacts are opened, the greater the measuring force.

Technical data:
- Meter diameter: 58 mm

Prod. Gr. 3AH

Standard thickness gauges

Automatic lift

CF

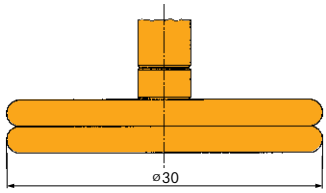
Application:
For measuring the thickness of different materials according to the indicator contact point.

Execution:
- Robust throat
- Precision measuring element
- Measuring pressure applied by the user
- Shapes A and B: rubber blankets, rubber sheets, felt, soft fabrics
- Shape C: soft leather, cardboard, paper, films
- Shape E: sheet metal, hard material

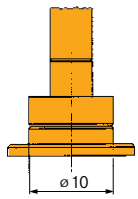
Advantage:
- Automatic lifting: The measuring contact is raised when not in use

Technical data:
- Meter diameter: 58 mm

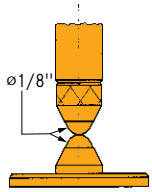
Bow depth 50 mm



No. 33195
Type A



No. 33197
Type C



No. 33199
Type E

Prod. Gr. 331

Pocket thickness gauge

CF

Application:
For measuring the thickness of different materials such as paper, rubber, glass, sheet metal, films, plywood and plastics

Execution:
- Pocket thickness measuring device in compact design
- Precision measuring element

Advantage:
- Extremely compact

Ident. No. 110
Pocket thickness gauge

Flat Ø 10 mm

	Measuring surface Ø (mm)	Min./max. length measuring range	Scale value (mm)	Bracket depth (mm)

Prod. Gr. 331

Film thickness gauge
with lifting device

CF

Application:
For measuring the thickness of films.

Execution:
- Glass and external ring made from one piece
- Insulated handles

Delivery:
in a cardboard case

Technical data:
- Meter diameter: 58 mm

Ident. No. 020

	Measuring surface Ø (mm)	Min./max. length measuring range	Scale value (mm)	mm / U (mm)	Bracket depth (mm)

Prod. Gr. 331

Electronic thickness gauge

multiCOM CF

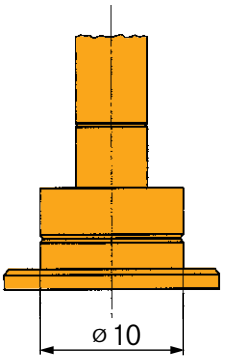
Application:
For measuring the thickness of rubber blankets, rubber sheets, felt and soft materials.

Execution:
- Zero setting at any position
- mm/inch switch-over
- Replaceable gauge slides
- Preset function
- Spring pressure measurement
- With lifting device

Advantage:
- Measuring force independent of the user

Delivery:
3-V lithium battery (type RS 2032), in a cardboard case

Technical data:
- Data transmission type: multiCOM



Type C

	Form	Measuring surface Ø (mm)	Min./max. length measuring range	Scale value (mm)	Bracket depth (mm)

Prod. Gr. 331

IFM internal chamfer measuring instrument

Application:
For measuring the largest diameter of a conical bore or groove.

Execution:
- For measuring tapers of 90° or less

Delivery:
complete with shock-resistant special dial gauge in a case

Technical data:
- Scale value: 0.01 mm

Min./max. length measuring range		0.5-20 mm	20-40 mm
33597...	Ident. No.	110 ●	120 ○

Prod. Gr. 339

Crankshaft test device

CE

Application:
For detecting bends in crankshafts

Execution:
- Dial gauge scale interval: 0.01 mm
- Pendulum weight for positioning dial gauge horizontally

Delivery:
In a wooden case

Technical data:
- Scale value: 0.01 mm

Min./max. length of application area		60-300 mm	60-500 mm
33590...	Ident. No.	310 ●	510 ●

Prod. Gr. 308

Kroeplin Längenmesstechnik — Electronic measuring gauge for external and internal measurements

with charging station

IP 67

Application:

Ident. No. 010–020: For measuring thicknesses, wall thicknesses and external grooves.

Ident. No. 030–050: For measuring bores, recesses and internal grooves

Execution:

- Large and high-contrast LCD display
- Combined digit and scale display
- mm/inch changeover
- Measuring mode ABSOLUTE
- Measured value classification (red/green display)
- 1 fixed and 1 movable measuring arm

Advantage:

- Measured result can be read directly
- no need to change the battery
- Internal memory for 100 measured values
- Manufacturer's warranty extension: If registered on the manufacturer's website within three months of the date of purchase, the manufacturer's warranty is extended by one year. Instructions for this are included in the scope of delivery.
- Reversible scale interval 0.002 mm/0.005 mm/0.01 mm

Delivery:

With traceable test certificate in box, power supply not included

Notes:

Data interfaces for Digimatic, USB and Bluetooth(R) available on request. Suitable accessories: article 33242000 charging station

Kroeplin Längenmesstechnik — Measuring gauge for external measurement of grooves and thicknesses

IP 65 IP 67

Application:

For measuring thicknesses, wall thicknesses and external grooves.

Version:

- 1 fixed and 1 movable measuring arm
- **Digital:**
  - large, high-contrast LCD display (digit height: 8.5 mm)
  - combined digit and scale display
  - mm/inch changeover
  - ABSOLUTE measuring mode
- Measured value classification (red/green display)
- Digital version: Graduation can be switched: 0.001/0.002/0.005/0.01/0.02/0.05 mm
- **Analogue:**
  - adjustable tolerance marks
  - easy adjustment with rotating housing

Advantage:

- Manufacturer's warranty extension: If registered on the manufacturer's website within three months of the date of purchase, the manufacturer's warranty is extended by one year. Instructions for this are included in the scope of delivery.
- **Ref. no. 011, 031, 066, 086:** Measured result can be read directly

Scope of delivery:

with traceable test certificate in the cardboard box

Note:

Digital: data interfaces for Digimatic, USB and Bluetooth® available on request

Bore gauges with probe heads

Application:
For measuring bore holes using comparison measuring instruments.

Execution:
- Repeatability < 1 µm
- One holder for all measuring ranges
- Hardened and DLC-coated probe heads, black
- Zero using setting master
- **No. 33450:** For through holes
- **No. 33453:** For blind holes

Delivery:
Holder with probe heads and drive needles in wooden case, dial gauge and setting rings not included.

SUBITO bore gauges

SU series

Application:
For precise measuring of bores using the 2-point method. Turning and/or moving the device in the hole makes it possible to detect deviations from roundness or cylindricity.

Execution:
- Movable carbide-tipped measuring pin
- **No. 33520:** Fixed, interchangeable measuring pin made of hardened steel
- **No. 33521:** Fixed, interchangeable carbide-tipped measuring pin

Advantage:
- High repeatability 0.5–1.5 µm
- Self-centring in the bore hole
- INVAR pipe (special nickel alloy) guarantees minimum thermal expansion caused by body heat from hands or high ambient temperatures

Delivery:
Without precision pointer, with calibration certificate, in wooden case

Technical data:
- Type: SU

Determine the reversal point

SUBITO bore gauges for blind holes

SS/SSV series

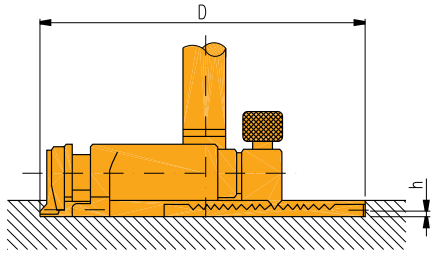
T

Application:
For precise measuring of boreholes using the 2-point method.
For measuring blind boreholes, pilots etc.

Execution:
- Measurements close to the base
- Setting via ring or ESU setting device 33580 .../33582...
- Dial gauges or precision pointers can be used as display units
- **Ident. No. 020–110, 300:**
  - Carbide-tipped vernier callipers and moving probe bolt
  - High measurement reliability, repeat limit 0.001 mm
- **Ident. No. 140:**
  - Carbide-tipped callipers and movable probe bolt
  - High measurement reliability, repeat limit 0.001 mm
  - SSV version with 2 interchangeable measuring heads to cover a wider range of applications

Advantage:
- No reversal-point search required.
- Self-centring in the borehole
- INVAR pipe (special nickel alloy) guarantees minimum thermal expansion caused by body heat from hands or high ambient temperatures

Delivery:
without precision pointer, in a wooden box



Type			SS	SS	SS	SS	SSV
Min./max. Ø of measuring range			20-50 mm	50-110 mm	110-300 mm	300-600 mm	20-140 mm

OD plug gauges for series inspection

T

Application:
For quick comparison measurements of bores during series inspections.
The slightly undersized, ground sleeve is used to guide and centre the plug gauge in the bore.

Execution:
- Cemented carbide measuring contacts and measuring needles (wear-resistant)
- Plug gauge from dia. 130 mm can be supplied as a cross-shaped sleeves or cross-shaped sleeves with skids
- Version for blind holes with reduced face size

Advantage:
- Easy to use
- Minimum measuring times
- Maximum measuring accuracy
- Robust and reliable
- Adapted to the desired bore diameter and tolerance

Notes:
In order to carry out measurements, an additional device holder no. 33561, a display unit (dial gauge, precision pointer or inductive measuring probe) and an adjustment tool are required. Please indicate the required diameter, measuring height and tolerance when ordering. **Surcharge for tolerance range below 9 µm or above 200 µm on request.**
Version for through holes with enlarged front dimensions available on request
For diameters below 15 mm, the maximum measuring depth cannot be increased via the device holder or via standard measuring depth extensions.

Technical data:
- Design of measuring contact: Carbide
- Material of sleeve: Steel
- Repeat accuracy: 1 µm
- Connection thread: M11 x 0.75

Device holder for plug gauges OD

For mounting a gauge with shank dia. 8 mm

Application:
For connecting an OD bore plug gauge and display unit.

Execution:
- **Ident. No. 025, 031:** For plug gauges Ø 60 mm
- **Ident. No. 050:** Special holder for electronic measuring probes
- **Ident. No. 060:** With retractor for blind hole plug gauges or easily-scratched parts

3D articulated measuring stands

Model series with high-quality, light metal components for the mounting arm

Application:
For clamping dial gauges, precision pointers, lever gauge probes etc.

Execution:
- Mechanical, maintenance-free central clamping
- **Ident. No. 003–010:**
  - Dovetail mount and 8-mm dia. mount (6-mm dia. possible with adapter)
  - Strong adhesive magnet with prismatic base
- **Ident. No. 015:** Cylindrical mounting spigot, diameter 10 mm, for clamping in collet chucks or drill chucks
- **Ident. No. 015–018:** Dovetail mount and holder Ø 8 mm
- **Ident. No. 018:** Switching magnet base with contour bond. The steel slats adjust to fit the support surface, suitable for uneven surfaces

Advantage:
- Simple, quick operation
- Highly flexible, exact positioning

Delivery:
Without dial gauge and lever gauge probe

3D articulated measuring stands

In transport case

Application:
For clamping dial gauges, precision pointers, lever gauge probes etc. Available as a case set for assembly or other mobile applications e.g. maintenance, mobile calibrations etc. The case offers space for carrying up to two dial gauges or lever gauge probes.

Execution:
- Mechanical, maintenance-free central clamping mechanism
- Dovetail mount and 8 mm dia. mount (6 mm dia. possible with adapter)
- Powerful holding magnet with prismatic base
- In plastic case with foam insert
- Foam insert has recesses for a dial gauge with an external diameter of 40 mm and a dial gauge with an external diameter of 60 mm

Advantage:
- simple, quick operation
- high degree of manoeuvrability, exact positioning

ATORN 3D articulated arm with steel clamps

as an assembly aid

Application:
For holding and freely positioning most parts, even those with difficult-to-hold shapes. Parts can be held and fixed in any position to keep both hands free to work on your task. Useful for measuring, assembling, soldering, welding, cutting, gluing and more

Execution:
- Mechanical, maintenance-free central clamping mechanism

- Includes additional clamping screw. The lower half of the arm can be fixed independently of the central clamping mechanism, making it easier to precisely position the top half.
- With two solid steel clamps, one with a clamping width of 75 mm, one with a clamping width of 100 mm

Advantage:
- simple, quick operation
- high degree of manoeuvrability, exact positioning

Operation radius (mm)		620
Retaining force (N)		90

Prod. Gr. 3AB

ATORN 3D articulated arm with spring clip

as holder for PCBs, sheet metal, plates

Application:
For holding and freely positioning flat components e.g. PCBs, sheet metal components or other plate materials

Execution:
- Mechanical, maintenance-free central clamping mechanism

- Features a heavy steel base with a diameter of 150 mm, non-slip thanks to the rubber feet
- An earthing wire can be connected to the steel base
- Strong, rubberised spring clip, 50 mm jaw width

Advantage:
- simple, quick operation
- high degree of manoeuvrability, exact positioning

ATORN Aluminium mounting plate M8

Accessories for 3D articulated arms

Application:
For mounting 3D articulated arms when a switching magnet cannot be used e.g. on aluminium profiles, plastics, wood or directly on walls.

Execution:
- Made of aluminium, blue anodised

- Central M8 connecting thread for accommodating a 3D articulated arm
- 10x slotted holes, 5.2 x 12 mm, for individual mounting
- Compatible with T-groove aluminium frames measuring 20 x 20, 30 x 30, 40 x 40 mm
- Dimensions: 51.5 x 51.5 x 10 mm

34075...	Ident. No.	370 ●

DK fixturing systems - the entire world of fixturing systems
Modular system with over 1,000 pieces

Tactile measuring systems

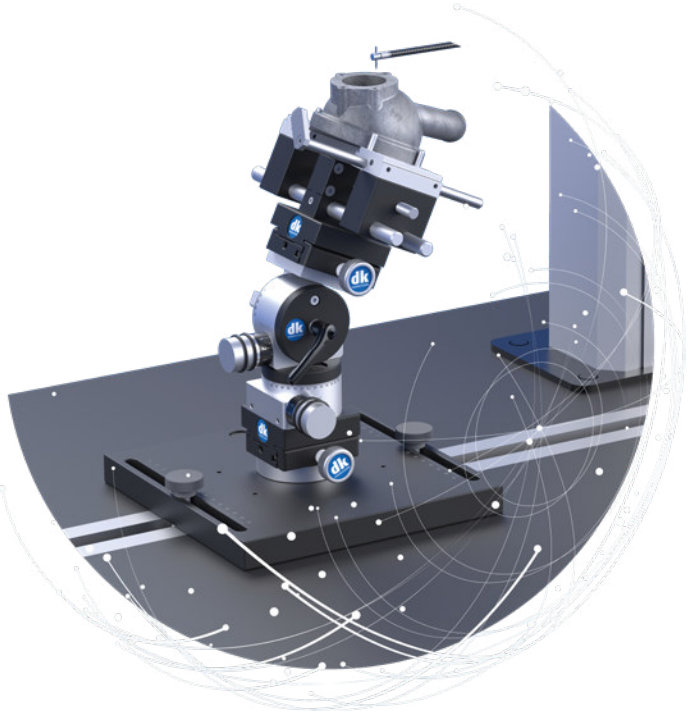
Optical measuring systems

Machine Vision and sensor

Surfaces and contour measurement

Computer tomography

3D scanning



The modular dk system clearly explained in less than two minutes:

Clamping equipment for all measuring technologies
Fixturing systems for all areas of measurement systems. Many elements of the DK programmes can also be used in different measuring technologies, i.e. on completely different measuring machines, and can be changed quickly using standardised interfaces. This offers substantial value.

Equipment immediately available
Modules are coordinated fast and with perfect accuracy. These are available as 3D models from DK, so that equipment can be easily designed using CAD and assembled immediately using the modular system.

Optimised costs
Retooling of the equipment in the event of exchange or end-of-life of the test specimen, process or measuring machine. High-strength aluminium with hard-coated surface makes the modules maintenance-free, corrosion-proof and wear-resistant. As a result, devices can be disassembled and reconfigured as often as required, resulting in optimal cost-benefit ratio.

Fulfilment of all process requirements
Safe, trouble-free and efficient processes thanks to a stable hold with little force applied to the test specimen, by repeatedly positioning identical parts on intelligent precision devices that can be adjusted as required and by performing the set-up operation outside of the measuring equipment using pallet systems.

Countless solutions
A wide range of fixturing programmes for different measuring systems with common standards and process-specific special features result in an outstanding range of components, which can be combined to realise nearly countless solutions due to the wide selection and combinability.

Perfect basis for special equipment
Decades of project experience form the ideal prerequisite for special equipment specific to parts and processes: Instead of having to create all parts of a fixture from scratch, we integrate cost-effective series parts and supplement them with custom-made parts. This results in the measurement of more parts per shift and more employees who are able to measure the parts. It goes without saying that we also provide 100 % customer-specific special solutions.

Prepared for automation
Interchangeable pallet systems or automated quick-change interfaces with any device carrier enable measuring processes to be automated. Compatibility with the fixturing programmes is always ensured. Our target: seamless integration of the measuring machine into the overall process.

Sustainability
No equipment generated from the DK system kit ever needs to be disposed of, since the system is based on a cycle that is outlined by our guiding principle: “Fast Reassembly Lifelong”.

dk fixation systems

Application:
For all application areas of measuring and testing systems, for 3D scanning and lasers as well as for industrial image processing and sensor technology.

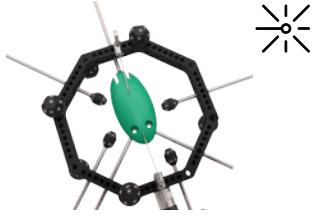
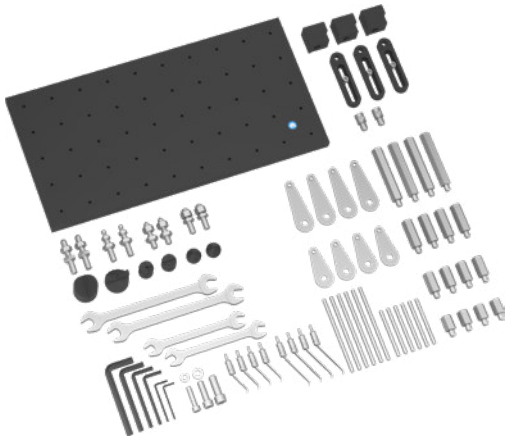
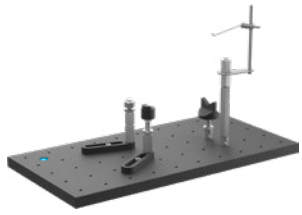
SCANNING



MACHINE VISION





Starter set:
Basic packages for the perfect introduction to the system worlds of the various application areas. Start immediately with the most important elements and expand to suit future requirements.

Intelligent composition:
Many years of experience by dk application engineers have resulted in a compact starter kit that already enables a number of common fixation devices. The sets are not only expandable as desired, but can also be combined with other dk programmes.

Economic start:
The starter sets are not oversized, but contain essential products for daily use. Their versatile combination options are the basis for a wide range of solutions.

Advantage:
Only buy what is actually used regularly in practice and keep costs in check.

SWA39 clamping set A3/A3+

for tactile measuring tasks

Application:
Starter set containing the most common clamping elements. Can be used in combination with a quick-action basic holder for zero-point clamping and fixing. The swivel unit enables free positioning of components in the three-dimensional space. This means that zero-point clamping is carried out with freely selectable spatial alignment and can be exactly reproduced over and over again for different components with the help of a scale.

Execution:
- 1x precision vice 80 mm (dk article number 308200)
- 4x parallel pins for vice jaws with straight contact surface (dk article number 307800)
- 4x parallel pins for vice jaws with inclined contact surface (dk article number 326600)
- 1x quick-action holding clamp set (dk article number M6 [285206], M8 [285208], M10 [285210], M12 [285212])
- 1x T-groove (dk article number 285300)
- **Ident. No. 000:**
  - Starter clamping set A3
  - 1x quick-action holding clamp swivel unit (dk article number 314010)
- **Ident. No. 002:**
  - Advanced clamping set A3+, same as starter clamping set A3 but with additional elements
  - 1x 314010 quick-action holding clamp swivel unit (dk article number 314010)
  - 1x precision three-jaw chuck 100 mm (dk article number 283220)
  - 1x contact set as depth stop for 100 mm jaw chucks with heights 5, 8 and 12 mm (dk article number 283255)

Spannfix ECO KMG M609 starter kit

for tactile measuring tasks

Application:
This universal starter kit is ideal for installing components for tactile measuring tasks, e.g. on 3D coordinate measuring instruments. The Spannfix ECO system is modular, can be expanded with additional components at any time and therefore offers maximum flexibility.

Execution:
- 1x SPANNFIX ECO base plate M6 WxDxH 500 x 250 x 20 mm with 50 mm grid (dk article number 395030)
- 3x clamping claw (dk article number 281440) + 3x M10 base rail 105 mm with M6 screw for base plate (dk article number 322010)
- 1x M10 hexagon column set AF 17, 4x 25 mm (dk article number 322200), 4x 35 mm (dk article number 322300, 4x 50 mm (dk article number 322400) and 4x 100 mm (dk article number 304400)
- 2x quick-change mount M10/SWA8 (dk article number 329500) + 2x 90° centring tips with quick-change mount SWA8, dia. 25 mm (dk article number 303700)
- 1x SWA8 flat supporting surface straight stop (dk article number 303810) + 1x SWA8 flat supporting surface for corner stop 40 mm (dk article number 303815) + 1x SWA8 V-shaped supporting surface 40 mm (dk article number 323400) + 1x SWA8 V-shaped supporting surface 8 mm (dk article number 323500)
- 2x M10 toggle locator to compensate for mould inclines ±15° (dk article number 323000) + 2x M10 moulded support with 90° tapered tip, dia. 10 (dk article number 322600) + 2x M10 moulded support with taper radius 5 mm (dk article number 322700)
- 4x each retaining plate for M6 columns 50 mm (dk article number 353700) and 75 mm (dk article number 353800) for mounting on M10 columns, toggle locators, moulded and quick-change mounts
- 6x each column dia. 6 with M6 thread 75 mm (dk article number 368300), 125 mm (dk article number 368500) for spring compressor or as stop, with hexagon socket + 4x each spring compressor dia. 6, 50 mm (dk article number 302800), 75 mm (dk article number 302900) self-locking and individually adjustable
- 3x M8 x 30 screw, 3x M10 x 30 screw and 3x M12 x 30 screw for adjustable clamp, 3x each washer for M8, M10 and M12 screws, 2x each open-end wrench AF 13/15 and 17/19, 1x each of hex key AF 2.5 for SWA8, AF 3 for round columns, AF 5 for base rails and AF 6, 8 and 10 for adjustable clamps
- 2x 3D central articulated arm with operating radius 170 mm, male thread M8 bottom/M6 top + 2x each thread adapter M6 male/M8 female for 3D central articulated arms (dk article number 275000), M6 male/M10 female for hexagon columns (dk article number 275010) and SWA8 male/M6 female for 3D central articulated arms (dk article number 246411)

Advantage:
- Quick-change system enables clamping elements to be used on different measuring machines, thus reducing costs

Basic set for contour and surface

for contour and surface measuring instruments

Application:
This starter set is ideal for mounting components for contour and surface measuring systems. Components can be freely positioned in three dimensions using centric clamping devices, quick-action holding clamps with swivel units and X/Y positioning tables.

Execution:
- 1x SWA39 positioning table with X/Y and 360° adjustment (dk article number 314440)
- 1x quick-action holding clamp swivel unit +90°/-55°(dk article number 314010)
- 1x clamping set for swivel unit (dk article number 314015)
- 1x precision centric clamping device 50 mm (dk article number 282150)

ATORN Measuring and control plates

Accuracy 0

Application:
For use in production and measuring as a basis for precise measuring tasks, e.g. height measuring devices

Execution:
- High-strength hard stone with dense structure, fine pores and high level of homogeneity
- Measuring surface with finest diamond-lapped finish
- Outside edges finely ground
- Edges chamfered for protection against damage
- Processing and positioning is performed at specific points
- **Ident. No. 040–063:** For direct mounting on table/workbench
- **Ident. No. 100, 120:** Section tube base frame
- **Ident. No. 105, 125:**
  - Floor unit with 3 fully extending drawers
  - Load-bearing capacity per drawer approx. 100 kg
  - Drawer height 120, 150 and 240 mm

Advantage:
- Distortion-proof
- Low thermal conductivity

Delivery:
Traceable works calibration certificate. DAkkS calibration certificate deliverable on request.

Measuring and control plates, more precise than DIN 876

Made from natural South African hard stone — Gabbro Impala

Application:
Ideal for use as a base for 1D/2D height measuring devices. Optionally available with T guide and clamping grooves or with thread inserts for a multitude of other measuring tasks requiring high basic accuracy.

Execution:
- untreated, not coloured, waxed or oiled
- non-rusting, alkaline, anti-magnetic
- optimum geometric dimensional stability
- Outer edges finely machined
- Edges chamfered for protection against damage
- underside with steel ball inserts, for statically correct storage on table bearings, individual supports and underframes
- Calibration certificate included in the scope of delivery. measurement results are based on national standards
- DAkkS calibration certificate available on request

- **No. 35444:** LAB accuracy: surface finely ground and lapped to maximum fineness
- **No. 35461:** DIN 876-1: Surface finely ground and lapped
- **No. 35462:** DIN 876-0: Surface particularly finely ground and lapped
- **No. 35466:** DIN 876-00: Surface finely ground and lapped

Advantage:
- carefully selected natural hard stone - Gabbro Impala - with superb properties
- naturally aged, for maximum dimensional stability

Delivery:
Calibration certificate.

Notes:
Measuring and control plates with other dimensions and accuracies upon request.

Base frame for measuring and control plates

In cabinet form

Application:
Sturdy underframe in cabinet form, for the secure placement of hard stone bases in production facilities and measuring rooms. The support and bearing fittings supplied allow simple and neat alignment of the hard stone plate using fine threads.

Execution:
- design for base length 600 or 800 mm with one storage compartment
- design for base length from 1000 mm with one storage compartment and one drawer
- steel support and bearing fittings with adjusting thread
- working height approx. 850 mm
- lockable hinged doors

Notes:
underframe with auto-levelling spring elements and/or vibration-damping spring elements deliverable upon request

Prod. Gr. 308

Concentricity tester

Application:
For measuring the axial and radial run-out precision of shafts.

Execution:
- Clamping table made from natural hard stone, flatness tolerance in line with DIN 876, precision 1. Adjustable 3-point table bearing rest with steel ball inserts.
- Tailstocks in high-quality, aged cast iron, right tailstock with movable sleeve (stroke 20 mm), adjusted using hand lever. Left tailstock with fixed sleeve. Finely ground surfaces.
- Centring points replaceable thanks to MT 2 socket with standard pressure fixture

Delivery:
1 clamping table, 1 measuring stand, 1 pair of tailstocks with a 60° MT 2 centring point

Technical data:
- Point height: 200 mm
- Max. point width: 650 mm
- Base plate length x base plate width: 1100 x 180 mm
- Groove width: 14 mm
- Weight: 135 kg

Concentricity test bench, without centre point

with disc brackets, height-adjustable

Application:
For rational testing of outer and inner surfaces of rotationally symmetrical parts during production and in measuring rooms.

Execution:
- Both disc brackets can be moved on the base plate
- Fixed in the required position using a lever
- To compensate for different diameters in the parts being tested, a height adjustment of max. 30 mm can be made to one bracket

Advantage:
- Play-free roller discs bearings guarantee concentricity tolerances of < 5 µm
- Workpieces can be easily rotated without force

Delivery:
Without measuring stand, without dial gauge

Prod. Gr. 378

Mahr PRECIMAR SM 60 and SM 60 V-5N small lengths measuring bench

Application:
Easy to operate small lengths test bench for quick, precise exterior measurements of workpieces.

Execution:
- 60 mm support table, continuously variable height adjustment
- Mount diameter for measuring instruments: 8 mm
- **Ident. No. 010:**
  - without spindle bore
  - Adjustable and fixable anvil and moving sleeve
  - Measuring force 1 N + measuring force of the measuring system
- **Ident. No. 020:**
  - Spindle bore 3.5 x 15.5 mm for interchangeable gauge slides
  - adjustable and fixable anvil and moving sleeve
  - Application scope of 60 mm with a measuring range of 25 mm
  - Measuring force 5 N + measuring force of the measuring system

Advantage:
- freely selectable measuring equipment, e.g. digital dial gauge, length measuring probe
- **Ident. No. 010:**
  - Quick adaptation to new workpieces
  - Built-in coupling to protect measuring equipment in use
- **Ident. No. 020:**
  - quick adaptation to new workpieces
  - built-in coupling to protect measuring equipment in use
  - flexible in application through use of different gauge slides

Delivery:
Ident. No. 020: incl. flat carbide gauge slides dia. 3.5 mm

Ident. No. 020

Mitutoyo 1D height measuring instrument QM-Height

manual measuring slide movement using handwheel

Application:
For measuring external, internal, height, depth and distance dimensions and inner and outer diameters.

Execution:
- Manual measuring slide movement using handwheel
- Clear control panel with high contrast display
- ABSOLUTE electronic linear scale
- **Ident. No. 010–020:** Without air cushion system
- **Ident. No. 030–040:** With air cushion system

Advantage:
- High-precision ABSOLUTE linear scale for position recording
- Automatic running of previously “learnt” parts programmes
- GO/±NG assessment after setting the upper and lower tolerances.
- Frequently used functions are immediately accessed at the touch of a button
- Long service life

Delivery:
Includes dia. 5mm ball probe, calibration block, 4 x batteries LR6 (AA) 1.5 V

Notes:
Relevant accessories are linked directly to each article on the online shop www.hahn-kolb.de.

Mitutoyo Linear Height LH-600F/LH-600FG height measuring instruments

with motorised measuring slide

Application:
For measuring external, internal, height, depth, step and distance dimensions on geometric elements with flat, plane-parallel and circular cylindrical surfaces. Measurement of diameters using automatic recording of the reversal point of bores and shafts. Recording of perpendicularity via connectable digital dial gauge

Execution:
- Motorised measuring slide movement
- 8.4 inch hybrid control panel with backlit keypad and colour touchscreen display
- Control panel can be tilted 0-40° and rotated -30-180°
- Bidirectional Digimatic S1 for wireless data transfer
- RS-232C connector enables connection to a receipt printer
- USB type B connections for PC and type A connections for flash drive

Advantage:
- Up to 30,000 measurement results per parts programme (max. 50 programmes)
- Preventive maintenance function e.g. status of the scale, calibration status notification
- Motorised measuring slide, can be moved 5-40 mm/s in 7 stages
- Adjustable air cushion for easy movement and for scanning measurements
- Very high level of accuracy ±(1.1 + 0.6 L/600) µm, L (in mm)

Ident. No. 115

Length measuring range (mm)			600

MAHR 816 CLT height measuring instrument

with motorised sampling

Application:
For measuring external, internal, height, depth and distance dimensions, as well as diameters and reversal points in bores and shafts. Also allows dynamic measurements.

Execution:
- 10 in control panel, tilting
- large function keys
- Data transfer: MarConnect (USB or wireless)
- Logging: PDF, BLE printer
- Measurement program creation: yes

Advantage:
- optical incremental measuring system with double reading head for outstanding precision
- dynamic probe system for high repeatability
- Air cushioning system for easy, smooth movement
- simple measuring processes due to the motorised measuring slide
- Temperature compensation via the integrated temperature sensor

Delivery:
Height measuring device including operating and display element, carrier 817 h1, gauge slide K6/51, setting block 817 eb, USB cable, operating instructions, charger, USB cable, protective cover, calibration certificate

Ident. No. 036

Digimar 817 CLT height measuring instrument

with motorised measuring slide

Application:
For measuring external, internal, height, depth and distance dimensions, as well as diameters and reversal points in bores and shafts. In addition, for a variety of measuring functions in two coordinate directions, such as recording dynamic straightness and perpendicularity deviations etc.

Execution:
- 10-inch touch control panel for simple, convenient operation via large operating keys
- Integrated dynamic thumbwheel for fast and precise positioning
- Ergonomic handles on both sides with integrated air bearing button for precise and effortless movement of the device on the measuring plate

Advantage:
- Fast and reliable execution of measurements and calculation functions
- Logs can be saved directly to the device as a PDF
- Wireless transmission of measured value lists to a Bluetooth(R) printer
- Transfers measured values via radio or USB using the proven and reliable MarConnect interface

Delivery:
Height measuring device including operating and display element, carrier 817 h1, gauge slide K6/51, setting block 817 eb, USB cable, operating instructions, charger, protective cover, calibration certificate

1D height measuring instrument TESA-HITE magna

IP55 protected measuring system for harsh workshop conditions, without air cushion activation

Application:

For measuring external, internal, height, depth and distance measurements, parallel deviations and inside and outside diameter using the Quickcentre dynamic function.

Execution:

- manual measuring slide movement using handwheel
- Large control panel 92x121mm with keypad and colour display
- Control panel IP65 splash-proof
- Integrated Li-ion battery 12.8 V 3 Ah, rechargeable
- Including SCS calibration certificate
- Measurement system IP55 protection against contact, dust and water

Advantage:

- Contextual help provides specific information and supports the user in performing measuring tasks
- Display of measurement result provides clarity with optimal readability (digit size 10x21mm)
- Quickcentre dynamic function for effectively determining dead centre points
- flexible data management, allowing for easy data export
- Best possible workshop compatibility thanks to IP55-protected measurement system

Length measuring range (mm)			415	715
Min./max. application area with standard gauge slide carrier			0-570 mm	0-870 mm
Digit increment (can be pre-selected)			0.001 mm | 0.005 mm | 0.01 mm	0.001 mm | 0.005 mm | 0.01 mm

TESA-HITE 1D height measuring instrument

with increased accuracy, with air cushion activation

Application:

For measuring external, internal, height, depth and distance measurements, parallel deviations and inside and outside diameter using the Quickcentre dynamic function.

Execution:

- manual measuring slide movement using handwheel
- Large control panel 92x121mm with keypad and colour display
- Control panel IP65 splash-proof
- Integrated Li-ion battery 12.8 V 3 Ah, rechargeable
- Including SCS calibration certificate
- Air cushion activation for easy movement

Advantage:

- Contextual help provides specific information and supports the user in performing measuring tasks
- Display of measurement result provides clarity with optimal readability (digit size 10x21mm)
- Quickcentre dynamic function for effectively determining dead centre points
- flexible data management, allowing for easy data export
- Air cushion system for easy movement on the measuring plate (at the push of a button)

Notes:

Optional accessories also enable testing of perpendicularity deviations.

Length measuring range (mm)			415	715

MICRO-HITE 2D height measuring instrument

manual measuring slide movement using handwheel

Application:
For measuring external, internal, height, depth and distance dimensions, drill holes and shaft diameters. The 2D function means that it can also be used to determine e.g. pitch circles and distances in 2D coordinate directions. Dynamic measuring processes with max., min. and max.-min. memory functions. Optional via TESA IG-13 measuring probe for perpendicularity, straightness and parallelism deviations.

Execution:
- **Ident. No. 030, 060, 090:** manual measuring slide movement using handwheel
- **Ident. No. 035, 065, 095:** manual measuring slide movement using handwheel and fine adjustment

Advantage:
- hybrid control panel allows “classic” operation via keyboard, as well as “modern” operation via touchscreen
- New Quickcenter technology simplifies the task of measuring bore holes and shaft diameters
- intelligent context menu supports the process by providing specific information and supporting the user while performing measuring tasks
- the measurement result display provides clear organisation of large amounts of information
- Air cushion activation for ease-of-movement

Delivery:
battery cartridge, charger (mains power supply adapter), standard gauge slide carrier, standard gauge slide with carbide ball ⌀ 5 mm, reference piece, SCS calibration certificate (DAkkS standard).

TESA µ-HITE 2D height measuring instrument

Application:
to measure external, internal, height, depth, step and distance dimensions, hole and shaft diameter, as well as for parallel, radial and axial runout tolerances. ideal for measuring small workpieces in production

Execution:
- modern hybrid control panel with touchscreen and keypad
- memory functions max., min., max-min. (for dynamic measurements)
- built-in temperature sensor
- data export using USB memory stick, TLC interface and via radio with optional accessories

Advantage:
- smart operator concept
- automatic detection of reversal point at holes and shafts
- motorised measuring head for safe and quick probing
- reset to zero at any position

Length measuring range (mm)		100
Min./max. application area with standard gauge slide carrier		0-160 mm

Perpendicularity measuring device

Micro-Square in set with TWIN T10 display and GT31 lever gauge probe

Application:
Fast and efficient perpendicularity measurement

Execution:
- Measuring column made of high-quality hard stone

Advantage:
- High-precision sliding guide enables a high degree of system accuracy
- Individual sliding properties thanks to adjustable contact pressure
- Stable base ensures excellent stability
- Suitable for use in workshops and very simple to operate
- Not dependent on connection to air or electricity

Delivery:
TESA MICRO-SQUARE, TWIN-T10 display, GT31 electronic lever gauge probe, key, SCS calibration certificate

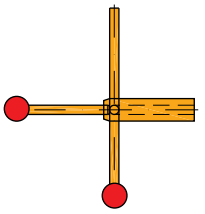
ORION® Measuring probe set, 3 pieces, with ruby balls

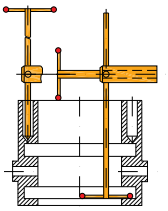
for height measuring instruments

Application:
For measuring grooves, recesses, offsets, cross holes etc.

Execution:
- Probes can be clamped axially and radially

Delivery:
With hexagonal screwdriver in a case





Number of pieces in assortment/set (PCS)		3
Composition of set		T-probe: Length 100 mm | 2 ruby balls diameter 2 mm | ball distance 18 mm | straight gauge slide: Length 100 mm | ruby ball diameter 6 mm | measuring probe holder: Overall length 63 mm

HELIOS-PREISSER Shaft tester

Ideal accessories for vertical height measuring instruments

Application:
For measurements in vertical and horizontal directions. Diameters and lengths can be measured from one clamping position. Saves multiple manual measuring aids when used with a height measuring device. Can also be used for testing radial run-out when used with a stand (see accessories). Taper angle and straightness of surface lines can also be measured.

Execution:
- Hardened steel measuring beam
- Vertical and horizontal contact faces arranged at 90°
- Vertical base plate with 3 hardened supporting surfaces (alignable)
- Moveable tailstock with hardened, ground clamping tip diameter Ø 16 mm x 60°
- Fixed centre tip Ø 24 mm x 60°, hardened and ground

Delivery:
Basic beam with fixed vertical base plate, fixed tip, Ø 24 mm, 1 centre cradle (without stand)

Technical data:
- Length: 670 mm
- Max. point width: 550 mm
- Point height: 75 mm
- Groove width: 10 mm
- Base plate length x base plate width: 200 x 120 mm
- Weight: 32 kg

BOSCH Laser distance meters
GLM

Application:
Ident. No. 027: For non-contact measurement of lengths, surfaces and volumes.
Ident. No. 031: for non-contact measurement of lengths, areas and volumes.
Ident. No. 152: For non-contact measurement of lengths, areas and volumes.

Execution:
- **Ident. No. 027:**
  - Measuring range 0.05 to 50 metres
  - Automatic shut-off: 5 min.
  - Easy to use due to the clearly arranged and illuminated display in combination with intuitive menu guidance
  - Robust design due to the unbreakable display, protected control panel and rubber housing
  - Better line visibility thanks to green laser technology
  - Bluetooth(R)™ 4.2 Low Energy data transfer
  - Laser diode 635 nm, < 1 mW
  - Laser colour red
- **Ident. No. 031:** Illuminated three-line display for optimal readability
- **Ident. No. 152:**
  - Digital viewfinder with zoom function for precision over long distances, outdoors and in complex environments
  - High-contrast IPS colour display for optimal readability
  - Integrated Li-ion battery for high flexibility and contribution to sustainability

Advantage:
- **Ident. No. 027:**
  - Fast and easy documentation of the measurement results using Bluetooth(R) and the new MeasureON app
  - Bluetooth(R) connectivity and the Bosch MeasureOn app make the documentation and transfer of data easy for a seamless workflow
  - Fast, reliable and extremely robust: laser rangefinder for rough construction sites
- **Ident. No. 031:**
  - fast and accurate measurement thanks to the visible laser target point
  - Very easy to operate with a single function key
  - Memory function allows easy access to last ten measurements
- **Ident. No. 152:** Quick and easy documentation and transfer of measurements via Bluetooth(R) to the new MeasureOn app, storage of images in internal memory and transfer of images via USB to PC

Delivery:
Ident. No. 027: GLM 50-27 C, 2 x AA batteries, protective case, Li-ion battery BA 3.7 V 1.0 Ah A
Ident. No. 031: 2x AAA batteries, protective case

Laserliner PocketCross-Laser 2G cross-line laser

Set incl. 150 cm crank-adjustable tripod

Application:
For simultaneous marking, levelling and alignment. With extremely bright green laser for high visibility. Extremely high line quality.

Execution:
- Individually selectable laser lines
- Green laser with 515 nm wavelength, approx. 6x brighter than typical red lasers with 630-660 nm wavelength. Can be used at temperatures from 0 °C to +50 °C
- GRX-Ready: When used with the optional laser receiver, the integrated hand-held receiver mode enables the laser lines to be detected at long distances and in poor lighting conditions.
- Automatic self-levelling; optical signals indicate when the device has moved outside of the levelling range
- Levelling range 3.5°, accuracy 0.3 mm/m
- Number of lasers: 1x horizontal 120°, 1x vertical 120°; visibility 55 m
- With 150 cm aluminium crank tripod

Delivery:
with 150 cm tripod, pocket wall holder, green magnetic target plate, laser glasses, Li-ion battery pack, mains power supply/charger with international adapter, USB-C cable, in case

BOSCH Multi-purpose line laser
GLL 3-80

Application:
for simultaneous marking, alignment and levelling in interior applications

Execution:
- app control possible
- reference lines visible in 360°
- **Ident. No. 032:** Simultaneous horizontal and vertical levelling

Advantage:
- **Ident. No. 032:**
  - Green laser lines offer up to four times better visibility than red lines
  - Dual Power Source technology: Can be operated with a 12V Li-ion battery or standard alkaline batteries
  - Controlling the tool on an app prevents inaccuracies

Delivery:
Ident. No. 031: Universal mount BM 1, 1 x battery 12 V/2 Ah, charger GAL 1230 CV, homing board, cloth bag, L-Boxx 136
Ident. No. 032: 1x 12 V/2 Ah battery, quick charger GAL 1230 CV, universal mount BM1, homing board, cloth pouch in L-Boxx

BMI Roll-up measuring tape

without housing

AO

Application:
For determining distances with mm accuracy and marking or transferring dimensions.

Execution:
- Stainless steel tape, painted white, unbreakable, durable
- Tape extends by itself, highly resistant to bending and dimensionally stable when rolled out
- Compact when rolled up, approx. 50 mm in diameter
- Thanks to the convex curvature, dimensions can be transferred very effectively

	Length (mm)	Width (mm)

VARIO, VARIO EC class 1, VARIO Mini

AO

Application:
No. 37014–37015: For measuring distances with mm precision
No. 37016: For measuring distances with an accuracy of mm

Execution:
- An especially lightweight and handy tape rule, specifically designed for professional use
- Housing made of impact-resistant polyamide (reinforced fibreglass)
- Axle and tape outlet with TRIBOCOMP® (Teflon) coating, result: smooth and easy tape movement
- Smooth-running sliding button for locking the tape
- Wear-resistant and anti-reflective tape
- Recoilless tape feed
- **No. 37015:** Miniature version, housing just 50 x 50 x 20 mm
- **No. 37016:** In EC class 1, with increased scale accuracy

ATORN Steel rules
with millimetre and inch scales

AJ

NEW

Application:
For determining lengths, as a tool for scribing and marking off

Execution:
- Made of stainless spring steel
- Small cross-section for flexible design
- All edges ground and burr-free
- Anti-glare, matt surface
- Graduations insensitive to many chemicals, greases and oils
- Two graduations over the entire length: Scale graduation of 1/16 inch at the top and 1 mm at the bottom
- With partial fine graduations of 1/32 inch, 1/64 inch and 0.5 mm in the initial range of the graduation

Advantage:
- Conversion of measurements from the metric to the imperial system and vice versa
- Fine graduation in the initial range for more precise readout and marking

Technical data:
- Accuracy class: II

Steel rulers

In accuracy classes II, I and 0

CG

Version:
- Rectangular cross-section
- Test surfaces finely polished
- Straightness of test surfaces according to DIN 874
- **Accuracy class II:** Top edges finely polished, flat sides sanded
- **Accuracy class I:** Top edges finely polished and calibrated, flat sides precision-ground. Rulers up to 1,500 mm feature a rectangular, rules above 2,000 mm a double-T cross-section and 2 hand slots
- **Accuracy class 0:** High-precision version: top edges and flat sides precisely machined, polished and calibrated. Rulers up to 1,500 mm feature a rectangular, rules above 2,000 mm a double-T cross-section and 2 hand slots

Advantage:
- **No. 37420 050-37420 200, 37450 050-37450 200:** Test data engraved directly on the ruler

Laserliner Travel counter

Application:
For measuring long distances, e.g. open spaces, paths, rails etc., including curves

Execution:
- Adds when moving forwards, subtracts when moving backwards
- Brake and zero setting directly on the handle
- **Ident. No. 090:** mechanical digital display 0.1-9,999.9 m, reading 0.1 m, wheel circumference 0.5 m

- **Ident. No. 100:** mechanical digital display 0.1-9,999.9 m, reading 0.1 m, wheel circumference 1 m
- **Ident. No. 110:** Electronic digital display 0.01-9,999.99 m, reading 0.01 m, wheel circumference 1 m

Advantage:
- Compact folding design for transport
- **Ident. No. 090:** Small wheel for measuring right up to obstacles and walls

EXTENDED PROGRAM

- **Ident. No. 100–110:** Hold function for locking the measured value

Measuring wheels for metre counters

Application:
Measuring wheels with 200 mm circumference, suitable for M45 metre counter.

Execution:
- Different tread textures are suitable for measuring lengths on different materials
- 200 +/-0.2 mm circumference
- Moment of inertia 310 gcm²
- Aluminium core material
- Material and texture of the tread depend on the version
- Aluminium/knurled: Cardboard, wood, textiles, rubber, soft plastic
- Polyurethane/smooth: greased metals, steel profiles, painted surfaces, plastics, papers, cardboard, wood, textiles, wire, leather
- Polyurethane/nubbed: coarse textiles, carpet, cable measurement, non-woven fabric, paper, cardboard, wood, plastics
- Polyurethane/grooved: Ungreased metal, painted surfaces, plastics, paper, cardboard, wood, textiles, glass, flooring

Spindle position indicators OP3

Application:
For monitoring and setting linear or angular movements performed by adjusting spindles. For setting machine spindles and production systems. The display is chosen according to the spindle pitch and diameter.

Execution:
- Impact-resistant and self-extinguishing housing made of technopolymer
- Magnifier for improved readability
- Hollow shank internal diameter 14 mm H7

Advantage:
- Simple installation, even when retrofitting to existing spindles
- Quick replacement - especially beneficial for quick material changes and small batch sizes
- Reduced downtimes and increased system availability

Technical data:
- Colour: Black
- IP protection class: IP 64
- Number of digits: 4 PCS
- Max. display value: 9999
- Adapter diameter: 14 mm

Spindle position indicators OP7

Application:
For monitoring and setting linear or angular movements performed by adjusting spindles. For setting machine spindles and production systems. The display is chosen according to the spindle pitch and diameter.

Execution:
- Impact-resistant and self-extinguishing housing made of technopolymer
- Magnifier for improved readability
- Hollow shank internal diameter 20 mm H7

Advantage:
- Simple installation, even when retrofitting to existing spindles
- Quick replacement - especially beneficial for quick material changes and small batch sizes
- Reduced downtimes and increased system availability

Technical data:
- Colour: Black
- IP protection class: IP 64
- Number of digits: 5 PCS
- Max. display value: 99999
- Adapter diameter: 20 mm
- Width x depth x height: 48 x 27.75 x 66 mm

ORION® Bevel gauge
with flexibly adjustable blade

Application:
For setting and transferring an angle, e.g. from a part to a mitre saw, or from a reference to a component.

Execution:
- Arm made of anodised aluminium, painted steel blade
- Arm serves as stop and angle divider
- Blade can be clamped by wing nut

Advantage:
- Folding for transport and storage
- Flexible adjustment by means of a slotted hole in the blade
- The 45° tip makes it particularly easy to halve 90° angles
- A 180° angle may be divided as desired and both sections transferred simultaneously by positioning the arm of the bevel gauge in the middle

Limb length x limb length 2		250 x 150 mm
Cross-section length x cross-section width		40 x 2 mm
Cross-section length 2 x cross-section width 2		40 x 14 mm
38200...	Ident. No.	025 ●

Prod. Gr. 3BG

BMI Adjustable mitre try and carpenter square
8-in-1 model

Application:
For setting a fixed angle 0°, 22.5°, 45°, 67.5°, 90°, 112.5°, 135° or 157.5°

Execution:
- Permanent accuracy +/- 0.05° = 1 mm/m
- Arm made of anodised aluminium, blade made of stainless steel
- Scales etched on both sides

Advantage:
- Folding for transport and storage
- Fixed detent positions do not require a reference for adjustment
- Replaces multiple fixed angles, ideal for a tool bag

Limb length x limb length 2		200 x 80 mm	300 x 120 mm	400 x 150 mm

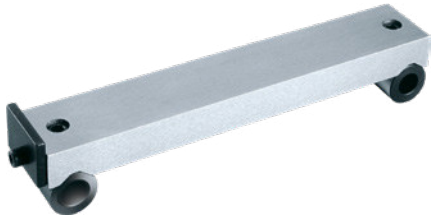
TESA Sine bar

EXTENDED PROGRAM



Application:
For precise setting of an inclined reference surface from 0 to 60°. The sine function is used to determine the angle to be set based on linear dimensions, i.e. based on gauge blocks.

Execution:
- Made from hardened gauge steel
- With front-face stop, removable
- Two rollers form the axis points for the reference surface and gauge blocks
- The required combination of gauge blocks is calculated based on the centre distance of 127 mm multiplied by the sine (alpha) of the desired angle.

Notes:
Gauge blocks not included

Type		Sine bar 0 to 60 degrees
Axial spacing (mm)		127
Measuring surface width x Measuring surface depth		123 x 25 mm
38002...	Ident. No.	510 ○

Prod. Gr. 362

ATORN Spirit levels with magnetic base

made of light metal

P

Application:
For horizontal and vertical alignment of objects

Execution:
- Laser-scaled horizontal round vials
- Read off 2% inclines
- Magnifying effect for improved reading
- 270° view of bubble from all positions without any interfering edges
- Made from high-strength non-breakable polycarbonate
- Strong aluminium rectangular profile
- Scratch-proof thanks to special anodising treatment
- Rubber end caps for impact protection
- **No. 38291:** Magnetic base

Advantage:
- Silicone pads on rear side surface for non-slip positioning on walls
- Additional divisions for exact 0-position of bubble in the horizontal vial for precise reading (zero-point deviation in normal position: 0.5 mm/m)
- **No. 38290 080–38290 120:**
  - Scale printed on upper measuring surface
  - 2 sliding measuring and marking-off tabs

BMI Spirit levels

with unbreakable, barrel-shaped perspex vials

Application:
For horizontal and vertical alignment of an object

Version:
- With unbreakable, barrel-shaped perspex vials
- **BMI compact and hard wood model:**
  - Made of compact and hard wood for minimal heat conduction
  - oiled and kiln-dried
- **BMI Eurostar model:**
  - Made from reinforced square profile
  - Non-glare round spirit levels with magnifying effect
  - Reads 2 % gradients
- **BMI Alustar model:**
  - Made of strong, rectangular aluminium profile
  - Scratch-proof thanks to special anodising treatment
  - 1 additional rotating vial for reading the angle in degrees and %

BMI Spirit levels

with ultrasonically welded vials and non-glare reading

Application:
For horizontal and vertical alignment of an object

Version:
- With ultrasonically welded vials and non-glare reading
- Reverse measuring possible (0.5 mm/m)
- Solid body and shock-absorbing rubber end caps maintain high measuring precision
- **BMI Superstar model:**
  - Round horizontal vial with magnifying effect
  - Two magnets in the underside, four magnets from 150 cm length
- **BMI Robust model:**
  - Two milled measuring surfaces up to 200 cm
  - Extremely torsion-resistant due to multi-chamber profile
- **BMI Superstar model:**
  - Round horizontal vial with magnifying effect.

Advantage:
- Edgeless horizontal vial for undistorted view of bubble
- Life-long high measuring accuracy (0.5 mm/m)

BMI Spirit levels
with increased precision

Application:
For horizontal and vertical alignment of an object

Version:
- Round vial for glare-free reading
- Vial installation accuracy 0.3 mm/m in normal position
- Four-chamber profile, extremely torsion-resistant
- Effective additional protection due to shock-absorbing rubber end caps
- Length 600-1,200 mm with 1 handle
- Length 1,800 and 2,000 mm with 2 handles
- **Model: BMI Highprecision with magnet:**
  - With magnets in underside

Advantage:
- The vial bubbles travel a longer distance than those in conventional spirit levels at the same angle of inclination. This makes inaccuracy visible more quickly
- Life-long high measuring accuracy (0.3 mm/m)

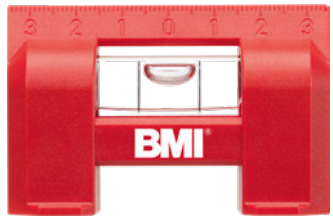
BMI Socket spirit level
E-LEVEL model

Application:
For aligning flush-mounted sockets/switches during assembly For aligning tiles, panels etc.

Execution:
- Model BMI E-LEVEL
- Made of impact-resistant plastic with acrylic glass vial
- Measurement accuracy 1.0 mm/m.
- High contrast vial, edges of bubble appear red
- Housing with built-in clearance for sockets
- With magnet

Advantage:
- Spirit level stays on socket plate by itself. This means you keep both hands free.
- High contrast within vial makes reading in poor lighting conditions significantly easier.
- With +/- 35 mm scale, allowing simultaneous measuring, centring and marking

Delivery:
in blister packaging



Length (mm)			70

BMI Spirit levels with magnet

Application:
For horizontal and vertical alignment of objects

Execution:
- **Ident. No. 010:**
  - Made of highly impact-resistant plastic, with 2 high-adhesion disc magnets on the underside
  - 3 unbreakable plexiglas bubble vials for 0°, 45° and 90°
- **Ident. No. 020:**
  - Round horizontal bubble vial with magnifying effect
  - Edgeless horizontal spirit level for undistorted view of bubble even during reverse measuring
  - Reverse measuring possible (0.5 mm/m)
  - Solid body and impact-resistant rubber end flap maintain high measuring precision
  - With internal magnet

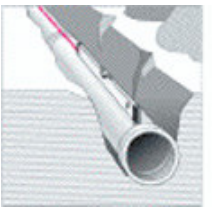
Laser spirit levels

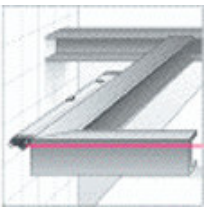
Application:
For precise alignment of objects

Execution:
- Laser beam range (wavelength 635 nm) up to 50 m
- Milled test surface
- Hybrid laser module (maximum impact-resistance) is dust-proof and splash-proof

Delivery:
Batteries in sturdy plastic tubes

Technical data:
- Coverage distance: 50 m
- Spirit level error limit: 0.25 mm/m
- Material: Aluminium





Length (mm)		333	800
38328...	Ident. No.	040 ●	080 ●

Prod. Gr. 384

Electronic digital box inclinometer
with integrated spot laser

Application:
For measuring in the horizontal (as with a spirit level) or in any other direction (as with an inclinometer)

Execution:
- Length of test face: 400 mm
- Zero point deviation of horizontal bubble vial in normal position: 0.25 mm/m
- Parallelism deviation of laser beam to test face: 0.25 mm/m
- Laser class 2
- Laser wavelength 635 nm
- Laser power < 1 mW
- Range approx. 50 m
- Digit increments 0.1° or 0.1%
- Error limit 0° and 90° = 0.05° intermediate dimensions = ±0.2°
- 8 h continuous light

Delivery:
With batteries (1x E-Block 9 V type 6LR61) in sturdy plastic tubes

Technical data:
- Length x width x height: 443 x 40 x 70 mm

38446...	Ident. No.	015 ●

Prod. Gr. 383

Laser spirit level with digital level inclinometer functions
DigiLevel Pro and DigiLevel Laser models

Application:
For detecting and measuring inclinations, aligning objects.

Version:
- Milled measurement surfaces with holding magnet on the underside
- An acoustic signal is output at 0°, 45°, 90°, 135° and 180° for easy alignment of objects
- Inclination memory for precise duplication of angles
- Illuminated flip display, auto-rotation when measuring overhead
- Calibration function for recalibrating the sensor and improving measurement reliability
- Hold function
- With additional vertical and horizontal vial with accuracy of +/-0.5 mm/m
- **Ref. no. 030-040** DigiLevel Laser:
  - Accuracy of electronics: +/-0.1° at 0° to 1° and 89° to 90°; +/-0.2° in the remaining range
  - With green point laser as an optical extension for duplicating heights and angles
- **Ref. no. 050-090** DigiLevel Pro:
  - Digital connection and free MeasureNote app for rapid data transfer to a mobile device
  - Accuracy of electronics: +/-0.05° at 0° to 1° and 89° to 90°; +/-0.1° in the remaining range
  - With red point laser as an optical extension for duplicating heights and angles

Advantage:
- **Ref. no. 030-040:** Green laser approx. 6x brighter than comparable red laser, therefore more visible

Scope of delivery:
including batteries (2x AAA), in transport bag

Technical data:
- Spirit level error limit: 0.5 mm/m
- Number of laser markings: 1-point
- Laser category: 2

ATORN Electronic digital box inclinometer

RD

Application:
For easy and rapid measurement of inclinations

Execution:
- Display in degrees, mm/m or percentages
- Readouts in 0.05°, 0.01°/IN/FT, 0.1°, 0.1 % or 1.0 mm/m
- Arrow in display shows direction of gradient
- Different beeps for approaching left and right versus horizontal and vertical
- Hold function
- Intermediate angles can be defined as reference angles (0-point)
- Measurement accuracy at 0° and 90°: ± 0.05°
- Measurement accuracy at 1° to 89°: ± 0.2°

Advantage:
- Very long operating time due to large battery capacity
- Display with backlight
- optical and acoustic signals

Delivery:
Battery (1x E-Block 9 V type 6LR61) in sturdy plastic tube

Technical data:
- Length x width x height: 256 x 50 x 60 mm

38445...	Ident. No.	100 ●

Prod. Gr. 383

ORION® Electronic digital box inclinometer

RD

Application:
For easy and rapid measurement of inclinations

Execution:
- Display in degrees
- Arrow in display shows direction of inclination
- Simple adjustment in normal position (reset)
- Hold function
- 0.05 ° digit increment
- Error limit 0.5°
- Large LCD display

Advantage:
- Adhesive magnets on 3 sides
- Rotating display for overhead measurements

Technical data:
- Material of housing: Aluminium anodized
- Length x width x height: 57 x 30 x 57 mm

38600...	Ident. No.	100 ●

ORION® Electronic digital box inclinometer

RD

Application:
For easy and rapid measurement of inclinations

Execution:
- Display in degrees or percentages
- Arrow in display shows direction of inclination
- Simple adjustment in normal position (reset)
- Hold function
- Made from hard-anodised light metal
- Base with narrow V-shaped recess for attachment to shafts
- 1 base with adhesive magnets
- Digit increments 0.1° or 0.1%
- Error limit 0° and 90° = 0.1° intermediate dimensions = 0.2°

Advantage:
- Short and compact shape
- Rotating display for overhead measurements

Delivery:
With battery (1 x 3 V lithium type CR2032) and holster

Technical data:
- Length x width x height: 151 x 35 x 60 mm

Laserliner Electronic digital box inclinometer

DigiLevel Compact model

Application:
For detecting and measuring inclinations, aligning objects.

Execution:
- milled measurement surfaces with holding magnet on the underside
- An acoustic signal is output at 0°, 45°, 90°, 135° and 180° for easy alignment of objects
- Inclination storage for precise duplication of angles
- Illuminated flip display, auto-rotation when measuring overhead
- Digital Connection interface and free MeasureNote app for rapid data transfer to a mobile device
- Calibration function for recalibrating the sensor and improving measurement reliability
- Hold function
- Accuracy of electronics: +/- 0.05° at 0° to 1° and 89° to 90°; +/- 0.1° in the remaining range
- With rubber end caps for impact protection

Delivery:
including batteries (2x AAA), in transport bag

Technical data:
- Measuring range of inclinometer: 0 - 360° (4 x 90°)

Prod. Gr. 3EE

Electronic digital box inclinometer

CLINOBEVEL 1 USB

Application:
For fast and easy measurement of inclines using absolute and comparative measuring procedures

Execution:
- 4 precisely machined measuring bases
- Splash-proof housing (IP65)
- USB interface
- Selectable units of measure: Degrees (2 dec.), degrees/min., mm/m (2 dec.), inch/10 or 12 inch (4 dec.), mm or inch/rel. basis (optional), millira-dians and others
- Battery operation
- Measuring range +/- 45°
- Error limit: 2' + 1 digit increment
- Digit increments: 0.02 mm/m
- Includes USB data cable and software

Delivery:
Inclinometer incl. Battery (1x1.5 V type AA), USB data cable, Clinosoft software, in a case

Technical data:
- Type: TESA CLINOBEVEL 1 USB
- Length x width x height: 100 x 35 x 75 mm

Prod. Gr. 366

CLINOBEVEL 3 SQUARE electronic digital box inclinometer

with and without SCS calibration certificate

Application:
For quickly and easily measuring inclines and per-pendicularity, as well as checking straightness and flatness using absolute and comparative measure-ment processes.

Execution:
- Housing design in nickel-plated grey cast iron, stainless
- Four precisely machined measuring surfaces, two with prism for cylindrical surfaces dia. 30-100 mm
- high-contrast colour display with a choice of four different background colours
- Integrated transverse vial for easy alignment of the vertical axis to avoid twist errors
- Wooden handle for heat protection

Advantage:
- different display configurations, e.g. level or bargraph
- Android app for displaying the measured values on devices such as smartphones
- Four measuring surfaces ensure quick and precise control of the parallelism of parts

Delivery:
with 2x batteries type LR14 (Baby C, alkaline), 2x calibration pins (60 degree models only), instruc-tions, SCS certificate (38448070 and 38448075 only), in robust transport case

Notes:
The models with measuring difference ±60° can also be calibrated using the two calibration pins supplied.

Technical data:
- Selectable units: DEG | mm/m | "/10" | "/12" | mRad | mm/REL | "/REL A%o | %o | GON
- Data transmission type: USB | Wireless | RS 485
- Material of housing: Grey cast iron
- Surface of the housing: Nickel plated
- Colour of housing: Silver grey
- Length x width x height: 160 x 40 x 160 mm
- Functions: Hold-function (AE lock) | Calibration | Set absolute zero | Set relative zero | Limit function | Remote display via app

TESATRONIC TWIN-T10 electronic display unit

Mobile display unit for TESA electronic half-bridge length measuring probes

Application:
Mobile electronic display unit for mains-independent measurement display from electronic half-bridge length measuring probe.

Execution:
- Large, high-contrast display, 66 x 57 mm
- Combined scale and digital display
- 1 measuring probe input for single measurement function
- Maximum value, minimum value, maximum and minimum value
- Degree of protection IP 63

Advantage:
- Mobile display unit with combined scale and digital display
- Temporary 5x zoom of the displayed scale interval

Delivery:
Operating instructions, 4 x LR6 AA batteries, 1x stencil for classification

Electronic display units TESA TWIN T20

For TESA electronic length measuring probes + further measuring instruments (USB)

Application:
State-of-the-art touchscreen display unit for simultaneous display of several measured values. Connections are available for inductive TESA length measuring probes and USB connections for other measuring instruments. Ideal for production facilities and measuring rooms.

Execution:
- Modern 7" colour touchscreen display with high display quality
- dynamic measurements (min, max, max-min, average etc.)
- Formulas: +A, -A, +B, -B and combinations of A and B
- adjustable tolerances with OK/NOK display
- integrated classification function (max. 8 classes, coloured), NEW: also with nominal values
- Measured value displays: 2; measurement programmes: 2; sequences: 2
- Connections: 2x TESA length measuring probes (half bridge), 2x TESA digital length measuring probes, 1x TESA BUS, 2x USB-A
- Data output via RS232, USB or Bluetooth(R)
- 3 switches that are adjustable in parallel: 1x touchscreen function key (NEW), 2x switch inputs (for 1x USB switch, 1x jack plug switch; switches must be purchased separately)
- available languages: DE, FR, IT, EN, KO, ZH, ES and JP

Advantage:
- 4 display modes allow for optimal measurement display.
- Automatic detection of connected inductive length measuring probes
- 4300 measurements/second for dynamic measurements
- simultaneous display of up to two measurements
- Other connection options: Modbus; via TESA module: digital I/O switching modules to controllers, 2 additional probe inputs; ASCII commands; driverless keyboard signals

Notes:
Optional accessories: Pen with pen holder 39640025, hand switch with jack plug 39640030, foot switch with jack plug 31171350, USB foot switch 39640032, TLC USB cable 39852210, TLC Bluetooth(R) transmitter 39852240

Technical data:
- Model: TWIN-T20
- Measuring range of electronic length measuring technology: +/- 5000 µm
- Digit increment, electronic display unit: 0.1 µm
- Compatibility length measurement scanner: TESA
- Data transmission type: TLC | USB | RS232
- Energy supply: Cable

TESA TWIN T40 electronic display units

for TESA electronic length measuring probes + further measuring instruments (USB)

Application:
State-of-the-art touchscreen display unit for simultaneous display of several measured values. Connections are available for inductive TESA length measuring probes and USB connections for other measuring instruments. Ideal for production facilities and measuring rooms.

Execution:
- state-of-the-art 7-inch colour touchscreen display with high display quality
- dynamic measurements (min, max, max-min, average etc.)
- Formulas: +A, -A, +B, -B, +C, -C, +D, -D, combinations of A, B, C, D, advanced mathematical formulas
- adjustable tolerances with OK/NOK display
- integrated classification function (max. 16 classes, coloured), NEW: also with nominal values
- Measured value displays: 4; measurement programmes: 4; sequences: 4
- Connections: 4X TESA length measuring probes (half bridge), 1x TESA-BUS, 4x USB-A
- Data output via RS232, USB or Bluetooth(R)
- 3 switches that are adjustable in parallel: 1x touchscreen function key (NEW), 2x switch inputs (for 1x USB switch, 1x jack plug switch; switches are to be purchased separately)
- available languages: DE, FR, IT, EN, KO, ZH, ES and JP

Advantage:
- 4 display modes allow for optimal measurement display.
- automatic detection of connected inductive length measuring probes
- 6,500 measurements/second for dynamic measurements
- simultaneous display of up to four measurements
- Other connection options: Modbus; via TESA module: digital I/O switching modules to controllers, 4 additional probe inputs; ASCII commands; driverless keyboard signals

Notes:
Optional accessories: Pen with pen holder 39640025, hand switch with jack plug 39640030, foot switch with jack plug 31171350, USB foot switch 39640032, TLC USB cable 39852210, TLC Bluetooth(R) transmitter 39852240

Technical data:
- Model: TWIN-T40
- Measuring range of electronic length measuring technology: +/- 5000 µm
- Digit increment, electronic display unit: 0.1 µm
- Compatibility length measurement scanner: TESA
- Data transmission type: TLC | USB | RS232
- Energy supply: Cable

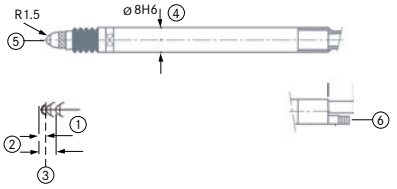
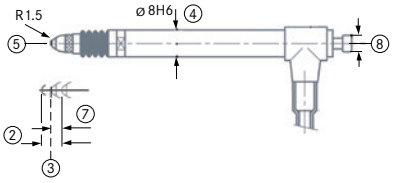
Prod. Gr. 365

Electronic length measuring probes — basic terms

Nitrile gaiter for standard applications
Viton gaiter for applications involving coolants and lubricants
Connection nipple fixed or adaptable for vacuum measuring pin retraction or compressed air measuring pin adjustment



Measuring probe without/with micrometer bolt lift-off using vacuum



Measuring probes with micrometer bolts operated using compressed air

① Front end position of measuring pin
② Max. measuring pin travel
③ Electr. zero point
④ Clamping shank (sensor housing)
⑤ Gauge slide
⑥ Connection for pneum. measuring pin retraction
⑦ Adjustment to electr. zero point
⑧ Connection for compressed air measuring pin retraction

Electronic length measuring probes with half bridge

Universal length measuring probe for a variety of standard applications

Application:

Ident. No. 021–028, 321–325: For a wide variety of standard applications in multi-point measuring technology. Can also be used as an alternative to dial gauges or precision pointers in manual measuring instruments such as internal precision measuring instruments, precision pointer snap gauges, etc.

Ident. No. 211–272: For a wide variety of standard applications in multi-point measuring systems. Can also be used as an alternative to dial gauges or precision pointers in manual measuring instruments such as internal precision measuring instruments, precision pointer snap gauges etc.

Execution:

- Precise, ball-guided measuring pin
- Mechanical or vacuum lifting of measuring pins, depending on version
- **Ident. No. 021–028, 321–325:**
  - Clamping shaft diameter 8 mm can be clamped along entire length
  - Cemented carbide gauge slide M2.5 with 3 mm ball diameter
  - 5-pin plug in line with DIN 45322, cable length 2 m
- **Ident. No. 211–272:**
  - Clamping shank diameter 8 mm, can be clamped along entire length
  - Carbide gauge slide M2.5 with ball diameter 3 mm
  - 5-pin plug in line with DIN 45322, cable length 2 m

Advantage:

- Insensitive to lateral forces and temperature fluctuations
- Excellent electromagnetic shielding
- **Ident. No. 211–272:** Pack of 10 with price savings

Delivery:

Ident. No. 021–028, 321–325: Measuring probe, test report with declaration of conformity
Ident. No. 211–272: 10x measuring probes, test report with declaration of conformity

Notes:

TESA check; Also available in a DC version with +/- 15 V or 0-24 V power supply and analogue DC output on request and for an extra charge

TESANORM clamping system

For electronic length measuring probe, dial gauges and precision pointers with 8h6 shaft diameter

Application:

No. 39517: For mounting electronic length measuring probes, dial gauges and precision pointers with a shank diameter of 8 mm h6 in measuring devices.

No. 39536–39537: For mounting electronic length measuring probes, dial gauges and precision pointers with a shaft diameter of 8 mm h6 in measuring devices.

Execution:

- Tension using VKD clamping screw and VKE clamping sleeve
- Bore diameter 10H7 for holding the VKE clamping sleeve
- **No. 39517:**
  - VKD clamping screw M4 x 6 with offset diameter 1.5 mm and length 0.7 mm
  - VKE clamping sleeve diameter I = 8 mm and A = 10 mm and length 12 mm
  - The measuring instrument can be positioned horizontally to the reference surface. Distance of 28 mm between the reference surface and the centre of the measuring pin
- **No. 39536–39537:**
  - VKD clamping screw M4 x 6 with offset diameter 1.5 mm and length 0.7 mm
  - VKE clamping sleeve diameter I = 8 mm and A = 10 mm and length 12 mm

Advantage:

- **No. 39517:**
  - slotted clamping sleeve for uniform surface tension across the sleeve surface
  - no deformation of the micrometer bolt guide
- **No. 39536–39537:**
  - Slotted clamping sleeve for uniform surface tension over the sleeve surface
  - No deformation of the micrometer bolt guide

TESA Electronic lever gauge probes

GT 31 series

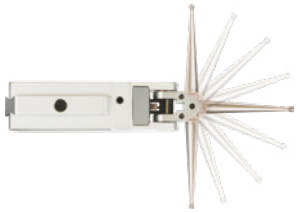
Application:
Adjustable angle lever gauge probes, suitable for measurements in two directions. Ideal for parallel and straightness measurements as well as for measuring tasks on both sides

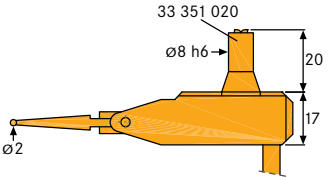
Execution:
- Lever system mounted on cones and counter-balanced
- Removable gauge slide with cemented carbide probe ball
- Probe can be swivelled by 180°
- Housing with two dovetail strips
- Includes clamping shaft diameter 8 mm
- 5-pin plug in line with DIN 45322, cable length 2 m

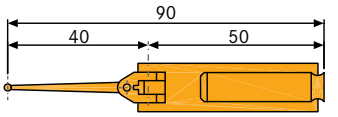
Advantage:
- Two slip couplings for collision protection
- Automatic probe direction reversal with constant display reading

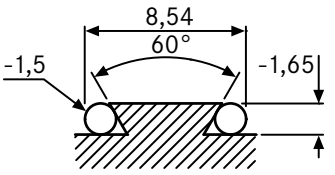
Delivery:
Measuring probe, clamping shaft diameter 8 mm, declaration of conformity

Technical data:
- Model: GT 31
- Max. spindle travel: 0.7 mm
- Sensor arm length: 40 mm
- Measuring span of electronic length measuring technology: 0.6 mm
- Measuring range of electronic length measuring technology: +/- 0.3 mm
- Max. linearity error (L in mm, measured from electric zero point): 0.2 µm + (50 x L^2) µm
- Repeat accuracy: 0.1 µm









Measurement force (N)		0.02	0.1	0.2

Prod. Gr. 362

TESA FMS electronic length measuring probe

With parallel guide

Application:
suitable for applications in multipoint measuring technology. the compact design permits the close arrangement of multiple FMS length measuring probes next to each other.

Execution:
- Precise, ball-guided measuring movement
- Compact design, designed for continuous use
- Effective direction of measuring force and lifting based on selected accessories
- 5-pin plug in line with DIN 45322, cable length 2 m
- Version with IP54 degree of protection, splash-proof
- axial or radial cable outlet can each be swivelled by 45° in both directions

Advantage:
- Parallel-guided length measuring probe for tight spaces, e.g. inside devices
- Design saves many mechanical structural elements
- Extensive range of accessories for a wide range of individual measuring tasks

Delivery:
Measuring probe, test report with declaration of conformity

Notes:
Standard measuring force 2 N, other measuring forces via interchangeable spring elements

Prod. Gr. 3MA

Radio receiver i-Stick

for MAHR and ATORN measuring instruments with Integrated Wireless

Application:
For wireless transmission of measurement data in conjunction with measuring devices with integrated wireless.

Execution:
- Bidirectional communication
- Range max. 6 m
- number of ducts: 3
- number of radio receivers connectable to PC: 4 pieces

Advantage:
- Each i-Stick can connect up to eight measuring instruments to MarConnect/ATORN
- Secure data transfer via reverse channel

Delivery:
MarCom Standard software, driver CD

Notes:
compatible e.g. with ATORN pocket Vernier calliper 31181001-002, digital vernier callipers MarCal 16 EWRi, digital depth callipers 30 EWRi, digital dial gauges MarCator 1086 Ri, 1087 Ri and 1087 BRi

USB keyboard interfaces

with integrated data cable (instrument side)

Application:
The USB interface simulates the manual input of measured values via a USB keyboard enabling wireless, software-neutral data transfer to a PC. Measured values can be transferred directly to EXCEL or other word processing programs or statistical programs, for example.

Execution:
- Power supply via USB interface
- USB interface is detected as a keyboard
- Closing characters such as Enter or Tab can be set on the USB interface. These are automatically sent together with the data.
- Language, separator settings etc.
- Data transfer via data button on the measuring instrument or using a timer
- Timer function can be set from 0–99 seconds for the transmission of measured values within a specified time interval
- **Ident. No. 210:** For measuring instruments with OptoRS232 connection
- **Ident. No. 225:** For measuring instruments with DIGIMATIC connection
- **Ident. No. 230:** For measuring instruments with DIGIMATIC connection (2 m cable length)
- **Ident. No. 235:** For measuring instruments with PROXIMITY connection
- **Ident. No. 240:** For measuring instruments with Power RS232 connection

Advantage:
- Cost-effective solution for transferring measured data
- Software-neutral data transmission in keyboard format HID (human interface device)
- No driver file is needed for the USB interface
- No additional data cable required for the measuring instruments

Notes:
No additional data cable is required.

Technical data:
- Interface input: en

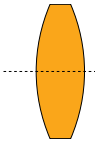
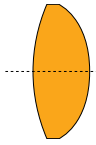
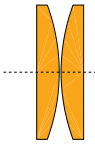
Magnifiers and reading glasses
Lens systems



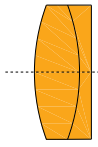
Biconvex lens system
Biconvex lens system lenses are lenses with two convex surfaces. It is the simplest and most commonly used lens shape for magnifiers. In contrast to biconvex lenses, plano-convex lens have one convex and one flat surface. Plano-convex lenses are used in aplanatic lens systems. (See aplanatic lens system).



Aspheric lens system
The surfaces of a spherical lens correspond to a section of the surface of a sphere. In contrast, aspheric lenses deviate from this spherical shape. Comparatively higher magnifications can be achieved using aspheric lenses as the defects that inevitably occur in any image produced by lenses are minimised.



Aplanatic lens system
Aplanatic lens systems consist of 2 plano-convex lenses, where the convex sides face each other internally. This allows a larger, field of vision with sharp edges at a relatively high magnification.



Achromatic lens system
Achromatic lens systems consist of at least 2 cemented lenses. The facing sides must have the identical opposite curvature. The lenses consist of crown and flint glass. Achromatic lenses deliver transparent images to the edge of the visual field, even for high-contrast objects.

ESCHENBACH Biconvex folding magnifying glasses

ORION® LED magnifying lamp

Application:
For magnifying small parts with an additional light source.

Execution:
- 12 W LED lamp with 60 LEDs
- Outreach approx. 850 mm
- With table clamp
- Mains connection 220-240 V/50 Hz
- Colour temperature 6,500 K
- Light output 870 lm

Advantage:
- Handle for easy positioning of the magnifier head

Notes:
Replacement LED light source available on request

Technical data:
- Magnification: 1,75-times
- Lens diameter: 122 mm
- Design: Articulated arm with table clamp

Prod. Gr. 454

ATORN LED magnifying lamp

with LED segmentation

Application:
For magnifying small parts with additional light source.

Execution:
- Bright illumination with 90 ultra bright SMD LEDs
- Segmented LED switching in 2 stages
- Non-slip, well-designed, soft plastic ring for impact protection
- 6500 K colour temperature (daylight)

Advantage:
- Extremely low power consumption (only approx. 9 watts)
- Metal arm with plastic cover, no danger of pinching
- Long LED service life, no risk of breakage
- External switch for use as a table lamp
- High-quality lens

Delivery:
Magnifying lamp, 65 mm table clamp and instructions

Technical data:
- Magnification: 2,25-times
- Lens diameter: 127 mm
- Design: Articulated arm with table clamp

Prod. Gr. 4AA

Waldmann LED magnifying lamp

TEVISIO

Application:
For magnifying small parts with additional light source.

Execution:
- Illuminated by LEDs
- Consumption: approx. 13 W
- IP 20 degree of protection, protection class 2
- Power supply unit, 100-240 V, 50/60 Hz, 3.4-3.6 m connection line
- Integrated membrane key for ON/OFF, dimming or visualiser function
- 3.5/8 DPT

Advantage:
- Long service life thanks to stable and robust aluminium frame
- Optimum support in the evaluation and verification of colour and surface qualities
- Moving 2D and 3D head joint provides large action radius
- No distracting reflections thanks to clouded screen
- Lens is simple to replace

Technical data:
- Model: TEVISIO TVD 750/940/DM
- Magnification: 3,5-times
- Lens diameter: 160 mm
- Design: Articulated arm with screw-on plate

Compact entry-level model

Application:
For detailed visual inspections in hard-to-reach places. Record and store images and videos.

Execution:
- VideoPocket HD model
- Compact entry-level model with 4.3 inch colour TFT display, 480 x 272 pixels
- 2x digital zoom in 25 % increments
- Evaluation and documentation using internal photo memory, micro SD card and USB interface, image and video
- Image comparison function to determine differences
- DOF: depth of focus 30-80 mm
- TopClips: Magnet, mirror and hook attachment for mounting on the camera head

Delivery:
with TopClips, 8 GB micro SD card, batteries (4x AA), in case

Notes:
Supports micro SD cards up to 32 GB

Technical data:
- Model: VideoPocket HD
- Camera head diameter: 5.2 mm
- Cable length: 1 m
- Probe design: Flexible
- Line of sight: 0 Degree
- Min./max. sharpness range: 30-80 mm
- Display resolution: 480 x 272 pix
- Screen size: 4.3 in
- Data transmission type: 1 x micro USB 3.0 | SD
- Image rotation: 360° (2 x 180°)
- External memory on SD card: Up to 32 GB
- Number of LEDs: 6
- IP protection class: IP 67

PCE-VE 200 inspection camera

Compact entry-level model

Application:
For detailed visual inspections in hard-to-reach places. Record and store images and videos.

Execution:
- PCE-VE 200 model
- Compact entry-level model with 3.5 inch colour LCD display, 640 x 480 pixels
- 2x, 3x and 4x digital zoom
- Evaluation and documentation using micro SD card and USB interface, image (1,600 x 1,200 JEP) and video (640 x 480 AVI)
- DOF: depth of focus 15-100 mm

Advantage:
- Resistant to machine oil, light oil and 5 % saline solution
- IP67 probe

Delivery:
with USB cable, USB adapter, operating instructions

Notes:
Micro SD card not included in scope of delivery

Camera head Ø (mm)		4.5

Laserliner VideoInspector inspection camera

with and without 3D camera control

EXTENDED PROGRAM

Application:
For detailed visual inspections in hard-to-reach places. Record and store images and videos.

Execution:
- VideoInspector 3DX model
- Video inspection system with 3.5 inch TFT colour display, 640 x 480 pixels
- 2x digital zoom in 10 % increments
- Media gallery showing the date and time of the images and videos
- 3DX 1.5 m camera unit with 9 mm head diameter
- DOF: depth of field 30-80 mm
- Camera head with manual control via joystick. Can be rotated 360° and folded out to max. 150°

Advantage:
- Camera probe resistant to petrol and diesel
- Interchangeable camera unit
- Magnetic holder keeps both hands free

Delivery:
with Li-ion battery pack, magnetic holder, USB charging cable, HDMI cable, 8 GB micro SD card, card reader, screwdriver, in case

Notes:
Supports micro SD cards up to 32 GB

Technical data:
- Line of sight: 0 Degree
- Display resolution: 640 x 480 pix
- Screen size: 3.5 in
- Data transmission type: USB-C | SD
- Image rotation: 360° (2 x 180°)
- External memory on SD card: Up to 32 GB
- Number of LEDs: 6
- IP protection class: IP 68

Laserliner VideoFlex HD inspection camera

with various camera units

EXTENDED PROGRAM

Application:
For detailed visual inspections in hard-to-reach places. Record and store images and videos.

Execution:
- VideoFlex HD model
- High resolution video inspection system with 5 inch TFT colour display, 1,280 x 720 pixels
- 2x digital zoom in 10 % increments
- 1:1 reproduction: Camera and display with the same resolution, hence no loss in quality.
- Mirror function for the correction of mirror-inverted images
- Webcam function for live transfer to PC, ideal for stationary use in industry
- Optimum contrast reproduction of grey scales
- Replaceable camera unit
- Camera dia. 7.9 mm, probe length 1.5 m, DOF: depth of field 30-80 mm

Advantage:
- Camera probe resistant to petrol and diesel
- 1:1 reproduction: Camera and display with the same resolution, hence no loss in quality.
- Magnetic holder keeps both hands free

Delivery:
with HighCapacityPack (Li-ion), power supply/charger with international adapter, USB-C cable, magnetic holder, micro SD card, TopClips camera attachments, in case

Notes:
Supports micro SD cards up to 32 GB

Technical data:
- Line of sight: 0 Degree
- Min./max. sharpness range: 30-80 mm

HD BoreScope-Duo camera accessories

Camera unit for VideoInspector and VideoFlex HD

Application:
To expand the viewing options of inspection cameras VideoInspector and VideoFlex HD

Execution:
- HD BoreScope Duo camera model
- Fixed camera head for inspection cameras VideoFlex HD and VideoInspector
- Camera head diameter 5 mm, probe length 300 mm
- Camera head with front and side camera, resolution 1,280 x 720 pixels
- DOF: Depth of focus front 30-80 mm/side 20-50 mm
- 6 high-performance LEDs and one additional LED on the side camera

Advantage:
- Fixed camera probe makes positioning in bore holes or cavities easier
- Rapid change of view between front and side camera at the touch of a button

VideoInspector 3D inspection camera

with tilting camera and joystick

EXTENDED PROGRAM

Application:
For detailed visual inspections in hard-to-reach places. Record and store images and videos.

Execution:
- VideoInspector 3D model
- Professional video inspection system with 3.5 inch TFT colour display, 640 x 480 pixels and separately moving camera head
- 4x digital zoom in 10 % increments
- 3D titanium camera head with manual control via joystick. Can rotate by 360° and fold by max. 210°
- Evaluation and documentation using micro SD card and USB interface, image and video
- HDMI port for direct connection to external monitor
- Hold function: still image
- Micro camera, dia. 6 mm, probe length 1 m, depth of field: 25-100 mm, high-grade, durable and flexible tubing made of tungsten

Advantage:
- Replaceable camera unit
- Magnetic holder keeps both hands free

Delivery:
with Li-ion battery pack, magnetic holder, USB charging cable, HDMI cable, 8 GB micro SD card, card reader, screwdriver, in case

Notes:
Supports micro SD cards up to 8 GB

Technical data:
- Camera head diameter: 6 mm
- Probe design: 3D controllable

Rigid endoscopes Top-Line Pro

with fixed viewing direction and remote focusing ring

Application:
For inspecting straight bores and cavities. The high-quality specially calculated lens systems offer outstanding image reproduction and facilitate the inspection of the smallest details with their excellent resolution and brightness.

Execution:
- Modern, multi-layered gradient lens (GRIN lens technology)
- Remote focusing ring for diopter adjustment
- Optimised fibre-optic connection for connecting external light sources
- Rigid endoscope tube
- Temperature in air: Complete endoscope: -20°C to +50°C, (endoscope probe only: up to +120°C)
- Pressure resistance in air: up to 5 bar
- Fluid resistance: Endoscope probe can be submerged for a short time in water, salt solution (5%), kerosene, petrol, diesel or 70% alcohol
- Humidity: up to 95% at 40°C (non-condensing)

Advantage:
- very good luminous efficacy, high image quality and clear display with optional light source
- optional add-on and rotating 90° reflective tube available for 360° view
- can be adapted for camera systems for documentation tasks
- Top-Line Pro available with temperature resistance of up to +300 °C on request

Delivery:
Endoscope, cardboard packaging

Notes:
Light source and reflective tube not included in the scope of delivery

Technical data:
- Model: Top-Line Pro
- Line of sight: 0 Degree
- Endoscope tube: Rigid
- Design: EL light guide 41450450

Flexible endoscope Top-Line Flexible

Probe outer diameter 2.5 mm to 5 mm

Application:

For visual inspection of hard-to-reach areas, such as curved components with narrow radii. The manually controlled angled probe tip also allows a flexible view. Ideal for inspecting closed housings with transverse channels. In addition, the probe position can be easily fixed from the outside.

Execution:

- Probe outer diameter 2.5 mm to 5 mm
- Working lengths from 700 mm to 1200 mm
- Resolution up to 18,000 pixels
- Probe tip can be angled 2 times with locking function
- Remote focusing ring for diopter adjustment
- Light sources such as LED, halogen, xenon and inspection lamps for mobile applications can be connected
- Adaptable to camera systems

Advantage:

- High-brilliance and high-contrast images
- Highly flexible probe with manually controlled angled probe tip
- Locking function for fixing the angled probe position
- Robust, waterproof probe with protective sheath made of stainless tungsten braid
- Adaptable to camera systems for documentation tasks

Delivery:

Top-Line endoscope, 90° mirror head, (with Flexible Pro dia. 5mm optional 90° prism head), LED manual light source SuperNova, Li-ion battery with charger and robust aluminium case

Technical data:

- Model: Flexible Pro
- Probe tip angular offset: 2-fold per 120°
- Line of sight: 0 Degree
- Diopter compensation: Adjustable

Flexible endoscopes

MTFS series for the smallest diameters without angled probe tip

Application:

For visual inspection of hard-to-reach areas, such as curved components with narrow radii. Particularly suitable for inspecting miniature components and channels in the field of micro-electronics, precision engineering.

Execution:

- Probe outer diameter 0.5 mm to 2.5 mm
- Working lengths from 500 mm to 15000 mm
- Resolution up to 30,000 pixels
- Flexible probe with rigid probe head
- Remote focusing ring for diopter adjustment
- Separate or fixed 1500 mm length light guides for external light sources.
- IP65 protection class
- Optional 90° mirror head from 1.0 mm probe diameter on request
- Adaptable to camera systems

Advantage:

- For inspections in the smallest components and channels
- Flexible, robust in use due to high breaking resistance
- Repairable quartz-fibre bundle

Technical data:

- Model: MTFS
- Line of sight: 0 Degree
- Diopter compensation: Adjustable

Stands for USB microscopes

Application:

Ident. No. 085: Sturdy column stand with large boom arm, fast vertical adjustment and fine focus adjustment. 180 mm height adjustable, 150 mm horizontal extension arm incl. 150 mm extension, holder on column rotatable by 360°, focussing facility.

Ident. No. 089: Column stand with extension arm and 150-mm range + 150-mm extension to extend the range. Z-axes can be precisely adjusted using the turning knob.

Ident. No. 092: Sturdy telescopic stand with base plate and table clamp (12.5 to 38 mm). Working area horizontal approx. 580 mm and vertical 910 mm. Extendable and can be rotated 360°.

Ident. No. 093: Column stand with Z-axis fine adjustment via turning knob, enabling precise positioning during microscopy.

Ident. No. 094: Column stand with Z-axis fine adjustment via turning knob, enabling precise positioning during microscopy. In addition, the column stand can be tilted on the underside, therefore extending its range of applications.

ATORN Digital microscope

with extensive software functions

Application:
ATORN digital microscopes for inspection and documentation tasks. Ideally suited to enabling dynamic inspections with no motion blur.

Execution:
- Robust aluminium stand design with fine focusing system
- Premium-quality 30x digital camera for fast live image display in Full HD (1080p) resolution at 60 fps (frames per second)
- 5x lens for 2.1x to 131.6x magnification
- Interchangeable lens connection for quick lens changing
- Integrated and intuitive software for measurement and documentation tasks
- Wireless keyboard and wireless mouse
- Internal 16 GB memory for remote storage
- Advanced camera settings
- Extensive software functions
- **Ident. No. 015:** LED ring light (segmentable) for different lighting scenarios
- **Ident. No. 020:** LED ring light (segmentable) and LED transmitted light (dimmable) for different lighting scenarios

Advantage:
- Auto calibration saves time-consuming recalibration of individual zoom levels
- Integrated system with powerful image processing software and control engine. No additional PC required.
- Multiple focus functions for fast inspections
- Network-capable

Delivery:
Digital microscope, 5x lens, wireless mouse and keyboard, HDMI cable, mini USB cable (for PC connection), 16 GB USB memory stick, quick start manual

Notes:
Supplied without monitor. We recommend using a 24-inch Full HD monitor with HDMI connection

KERN Stereo microscopes

incl. three interchangeable lenses

Application:
for simple viewing of mechanical components, electronic PCBs and for general surface inspections. Ideal for workshops and training facilities

Execution:
- Interchangeable lenses for 10x, 20x and 40x magnification
- binocular lens barrel with 45° viewing angle
- Rotatable eyepieces with dioptre adjustment
- LED reflected and transmitted lighting, individually dimmable

Advantage:
- 45° viewing angle for convenient and effortless work

Technical data:
- Lens tube type: Binoculars
- Stand design: Section pillar
- Viewing angle: 45 Degree
- Eyepiece type: WF 10x/20
- Field of view figure: 20
- Tripod plate width: 164 mm
- Tripod plate depth: 202 mm

41612...	Ident. No.	025 ●

Prod. Gr. 412

KERN Stereo zoom microscope

binocular or trinocular, with manual zoom

Application:
For viewing mechanical components, electronic PCBs and for general surface inspections in quality assurance, in production environments and in education.

Execution:
- 7.5x to 45x magnification
- Manual zoom with zoom factor 6.4: 1
- LED ring light, 3 W, dimmable
- **Ident. No. 180:**
  - binocular lens barrel, with 45° viewing angle, rotatable eyepieces
  - widefield eyepieces, HSWF10x/23 mm
  - working distance 110 mm
  - visual field diameter 32.8 to 5.1 mm
- **Ident. No. 185:**
  - Trinocular lens barrel, with 45° viewing angle, rotatable eyepieces
  - Light distribution 50:50
  - Widefield eyepieces, HSWF 10x/23 mm
  - Working distance 110 mm
  - Visual field diameter 32.8 to 5.1 mm
  - C-Mount adapter, 0.5x, for mounting a USB digital camera

Advantage:
- Convenient and effortless work thanks to 45° inclination
- Clear and distortion-free images with Greenough lens system

Delivery:
Ident. No. 180: Stand with LED ring light, microscope head and holder, eyepieces, eye cups and dust cover
Ident. No. 185: Stand with LED ring light, microscope head and holder, eyepieces, eye cups, 0.5x C-Mount adapter and dust cover

Notes:
Ident. No. 185: Ideal for documentation tasks when used in conjunction with an optional digital camera and software.

Technical data:
- Viewing angle: 45 Degree
- Eyepiece type: HSWF 10x/23
- Field of view figure: 23
- Min. zoom magnification: 0.75x
- Max. zoom enlargement: 4.5x
- Zoom factor: 6.4 : 1
- Column diameter: 25 mm
- Tripod plate width: 280 mm
- Tripod plate depth: 290 mm

KERN Stereo microscope with boom stand

binocular or trinocular, with manual zoom

Application:
For viewing mechanical components, electronic PCBs and for general surface inspections in quality assurance, in production environments and in education. Ideally suited for inspecting e.g. large components

Execution:
- 7.5x to 45x magnification
- Manual zoom with zoom factor 6.4: 1
- Eyepieces, adjustable 52-76 mm with dioptre adjustment (-6/6)
- Widefield eyepieces, HSWF 10x/23 mm
- 4.5 W LED ring light
- **Ident. No. 190, 195:** Binocular lens barrel
- **Ident. No. 190–191:** Telescopic tripod with tripod plate 254x254x40 mm

Mobile impact hardness tester

POLDI system

Application:
For indirect determination of Brinell hardnesses of materials made from steel, bronze, aluminium, copper, brass, grey cast iron and chilled cast iron. Suitable for components with masses from approx. 5 kg.

Execution:
- Reference rod with 686.7 N/mm² strength
- Measuring magnifying glass with 8x magnification
- Hardness comparison tables for steel, cast iron, copper and aluminium alloys, rolled and cast brass, bronze, grey cast iron and chilled cast iron
- Ball holder

Advantage:
- Simple and cost-effective entry-level device for components from a minimum mass of 5 kg

Delivery:
Delivered in case, includes reference rod (686.7 N/mm² strength), measuring magnifying glass 8x magnification, 1 set of tables.

Technical data:
- Min. strength range: 343.35 N/mm²
- Max. strength range: 1962 N/mm²
- Scale magnifier: 8x
- Length x width x depth: 17.5 x 6.5 x 3.5 mm

2000N mobile rebound hardness tester

with external type D impact device

Application:
For calculating and directly displaying hardness values in HL (Leeb), HB, HV, HRA (Rockwell A), HRB (Rockwell B), HRC and HS (Shore). Suitable for large components made from steel, stainless steel, cast iron, aluminium alloys, brass, bronze and copper forged alloys from a mass of approx. 5 kg upwards.

Execution:
- OLED colour display resolution 128 x 64 pixels

Advantage:
- The measured values are stored on the USB flashdrive
- Measurements can be carried out at a range of different angles
- Data storage for up to 600 average values in 6 data groups

Delivery:
PCE-2000N display unit, hardness reference block, type-D impact device, transport case, cleaning brush, operating instructions, 3x AA 1.5 V batteries, 2x stabilisation rings, 2 GB USB flashdrive

Battery designation		1.5 V Mignon AA

Prod. Gr. 4AD

3000ULS mobile UCI hardness tester

with 50N UCI hand-held probe and LEEB type D rebound probe

Application:
For determining and directly displaying hardness values in line with HB (Brinell), HV (Vickers), HRC (Rockwell) on metallic materials. Ideal for fine-grain materials and alloys. Includes 50N standard probe for performing e.g. hardness tests on nitride-hardened, case-hardened and high-frequency-hardened parts and coating tests from 30 microns. Suitable test attachments are optionally available for curved surfaces.

Execution:
- UCI hand-held probe 50N
- LEEB type D rebound probe
- Evaluation: ASTM A1038, ASTM A956
- Single-point adjustment function

Advantage:
- Internal memory for up to 500 user-defined adjustments

Delivery:
Display unit, 50N UCI probe, type D rebound probe, charger, USB cable, case, operating instructions

Min./max. HV measuring range		230-940 HV
Min./max. HRC measuring range		20-70 HRC

SHORE hardness tester (ISO DIN ISO 7619-1 | 7619-1 | 868)

Shore A for soft materials and Shore D for hard materials

Application:
Ident. No. 100: For determining Shore A hardness in line with DIN ISO 7619-1, ISO 7619-1, ISO 868 and ASTM D 2240. Suitable for e.g. soft rubber, elastomers, natural rubber, neoprene, polyester, casting resins etc.
Ident. No. 110: For determining Shore D hardness in line with DIN ISO 7619-1, ISO 7619-1, ISO 868 and ASTM D 2240. Suitable for e.g. hard rubber, acrylic glass, stiff thermoplastics, Formica, vinyl sheets, cellulose/acetate, hard rubber materials etc.

Execution:
- Trailing pointer
- Large glare-free display rotates through 360°
- Accurate to 0.5 hardness units

Advantage:
- Ergonomic handles for excellent handling

Notes:
The devices can be used as hand-held devices or for series testing using ATORN test stands.
Please note: When using with an ATORN test stand, the adapter is also required.

Digital SHORE hardness testers

Shore OO for very soft, Shore A for soft and Shore D for hard materials

Application:
Ident. No. 200: For determining Shore A hardness in line with DIN ISO 7619-1, ISO 7619-1, ISO 868 and ASTM D 2240. Suitable for e.g. soft rubber, elastomers, natural rubber, neoprene, polyester, casting resins etc.
Ident. No. 210: For determining Shore D hardness in line with DIN ISO 7619-1, ISO 7619-1, ISO 868 and ASTM D 2240. Suitable for e.g. hard rubber, acrylic glass, stiff thermoplastics, Formica, vinyl sheets, cellulose/acetate, hard rubber materials etc.
Ident. No. 220: For determining Shore OO hardness in line with ASTM D 2240. Suitable for e.g. foams, cellular and micro cellular rubber, etc.

Execution:
- Large, high-contrast LCD display
- Data output OPTO-RS 232
- Accurate to 0.5 hardness units

Advantage:
- Ergonomic handles for excellent handling
- Large, clear display
- Optional accessories for serial measurements

Notes:
The devices can be used as hand-held devices or for series testing using ATORN test stands.
Please note: When using with an ATORN test stand, the adapter is also required.

Hardness comparison plates

Periodic testing of hardness testing devices

Periodic testing is an important part of monitoring hardness testing devices in terms of the quality management system and must be performed with calibrated and certified hardness reference plates in accordance with ISO 6506-3:2015 (Brinell, part 1 appendix), ISO 6507-3:2005 (Vickers part 1 appendix), ISO 4545-3 (Knoop), ISO 6508-3:2015 (Rockwell part 1 appendix), ASTM E10-14 (Brinell), ASTM E18-15 (Rockwell) and ASTM E384-11 (Vickers and Knoop), and must be documented accordingly.

To avoid a potential systematic measurement error, the test parameters must be derived from the associated certificate. Without a certificate, hardness reference plates are practically useless.

This check is required each time the machine settings are changed, e.g. after switching the test procedure or the indenter. Furthermore, at least one or two test indentations per hardness area and hardness scale are prescribed daily (per working day). Documentation is normatively prescribed or at the very least strongly recommended, as an audit usually includes a review of the documentation of the results of periodic testing. Please consult the corresponding currently applicable standards for further information.

HRA hardness reference plates (ISO 6508-3)

including DAkkS certificate

Application:

For indirect and periodic checking of the functionality and measurement accuracy of hardness testers in line with the HRA test method.

Prod. Gr. 486

Conductivity tester for metals

PCE-COM 20

Application:

The conductivity measuring instrument for the electrical conductivity of non-ferrous metals such as aluminium or copper belongs to the NDT group of devices. The conductivity measuring instrument is used in non-destructive material testing. Using the eddy current measuring principle, which has been proven for this application, the electrical conductivity of metallic materials can be determined quickly and precisely.

Execution:

- Determination of metals and characterisation of alloys
- Assessment of differences in strength in heat-treated or hardened materials
- Authenticity testing of coin alloys
- Checking of alloy inhomogeneities in critical components and material sorting
- Menu languages: German, English, Chinese (simplified)
- 14 mm diameter sensors
- Measured value storage for up to 500 values
- with USB interface

Delivery:

with probe dia. 14 mm, calibration plate set, software, USB data cable, charging adapter, hexagon socket wrench, operating instructions, in case

Type description		PCE-COM 20

Prod. Gr. 4AD

Material flow index tester

for thermoplastics

Application:

The melt flow index tester is designed for both incoming goods inspection and continuous production monitoring. Ideally suited for a wide range of thermoplastic materials to determine the melt mass flow rate.

Execution:

- Measuring range/melting rate: 0.1 to 400 g/10 min
- Temperature: +120 to +400 °C
- Measuring accuracy temperature: ±0.2 °C
- Resolution: 0.1 °C
- Test load: 0.325 to 21.6 kg
- Capillary diameter: 2.095 mm
- Standards: ISO1133-1997, ASTM 1238-04C, GB/T3682-2000

Delivery:

Melt flow index tester PCE-MFI 400, tweezers, funnel, cleaning rod, operating instructions, weight set consisting of 1x 325 g, 1x 875 g, 1x 960 g, 1x 1,200 g, 1x 1,640 g, 1x 2,500 g, 1x 4,100 g, 2x 5,000 g

Min./max. temperature measuring range		+120 to +400 °C
Piston Ø (mm)		9.48
Length x width x height		500 x 320 x 500 mm
48405...	Ident. No.	010 ○

Prod. Gr. 4AD

Paint and powder coating gauge

includes separate combination sensor for ferrous (F) and/or non-ferrous (NF) metal substrates

Application:
For measuring non-magnetic layers, such as paint, plastic, chrome, copper, zinc, enamel etc. on steel/iron, as well as non-electrically conductive layers, such as paint, plastic, enamel, paper, glass, rubber etc. on copper, aluminium, brass and stainless steel, as well as anodised aluminium.

Execution:
- Precision: ±(2 % of measured value ± 1 µm)
- Probe diameter: 17 mm
- Device dimensions (H x W x D): 143 x 71 x 37 mm
- Curvature radius: convex 5 mm, concave 25 mm
- Base material thickness: 0.2 mm on magnetic substrates, 0.05 mm on non-magnetic substrates
- **Ident. No. 100:** incl. combination sensor **Fe**: 0 to 500 µm, **NFe**: 0 to 500 µm
- **Ident. No. 100–105:** Measuring range display unit: **Fe**: 0 to 5,000 µm and **NFe**: 0 to 3,000 µm
- **Ident. No. 105:** incl. combination sensor **Fe**: 0 to 1,500 µm, **NFe**: 0 to 1,500 µm
- **Ident. No. 110:** incl. combination sensor **Fe**: 0 to 2000 µm, **NFe**: 0 to 2000 µm
- **Ident. No. 110–125:** Measuring range display unit: **Fe**: 0 to 5,000 µm and **NFe**: 0 to 3000 µm
- **Ident. No. 115:** incl. combination sensor **Fe**: 0 to 2500 µm, **NFe**: 0 to 2500 µm
- **Ident. No. 120:** incl. combination sensor **Fe**: 0 to 3000 µm, **NFe**: 0 to 3000 µm
- **Ident. No. 125:** incl. combination sensor **Fe**: 0 to 5000 µm, **NFe**: 0 to 3000 µm

Advantage:
- Warning on measurements outside of maximum measuring range
- wear-proof, spring-mounted measuring head for precision measurements
- for measurements on iron/steel and non-ferrous metals
- automatic mode with ferrous/non-ferrous material detection

Delivery:
PCE-CT 80 coating thickness gauge, 3x AAA batteries, operating instructions, transport case, set of standard films
1x calibration plates (Fe and NFe), combination probe

Technical data:
- Probe design: FNF
- Test probe: Separately
- Layer thickness resolution: < 100 µm: 0.1 µm | > 100 µm: 1 µm
- Data transmission type: USB
- Calibration methods: 1-point | 2-point | 4-point | Null-offset according to ISO 19840

Prod. Gr. 4AD

Laserliner Coating thickness gauge CoatingTest-Master

with integrated combination probe

Application:
For determining the thickness of layers, e.g.: paint, anodisation on metallic substrates

Execution:
- Induction and eddy current principle
- Non-magnetic coatings on magnetic substrates and insulating coatings on conductive substrates
- Automatic detection of substrate material (ferromagnetic/non-ferromagnetic)
- Internal memory for 400 measured values
- One-point and two-point calibration
- Digital connection: USB interface for transferring measured values using software
- Min./max./avg. display
- Clear, illuminated display

Delivery:
with calibration references, software, USB cable, batteries (2x AAA), in case

Model		CoatingTest-Master
Probe design		FNF
Test probe		Integrated
Min./max. layer thickness of measuring range		0-1250 µm
Layer thickness resolution		1 µm
Number of measurements		400
Calibration methods		One-point calibration | Two-point calibration

Prod. Gr. 3EE

elcometer® Coating thickness gauges, model series 456C

Integrated Bigfoot™ sensor

Application:

Ident. No. 600: For measuring non-magnetic coatings (paintwork, plastics, chrome, copper, zinc etc.) on magnetic substrates.

Ident. No. 605: For measuring non-magnetic coatings (paints, plastics, chrome, copper, zinc etc.) on magnetic substrates and for measuring non-conductive coatings (paints, plastics etc.) on non-metallic substrates (copper, aluminium, zinc, bronze, brass, etc.)

Execution:

- Robust ABS plastic housing
- Large, easy-to-read 2.4" colour display
- Degree of protection: IP 64, dust-proof and water-resistant
- Internal memory for displaying the last 5 measured values
- Data logging, concave from R=2
- **Ident. No. 600:** Built-in Bigfoot™ F sensor for ferrous (F) metal substrates
- **Ident. No. 605:** Integrated Bigfoot™ combined sensor FNF for ferrous (F) or non-ferrous (NF) metal substrates

Advantage:

- Fast samplings rates of over 70 measurements per minute
- Various calibration methods stored
- Integrated Bigfoot™ sensor for high measuring certainty
- Statistical display

Delivery:

Measuring instrument, calibration films (25, 50, 125, 250, 500, 1000 µm), hand strap, plastic bag, 2x AA batteries, operating instructions

Technical data:

- Type: B
- Test probe: Integrated
- Min./max. layer thickness of measuring range: 0-1500 µm
- Layer thickness resolution: < 100 µm: 0.1 µm
- Accuracy (+/-): 2.5 µm
- Min./max. accuracy (+/-) in %: 1-3 %
- Measuring rate: > 70 measurements/min
- Data transmission type: USB
- Internal memory: 5 measured values
- Adjustable limit values: No
- Calibration methods: One-point calibration | Two-point calibration | Reset to factory calibration

Prod. Gr. 451

elcometer® Ultrasonic wall thickness measuring instrument

incl. 5 MHz dual-element probe, 1/4”

Application:
For non-destructive recording of material thickness, for use on steel materials only. Ideal for monitoring corrosion and erosion on closed components and structures or those accessible only from one side, e.g. pipes, tanks, large metal sheets etc.

Execution:
- Robust ABS plastic housing
- Large, easy-to-read 2.4” colour display
- IP 54 degree of protection, splash-proof
- Integral zero disc
- Red/green LEDs on the housing, for displaying the upper and lower limit value
- Includes 5 MHz 1/4” dual element measuring head

Notes:
Delivery includes 5 MHz 1/4” dual element measuring head

Technical data:
- Model: MTG 2
- Min./max. Pulsed-Echo (P-E) measuring range: 0.63-500 mm
- Resolution of wall thickness: 0.1 mm
- Accuracy (+/-): 0.1 mm
- Accuracy (+/-) in %: 1 %
- Calibration methods: Precalibrated
- Calibration memory: No
- Display mode: Measurement

46100...	Ident. No.	100 ●

Prod. Gr. 451

elcometer® Ultrasonic wall thickness measuring instrument

For separate test probes

Application:
For non-destructive recording of the material thickness of a wide range of acoustically conductive materials such as metals, NF metals, ceramic, plastics, glass, etc. Ideal for monitoring corrosion and erosion on closed components and structures or those accessible only from one side, e.g. pipes, tanks, large metal sheets etc.

Execution:
- Robust ABS plastic housing
- Large, easy-to-read 2.4” colour display
- IP 54 degree of protection, splash-proof
- Integral zero disc
- Red/green LEDs on the housing, for displaying the upper and lower limit value
- **Ident. No. 120–130:** Scan mode for uniform inspections

Advantage:
- **Ident. No. 110:**
  - Easy to use
  - High measuring accuracy
  - Efficient measurement

Notes:
Test sensor not included in scope of delivery!

Dual-element probes

For ultrasonic wall thickness measuring instruments in the MTG model series

Application:
Suitable for measuring e.g. steel, glass and thin plastics in conjunction with an Elcometer ultrasonic wall thickness gauge from the MTG series.

Advantage:
- **Ident. No. 206:** ThruPaint technology – ignores the thickness of coatings in Echo-Echo mode

Technical data:
- Probe diameter inch: 1/4
- Test frequency: 5 MHz
- Cable output direction: Radial

Prod. Gr. 451

Ultrasonic wall thickness measuring instrument

with separate probe

Application:
For undisturbed recording of material thicknesses of highly-diverse acoustically conductive materials such as metals, NF metals, ceramic, plastics, glass etc. Ideal for monitoring corrosion and erosion on closed components and structures or those accessible only from one side, e.g. pipes, tanks, large metal sheets etc. Large-area inspections can be conveniently carried out in scan mode.

Execution:
- Robust plastic housing
- Graphic-capable, backlit LCD display
- Incl. standard 5 MHz probe with 10 mm probe diameter
- Single point measurement and/or scan mode (10 measurements per second)
- Internal memory for 20 files (up to 100 measured values per file)

Advantage:
- Simple operation via user-friendly menu
- Optional probes available for numerous applications
- Integrated calibration standard

Delivery:
Measuring instrument with 5 MHz probe, 2x 1.5 V, AA batteries, 70 ml coupling liquid, operating instructions, transport case

Technical data:
- Min./max. length measuring range: 1.2-230 mm
- Min./max. sound velocity of measuring range: 1000-9999 m/s
- Resolution of wall thickness: 0.1 mm
- Probe: Separately
- Transceiver probe diameter: 10 mm
- Test frequency: 5 MHz

Example application with standard test head

Surface-roughness reference samples

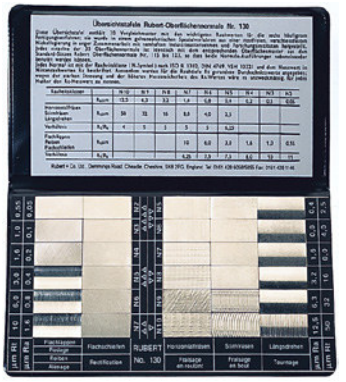
for the six most common machining processes

Application:
Surface-roughness reference samples for assessing surface roughness through simple visual and tactile comparison in line with DIN ISO 4287, DIN ISO 4288, BS 2634 and ANSI B 46.1. Machining method: Horizontal milling, face milling, longitudinal milling, reaming, flat grinding, lapping

Execution:
- Wear-resistant and non-rusting
- Evaluation parameters Ra and Rz
- Extract from machining methods such as horizontal and face milling, longitudinal turning, reaming, flat grinding and lapping

Advantage:
- Galvanoplastic manufacturing method for high accuracy and uniformity

Delivery:
Set of surface-roughness reference samples for all machining methods: Horizontal milling, face milling, longitudinal milling, reaming, flat grinding, lapping



Machining method		Horizontal milling | Front milling | Longitudinal turning | Flat grinding | Lapping | Reaming
Model		130
Number of comparative patterns (PCS)		30

MarSurf PS 10 roughness measuring instrument

mobile roughness measuring instrument with removable feed unit

Application:
Compact, mobile roughness measuring device for standardised roughness measurement in production and measuring rooms.

Execution:
- Stylus instrument with feed unit for skid-type probe
- calibration standard integrated in feed unit
- Roughness parameters in line with DIN ISO, JIS and ASME
- inductive skid-type probe with 2 µm diamond probe tip

Advantage:
- simple and intuitive operation, no training required
- reliable measurement using automatic cut-off selection (patented)
- Measurements in all directions: horizontal, vertical and overhead

Probe system		Runner probe system
Surface roughness measuring range		350 µm
Surface roughness resolution		0.01 µm | 0.001 µm
Threshold wave length		0.25 mm | 0.8 mm | 2.5 mm

SJ-220 roughness tester

with external feed unit

Application:
Compact, mobile roughness tester for standardised roughness measurement in production and measuring rooms.

Execution:
- mobile roughness tester with removable feed unit
- 2.8 inch backlit colour LCD touchscreen display
- Roughness characteristics in accordance with EN ISO 21920, EN ISO 4287, ISO 13565, ISO 12085, VDA, ASME, JIS and user-defined conditions
- Skid probe with 2 µm diamond probe tip
- **Ident. No. 012:** Standard feed unit with motorised feed and retraction
- **Ident. No. 022:** Type S feed unit with motorised feed and retraction and additional motorised probe lowering
- **Ident. No. 032:** Type R feed unit with motorised crossfeed

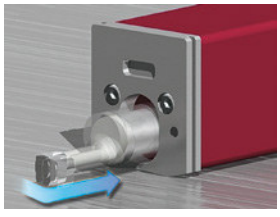
Advantage:
- clear display of measurement results
- Calculation results, evaluated profiles, BAC curves and ADC curves can be displayed
- free SJ Communication Tool software
- operated using buttons on the front and touchscreen

NEW

- optional Bluetooth connection to PC or smartphone

Delivery:
Roughness tester, roughness standard Ra 3 µm, standard probe 2µm 60°, AC charger plug, USB-C cable and transport case

Notes:
Suitable accessories are listed below each article in the online shop www.hahn-kolb.de.



Feed unit Type R, lowers via motor

Prod. Gr. 3MD

Roughness measuring instrument DIAVITE MICRO

with internal feed unit VH and external feed unit VHF

Application:
Compact, mobile roughness measuring device for standardised roughness measurement in production and measuring rooms.

Execution:
- Roughness parameters in accordance with DIN ISO, JIS, ASME
- including SH standard probe with diamond probe tip 5 µm
- **Ident. No. 110:** with VH internal feed unit for skidded tracers
- **Ident. No. 120:** with VHF external feed unit for skidded and skidless tracers

Advantage:
- selectable standardised evaluation of parameters in accordance with ISO standard 4287 (withdrawn) and new ISO standard 21920-2:2021
- simple and intuitive operation, no training required
- Measurements in all directions: horizontal, vertical and overhead

Delivery:
Display unit with feed unit, SH 5 µm/90° standard probe, power supply/charger, DIAVITE App light software, roughness standard approx. Ra 3 µm, case

Mahr Roughness measuring instrument MarSurf M 310

mobile roughness measuring instrument with feed unit for skid-type probes

Application:
Compact, mobile roughness measuring device for standardised roughness measurement in production and measuring rooms.

Execution:
- 4.3 inch TFT touch display, colour, backlit
- Stylus instrument with feed unit for skid-type probe
- Status indicated by LED light bar
- inductive skid-type probe with 2 µm diamond probe tip
- integrated calibration standard
- USB Bluetooth(R) interface, e.g. for printer
- Roughness parameters in line with DIN ISO, JIS and ASME
- MarWin Explorer software for easy analysis (free version can be downloaded from the MAHR website)
- Data backup as TXT, X3P, CSV and PDF file
- **Ident. No. 040:** Including thermal printer for wireless printing of profiles and results via Bluetooth(R) or cable connection

Advantage:
- simple and intuitive operation, no training required
- dynamic calibration function enables reliable measurement through automatic cut-off selection (patented)
- Measurement results transferred via Bluetooth(R) or cable connection
- Quick access to individually used functions via favourites list in the display
- Tolerance input and monitoring

DIAVITE AG Roughness measuring instrument DIAVITE DH-9

with VH external feed unit for skid-type probes and VHF for skid-type probes and free tracers

Application:
Compact, mobile roughness measuring device for standardised roughness measurement in production and measuring rooms.

Execution:
- integrated thermal printer for roughness values and profile
- Roughness parameters in accordance with DIN ISO, JIS, ASME
- including SH standard probe with diamond probe tip 5 µm
- **Ident. No. 210:** with VH external feed unit for skidded tracers
- **Ident. No. 220:** with VHF external feed unit for skidded and skidless tracers

Advantage:
- selectable standardised evaluation of parameters in accordance with ISO standard 4287 (withdrawn) and new ISO standard 21920-2:2021
- simple and intuitive operation, no training required
- Measurements in all directions: horizontal, vertical and overhead

Delivery:
Display unit with feed unit with connecting cable, SH 5 µm/90° standard probe, USB connecting cable, screwdriver, DIAVITE App light software, roughness standard approx. Ra 3 µm, test record, operating instructions, case

DIAVITE AG Roughness measuring instrument DIAVITE NANO

with VH external feed unit for skid-type probes and VHF for skid-type probes and free tracers

Application:
For standardised roughness measurement in production and measuring rooms. Depending on the application, the NANO feed unit with integrated interface can be connected to an MS Windows PC or tablet. Evaluation, storage and documentation carried out via the DIAVITE App Light software.

Execution:
- Roughness parameters in accordance with DIN ISO, JIS, ASME
- including SH standard probe with diamond probe tip 5 µm
- Calibration of up to 8 probes
- A range of optional measuring probes are available, for almost all measuring tasks, customer-specific solutions possible
- **Ident. No. 240:** with VH external feed unit for skidded tracers
- **Ident. No. 260:** with VHF external feed unit for skidded and skidless tracers

Advantage:
- selectable standardised evaluation of parameters in accordance with ISO standard 4287 (withdrawn) and new ISO standard 21920-2:2021
- simple and intuitive operation, no training required
- Measurements in all directions: horizontal, vertical and overhead
- Measurement programs optionally accessible via barcode scanner. Image of the measuring task can be stored in the measurement program.
- Storage of measurement conditions in measurement program and creation of test record in pdf, csv and txt format

Delivery:
NANO roughness tester, SH standard probe with test report, calibration standard metal Ra = 3.0 µm, USB stick with DIAVITE APP REGULAR software and operating instructions, USB connection cable and charging cable. Not included in scope of delivery: PC, laptop or tablet.

ATORN Roughness measuring instrument

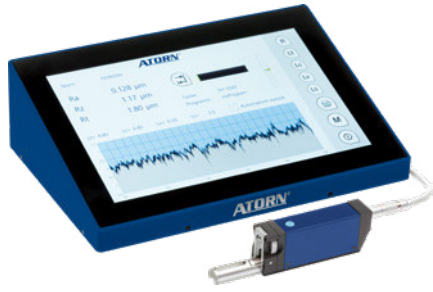
Skid-type probe and free tracer system

Application:
Roughness measuring device for standardised roughness measurement in production and the measurement room.

Execution:
- 10.1" Full HD industrial touchscreen PC with Windows IoT operating system
- Feed unit for skid-type probes and reference surface probes (free tracers)
- Wide range of optional sensors available for virtually any measuring task
- Outputs: 2x USB 3.0, 1x mini HDMI, 1x LAN RJ45, optional Bluetooth(R)/Wi-Fi
- Data output in PDF, CSV or TXT format for log creation
- Internal 32 GB memory
- Intuitive menu guidance, multiple languages available
- Network-capable

Advantage:
- Measurement conditions are stored with an image for a visual representation of the measuring task
- Mini HDMI for image transfer, e.g. to an external monitor
- Maximum process reliability with measuring programs that you can call up with barcode scanners
- 3-stage user level selection for individual access privileges
- Up to eight sensors can be calibrated individually to shorten testing times

Delivery:
Roughness measuring device, feed unit, standard 5 µm skid-type probe, connection cable, power cable, roughness standard approx. 3 µm, inspection log, plastic case



Probe system		Runner probe system | Free probe system
Surface roughness measuring range		350 µm | 20 µm

Roughness measuring instrument MarSurf M 410

Skid-type probe and free tracer system

Application:
Mobile roughness measuring device for standardised roughness and waviness measurements in production and measuring rooms. The magnetic probe arm holder enables probes to be changed quickly without tools.

Execution:
- Large, illuminated 4.3-inch TFT rotating touch display
- BFW probe with magnetic holder and probe arm protection
- 2 µm BFW A 10-45-2/90° probe arm
- **Ident. No. 412:** external thermal printer with Bluetooth(R) interface

Advantage:
- Automatic cut-off selection (threshold wavelength Lc) ensures correct measurement results even for non-measuring technicians. Cut-off selection can also be shortened or variably defined
- Menu-guided inclination adjustment
- Display and feed unit separate

Delivery:
Ident. No. 410: MarSurf M 410, MarSurf MD 26 feed unit, BFW 250 probe system, 2 µm BFW A 10-45-2/90° probe arm, probe arm protection, USB-A to Micro-USB connecting cable, MarSurf M 410 docking station, wide-range power supply with 3 mains power supply adapters, hexagon key, operating instructions, case

ATORN Contour measuring instrument easyCONTOUR 120

Probe direction - downwards

Application:
for measuring and evaluating functional geometries of components. workpieces can be measured over the entire measurement range using a fully automated process. the latest teach-in programming method requires no special programming skills.

Execution:
- Touchscreen PC with Windows 10 64-bit operating system
- Wireless keyboard and mouse
- High-performance measurement and evaluation software
- Base plate made of hard stone with enclosed T-groove
- **Y/R** support table, 190x190 mm, adjustable 38 mm in **Y** and +/-3° **R**adial
- High-quality industrial joystick for easy probe positioning
- Standard probe 120/20.5 (25 µm ceramic)
- Motorised Z-pillar
- Optional: comprehensive sensor range

Advantage:
- Generate automatic measuring sequences using teach-in: no programming skills required
- Automatic measurement and evaluation over the entire measuring range
- Scanning arms can be changed smoothly, easily and quickly
- Software-controlled scanning arm lifting function
- Options: Barcode scanner with QR code toolkit software module

Material of base plate		Hard stone
Measuring range of X axis (Lx) (mm)		120
Measuring range of Z axis (Lz) (mm)		30
Probe direction of Z axis		Probe downwards
Min./max. measurement speed		0.03-1.75 mm/s
X axis error limit		1.2 µm + 2 Lx/25 (L in mm)
Z axis error limit		1.8 µm + 2 Lz/25 (L in mm)

ATORN Spring balances with spherical probes

Application:
For testing and setting control elements with adjustable friction moments, contact forces in electrical switch gears and regulating and controlling elements in motor vehicles.

Execution:
- Measuring possible in both directions
- Dial face with scale in centinewtons (cN) or newtons (N)
- Error limit 0.01 x (final value + measured value)
- Trailing pointer
- **Ident. No. 151:** Shortened sensor lever

Delivery:
In case

PESOLA Cylindrical spring force scale
with hook

Application:
Convenient, precision spring scale for tensile force measurement

Execution:
- Anodised, abrasion-resistant aluminium tube
- upper and lower bracket, can be rotated 360° and swivelled
- "click and go" suspension system at the bottom end
- Suspension at the top end with round eyelet

Advantage:
- laser scale for high-contrast reading
- Swiss quality product with high degree of accuracy
- can be converted for compressive force measurement

Delivery:
In plastic case with operating instructions

Technical data:
- Suspension type: Hook
- Error limit, based on end value: +/- 0.3 %
- Tare range (zero position) min./max.: 15-20 %

Special cylindrical spring force scale
with hook

Application:
Convenient, precision special spring scale for tensile and compressive force measurement

Execution:
- Anodised, abrasion-resistant aluminium tube
- upper and lower bracket, can be rotated 360° and swivelled
- "click and go" suspension system at the bottom end
- Suspension at the top end with round eyelet
- Tare and zero setting device

Advantage:
- laser scale for high-contrast reading
- Swiss quality product with high degree of accuracy
- can be retrofitted with optional accessories for compressive force measurement
- Tare range (zero setting) up to 20 %

Delivery:
In plastic case with operating instructions

Technical data:
- Diameter: 32 mm
- Suspension type: Hook
- Design: Without click and go system
- Error limit, based on end value: +/- 0.3 %
- Trailing pointer: Yes
- Tare range (zero position) min./max.: 15-20 %

Handheld tensile and pressure force tester, model 326

With electronic measurement display

Application:
Robust, electronic handheld force measuring unit for mobile applications, for checking actuation forces and rigidity of assemblies and components such as springs, buttons, switches, levers, closures etc. This unit is used primarily in quality assurance, incoming goods inspections, production and research and development.

Execution:
- Fixed measuring frequency from 1000 Hz
- High-resolution force sensor
- Processor-controlled electronics with the latest software
- Calibration is carried out using reference measuring devices or weights
- Rechargeable batteries ensure smooth operation
- Peak value memory for tensile and compressive forces
- 5-digit LCD display + comma with optional backlight
- Display resolution +/- 20,000 digits
- design with path encoder deliverable on request

Advantage:
- Simple and safe to use
- Maintenance-free, electronic handheld force measuring device for mobile applications
- Once saved, basic settings remain stored even when the device is switched off
- Ergonomic design, therefore suitable for left and right-handed users
- Fixed installation possible in testing devices

Delivery:
Unit with battery pack set, 230 V AC power supply unit/charger, USB charging cable, factory calibration certificate, transport case, accessories

Technical data:
- Error limit, based on end value: 0.1%

Min./max. force of measuring range		0-50 N	0-100 N	0-200 N	0-500 N	0-1000 N	0-2000 N	0-5000 N

Prod. Gr. 443

Handheld tensioning and compression force tester with integrated force sensor

with or without encoder (measuring channel extension)

Application:
For checking actuation forces and strength on components, e.g. springs, buttons, switches, levers, closures, etc. The main areas of application for these handheld force testers are in quality assurance, incoming goods inspection, production, research and development.

Execution:
- Robust aluminium housing with ergonomic grip recesses
- Data logger/measured value recording via built-in 2 GB memory, used via USB 3.0
- Exported data output to ASCII/CSV
- Adjustable measuring frequencies from 50 Hz to 2000 Hz
- Incl. factory calibration certificate
- **Ident. No. 295, 300, 305, 310, 315, 320, 325, 330:**
  - Modern, colour touch-screen display 128x128 pixels, 7 digit + comma
  - without encoder
- **Ident. No. 296, 301, 306, 311, 316, 321, 326, 331:**
  - Modern, colour touchscreen display 128x128 pixels, 7 digit + comma
  - with encoder (measuring channel extension) for connecting to a path measurement system (test stands) or for additional use of an external force or torque recorder

Advantage:
- Rechargeable lithium-ion batteries ensure a long operating life
- Measured value display is flexible and intuitive to configure
- Comprehensive functions and features
- Two M6x10 mounting screws on each face and on the rear which can be used e.g. for a fixed installation
- **Ident. No. 296, 301, 306, 311, 316, 321, 326, 331:** Encoder enables interactions with motorised load frames (test stands) for e.g. the display of force/path diagrams

Delivery:
Tensile and compressive force measuring unit; USB power supply unit; pressure piece, extension, CE declaration of conformity and operating instructions (digital, in the device memory); factory calibration certificate, (for measuring range 20 N to 1000 N, additional draw hooks and cone tip 90°)

ATORN Tensile and compressive force display units for external force or torque recorders

with or without encoder (measurement channel extension)

Application:
Can be used in combination with external force and/or torque recorders for a wide range of testing tasks. The main areas of application for these handheld force testers are in quality assurance, incoming goods inspection, production, research and development.

Execution:
- Robust aluminium housing with ergonomic grip recesses
- Modern, colour touchscreen display 128x128 pixels, 7 digit + comma
- Data logger/measured value recording via built-in 2 GB memory, used via USB 3.0
- Exported data output to ASCII/CSV
- Adjustable measuring frequencies from 50 Hz to 2000 Hz
- **Ident. No. 400:** without encoder
- **Ident. No. 405:** with encoder (measuring channel extension) for connecting to a path measurement system (test stands) or for additional use of an external force or torque recorder

Advantage:
- For the use of external force and/or torque recorders with TEDS (Transducer Electronic Data Sheet) technology
- Rechargeable lithium-ion batteries ensure a long operating life
- Measured value display is flexible and intuitive to configure
- Two M6x10 mounting screws on each face and on the rear which can be used e.g. for a fixed installation
- **Ident. No. 405:** Encoder enables interactions with motorised load frames (test stands) for e.g. the display of force/path diagrams

Delivery:
Display unit; USB power supply unit; micro SD card 2 GB; CE declaration of conformity; manual

Notes:
TEDS (Transducer Electronic Data Sheet) enables “plug and measure”. The display unit allows in the sensor identification data, which is stored in the form of an electronic data sheet in the TEDS chip. This facilitates the use of external force and/or torque recorders significantly.

Software 924

for electronic tensile and compressive force measuring instruments

Application:
For data logging and evaluation of force measuring units, torque measuring units and measurement units with different physical variables. Readings are transmitted to a PC in the form of Excel-compatible CSV files and evaluated there in simplified form.

Execution:
- Live display of measured values as values and diagrams
- Recording of measurement curves with measuring frequency up to 2,000 Hz
- Test reports generated in pdf format
- manual evaluation of measuring points on curves
- Determining the graph’s gradient in the specified range, e.g. for determining the spring rate
- Diagram range for averaging can be limited using a slider
- Compatible with Windows 10

Advantage:
- Device is detected automatically and settings read
- Data stream is started and stopped by software
- Settings for measurement frequency, units and limits are synchronised with the device
- Test report editor with templates for tailoring the structure of reports
- Displays the force limits in a diagram

Notes:
Force/path diagram only in conjunction with tensile and compressive force measuring devices with a path encoder.

Prod. Gr. 486

ATORN tensile and compressive force recorder ZD1 (DIN 50100)

ready assembled incl. plug and TEDS module

Application:
Electric force sensors in the ZD1 model series are suitable for static and slightly dynamic compressive and tensile force measurements.

Execution:
- Robust design
- Incl. TEDS module (electronically stored data sheet)
- Pre-assembled with 3-m cables and connector configuration according to ATORN display unit ZD3
- Incl. factory calibration certificate

Advantage:
- Force sensor is automatically detected by the ATORN display unit ZD3
- All relevant data is loaded from the TEDS module into the ATORN display unit ZD3, thus no additional settings are required on the display unit
- If replacement is required, the measuring instrument does not need to be sent in

Delivery:
Force sensor with 3-m connection cable and measuring instrument plug, factory calibration certificate

Notes:
TEDS = Transducer Electronic Data Sheet according to IEEE 1451.4. An electronic data sheet stored in the force sensor, which contains all relevant data.

Technical data:
- Sensitivity of force sensor: 2 mV/V
- Max. supply voltage: 10 V

Compressive force recorder D1 (DIN 50100)

ready assembled incl. plug and TEDS module

Application:
Electric force sensors in the D1 model series are space-saving and their low height also makes them suitable for small installation spaces.

Execution:
- Robust design
- Incl. TEDS module (electronically stored data sheet)
- Pre-assembled with 3-m cables and connector configuration according to ATORN display unit ZD3
- Incl. factory calibration certificate

Advantage:
- Force sensor is automatically detected by the ATORN display unit ZD3
- All relevant data is loaded from the TEDS module into the ATORN display unit ZD3, thus no additional settings are required on the display unit
- If replacement is required, the measuring instrument does not need to be sent in

Delivery:
Force sensor with 3-m connection cable and measuring instrument plug, factory calibration certificate

Notes:

ATORN Compressive force recorder D2 (DIN 50100)

ready assembled incl. plug and TEDS module

Application:
Electric force sensors in the D2 model series are suitable for static and dynamic compressive force measurements in harsh environments. The ball-shaped pressure piece ensures correct force input and thus achieves excellent measurement results.

Execution:
- Robust design made of stainless steel, hermetically welded
- Incl. TEDS module (electronically stored data sheet)
- Pre-assembled with 3-m cables and connector configuration according to ATORN display unit ZD3
- High degree of accuracy
- Incl. factory calibration certificate

Advantage:
- Force sensor is automatically detected by the ATORN display unit ZD3
- All relevant data is loaded from the TEDS module into the ATORN display unit ZD3, thus no additional settings are required on the display unit
- If replacement is required, the measuring instrument does not need to be sent in

Delivery:
Force sensor with 3-m connection cable and measuring instrument plug, factory calibration certificate

Notes:
TEDS = Transducer Electronic Data Sheet according to IEEE 1451.4. An electronic data sheet stored in the force sensor, which contains all relevant data.

Technical data:
- Sensitivity of force sensor: 2 mV/V
- Cable length: 3 m
- Max. supply voltage: 15 V

ATORN Torque recorder DM1 (DIN 50100)

ready assembled incl. plug and TEDS module

Application:
The electric torque recorders in the DM1 model series are ideal for measuring static reaction torque.

Execution:
- Robust design with standard square connection
- Incl. TEDS module (electronically stored data sheet)
- Pre-assembled with 3-m cables and connector configuration according to ATORN display unit ZD3
- Incl. factory calibration certificate

Advantage:
- Force sensor is automatically detected by the ATORN display unit ZD3
- All relevant data is loaded from the TEDS module into the ATORN display unit ZD3, thus no additional settings are required on the display unit
- If replacement is required, the measuring instrument does not need to be sent in
- Ideal for permanent installation due to the high rigidity and accuracy
- Torque absorption on both sides, for e.g. torque tests (load/relief)

Delivery:
Torque recorder with 3-m connection cable and measuring instrument plug, factory calibration certificate

Notes:
TEDS = Transducer Electronic Data Sheet according to IEEE 1451.4. An electronic data sheet stored in the force sensor, which contains all relevant data.

Technical data:
- Model: DM1
- Design: TEDS module integrated
- IP protection class: IP 64
- Material: Steel, stainless
- Cable length: 3 m

ATORN Torque recorder DM2 (DIN 50100)

ready assembled incl. plug and TEDS module

Application:
The electric torque recorders in the DM2 model series are ideal for measuring static reaction torque.

Execution:
- Robust design with flange union
- Incl. TEDS module (electronically stored data sheet)
- Pre-assembled with 3-m cables and connector configuration according to ATORN display unit ZD3
- Incl. factory calibration certificate

Advantage:
- Force sensor is automatically detected by the ATORN display unit ZD3
- All relevant data is loaded from the TEDS module into the ATORN display unit ZD3, thus no additional settings are required on the display unit
- If replacement is required, the measuring instrument does not need to be sent in

ATORN Mounting flange for ATORN torque recorder

Application:
For mounting on e.g. a workbench. Enables torque testing directly at the workplace.

Execution:
- Flange plate with 1/2 inch square cutout
- **Ident. No. 745:**
- Adapter plate with support bearing
- includes spacers, screws and mounting

Test stand, model 101

for tensile and compressive force measuring instruments

Application:
For reliable acquisition of forces and paths, torques and angles required when inspecting materials and assemblies. Potential areas of application are, for example, incoming/outgoing goods inspection and occasional quality checks in production.

Execution:
- Height-adjustable test stand
- Lever-operated manual test stand
- Robust design, primarily for tensile and compressive forces up to 500 N

Advantage:
- Easy to use
- Sturdy guide pillar with cross beam on one side for high stability
- Cost-effective and high-quality solution for small-scale inspections

Technical data:
- Max. force range: 500 N
- Travel motion: Manual
- Overall stroke: 250 mm

42455...	Ident. No.	010 ○

Prod. Gr. 443

Example application: Test stand with tensile and compressive force measuring unit. Delivered without tensile and compressive force measuring unit

Test stand, model 102

for tensile and compressive force measuring instruments

Application:
For reliable acquisition of forces and paths, torques and angles required when inspecting materials and assemblies. Potential areas of application are, for example, incoming/outgoing goods inspection and occasional quality checks in production.

Execution:
- Manually-operated tensile/compression test frames
- Primarily for tensile and compressive forces up to 1000 N
- Basic device for correct positioning of torsion inspections
- When combined with a force measuring unit, this test frame forms a complete inspection machine

Advantage:
- Easy to use
- C-frame for high stability
- Cost-effective and high-quality solution for small-scale inspections

Technical data:
- Max. force range: 1000 N
- Travel motion: Manual
- Overall stroke: 495 mm

42455...	Ident. No.	020 ○

Prod. Gr. 443

Example application: Manual test stand with tensile force and compressive force measuring unit. Delivered without tensile force and compressive force measuring units.

Test stand, model 103

for tensile and compressive force measuring instruments

Application:
For reliable acquisition of forces and paths, torques and angles required when inspecting materials and assemblies. Potential areas of application are, for example, incoming/outgoing goods inspection and occasional quality checks in production.

Execution:
- Electronically-operated tensile/compression test frames
- Primarily for tensile and compressive forces up to 1000 N
- When combined with a force measuring unit, this test frame forms a complete inspection machine
- Integrated incremental travel measurement
- Automatic switch-off when limit values are reached
- Centrally-arranged drive spindle

Advantage:
- Easy to use
- High stability
- Cost-effective and high-quality solution for small-scale inspections

Technical data:
- Max. force range: 1000 N
- Travel motion: Motorised
- Overall stroke: 550 mm

42455...	Ident. No.	030 ○+

Prod. Gr. 443

Example application: Motor-driven test stand with ATORN ZD2 tensile force and compressive force measuring unit. Delivered without tensile force and compressive force measuring units.

ATORN Force measuring cell

Analogue measurement display

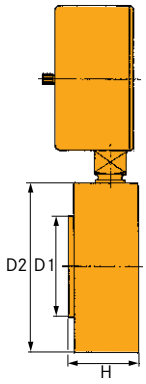
Application:
For static and quasi-static force measurement on machines and equipment, e.g. hydraulic presses, rolling machines, calenders, bending machines, strength testing machines, torque meters etc.

Execution:
- Analogue manometer, diameter 63 mm with trailing pointer
- Force measuring cell made from VA steel in slim design
- Integrated throttle damping
- Two M6 fixing threads on housing floor

Advantage:
- Very slim design for in constricted spaces
- Integrated throttle damping for light, abrupt loading and unloading

Delivery:
With calibration certificate, in plastic case

Technical data:
- Protruding piston height: 2 mm
- Fastening thread: 2 x M6
- Error limit, based on end value: +/- 2 %
- Manometer diameter: 63 mm



Min./max. force of measuring range	Scale value, force (kN)	Outer Ø (mm)	Overall height of force sensor (mm)	Piston Ø (mm)	Fastening thread clearance (mm)	Mean distance between manometer and force sensor (mm)	44420... Ident. No.

Prod. Gr. 490

METRON SIMPLEX force measuring cells with digital manometer

Application:
For static and quasi-static force measurement on machines and equipment, e.g. hydraulic presses, rolling machines, calenders, bending machines, strength testing machines, torque meters etc.

Execution:
- Force measuring cell made from VA steel in slim design
- 2x fixing threads on housing floor
- Error limit 0.5% of final value
- Optional: Shim required for non-fixed placement of the manometer in horizontal applications
- **Ident. No. 061:** Digital manometer, diameter 76.5 mm, 4 1/2-digit LCD display, 12.7 mm digit size, rotatable through 350°, with peak value memory
- **Ident. No. 090–160:** Digital manometer, diameter 74 mm, 4-digit LCD display, 12.7 mm digit size, rotatable through 350°, with peak value memory

Advantage:
- Very slim design for in constricted spaces
- Manometer rotatable through 350° for convenient reading in any installation position

Delivery:
With calibration certificate, in plastic case

Technical data:
- Protruding piston height: 2 mm
- Fastening thread: 2 x M6

Ident. No. 090–160

METRON® Force measuring cell

Flat shape

Application:
Particularly suitable for static and quasi-static force measurement of clamping forces on e.g. vices.

Execution:
- Analogue manometer, diameter 63 mm with trailing pointer
- Force measuring cell made from stainless steel
- Incl. factory inspection log

Advantage:
- Secure base due to flat shape
- High-quality stainless steel design

Delivery:
Force measuring cell incl. work calibration certificate, in plastic case

Technical data:
- Overall height of force sensor: 38 mm
- Protruding piston height: 2 mm
- Error limit, based on end value: +/- 2 %
- Manometer diameter: 63 mm

METRON® Force measuring cell

Flat shape, with small structural dimensions

Application:
Particularly suitable for static and quasi-static force measurement of clamping forces. Due to the small size, it is ideally suited for smaller vices.

Execution:
- Analogue manometer, diameter 100mm with trailing pointer
- Force measuring cell made from stainless steel
- Incl. factory inspection log

Advantage:
- Secure base due to flat shape
- High-quality stainless steel design

Delivery:
Force measuring cell incl. work calibration certificate, in plastic case

Technical data:
- Error limit, based on end value: +/- 1 %
- Manometer diameter: 100 mm

DriveTest Electronic closing force measuring instrument

for train doors and sliding steps

Application:
Electronic closing force measuring instrument for standard-compliant inspection of train doors and sliding steps.

Execution:
- Evaluation in accordance with EN 14752:2015, EN 14752:2005 (optional)
- Strain gauges
- Spacer for all opening angles in accordance EN 14752:2015
- **Ident. No. 025:** Bluetooth(R) wireless version
- **Ident. No. 030:** Wired version

Advantage:
- Automatic limit value setting through distance detection
- **Ident. No. 025:** Single-button or remote-control operation via Microsoft(R) DLL interface or National Instruments(R) LabView library
- **Ident. No. 030:** Single button operation or remote control via Microsoft® DLL interface or National Instruments® LabView library

Technical data:
- Min./max. force of measuring range: 0-700 N

Ident. No. 030

Electronic closing force measuring instrument

for bus and train doors as well as sliding steps

Application:
Electronic closing force measuring instrument for standard-compliant inspection of bus and train doors as well as sliding steps.

Execution:
- Class 1
- Evaluation in accordance with EN 14752:2005, VDV 111, 2001/85/EC
- Strain gauges
- **Ident. No. 005:** Wireless version
- **Ident. No. 010:** Wired version

Advantage:
- PinchPilot PC evaluation software, multilingual
- Process reliability: integrated test instruction ensures guideline-compliant measurements
- User guidance and evaluation in accordance with EN 14752:2005, VDV 111, 2001/85/EC
- Precise measurements guaranteed by six ball bearings in guide
- Measuring point identification using QR and barcodes (integrated solution)

Delivery:
Ident. No. 005: Closing force measuring device, PinchPilot software (USB stick), USB cable, manual, transport case with foam insert, ISO calibration certificate

Notes:
Ident. No. 005: PinchPilot PC evaluation software: - Multilingual (DE, EN, IT, FR, ES), graphical representation of force characteristics, calculation of important characteristic values, evaluation in accordance with a variety of guidelines (standards), option to input own guideline definitions, log print-out, data export (Excel, CSV, PDF)

Technical data:
- Min./max. force of measuring range: 25-310 N

Type description		BIA1BT-SY-10-310	BIA1-SY-10-310

Closing force measuring instrument

for doors and gates

Application:
Electronic closing force measuring instrument for standard-compliant inspection of doors and gates.

Execution:
- Evaluation in accordance with EN 12453:2017, EN 60335-2, DIN V 18650, ASR A1.7, DHF TS 011:2016 etc.
- Strain gauges
- **Ident. No. 035:** Bluetooth(R) wireless version
- **Ident. No. 040:** Wired version

Advantage:
- Precise measurements due to frictionless guide and load cell platform
- Measuring point identification using QR and barcodes (integrated solution)
- Upgrade option for existing devices
- Process reliability: integrated test instruction ensures guideline-compliant measurements
- Immediate assessment according to selected guidelines and standards

Technical data:
- Min./max. force of measuring range: 0-2000 N

Type description		FM100BT-SY-500-2000	FM100-SY-500-2000

Closing force measuring instrument
for sunroofs, power windows and tailgates

Application:
Electronic closing force measuring instrument for standard-compliant inspection of powered automotive windows, sunroofs and tailgates.

Execution:
- Wired version
- Application in accordance with latest standards
- Strain gauges
- SEB2 display unit with datalogger and storage for 100 measurements

Advantage:
- Precise measurements due to frictionless guide and load cell platform
- Single button operation or remote control via Microsoft® DLL interface or National Instruments® LabView library
- Comprehensive user support: Calibration service, standards updating service ensures application in accordance with the latest standards
- Comprehensive, professional PC software: PinchPilot

Delivery:
Measuring instrument, FM200 sensor, SEB2 measuring and display unit, 9 V block battery, transport case, PC connection cable (USB), USB data stick with PinchPilot PC evaluation software and documentation, manual, ISO calibration certificate

Technical data:
- Gap width: 4 mm

KERN Basic compact scales

Type FCB

Application:
Ideal for use in various locations.

Execution:
- Robust ABS housing with stainless steel weighing tray
- Backlit LCD display with 15 mm digit size
- AUTO-OFF function after 3 min. without load change
- Battery operation possible (1x type E-Block, 9 V, not included)
- Option: Battery operation
- PRE-TARE function for manual prior subtraction of known container weights
- Second display on the rear side
- Integrated KERN Universal Port (KUP): For connecting external KUP interface adapters, such as RS-232, USB, Bluetooth(R), Wi-Fi or Ethernet. (Adapter not included in scope of delivery.) This means that interfaces can easily be retrofitted without the need to open the scale housing and without complicated installation
- KERN Communication Protocol (KCP): The KCP allows for placing queries and remote control of the scales via external control units or computers

Advantage:
- Low weight for excellent mobility

Delivery:
Mains adapter

Technical data:
- Plate size: 225 x 252 mm
- With unit counting: Yes
- Interface: KUB | KERN Communication Protocol
- Housing dimensions (LxWxH): 270 x 325 x 105 mm

KERN Platform scales

Type DE-D

Application:
For versatile use in various locations such as production, warehousing and shipping.

Execution:
- Dual range scales with automatic switch-over
- Display unit (IP65 degree of protection, protected against water splashes) with 1.5 m cable
- freely programmable weighing unit, e.g. displays in thread length g/m, paper weight g/m2
- Recipe function for weighing different components
- Quantities, percentage determination, totalling function
- Backlit LCD display with 25 mm digit size

Advantage:
- Dual measurement display for finer digit increment and higher accuracy in the initial weighing range
- **Versatile positioning of display unit, free-standing or bolted to scales**

Delivery:
Mains adapter

Technical data:
- With unit counting: Yes
- Data transmission type: RS232

KERN Counting scales
Type CPB

Application:
For counting and weighing components

Execution:
- Counting total memory for adding up measured values
- Display: Total weight, reference weight in g, total quantity
- Large LCD display with 20 mm digit size and backlight function
- AUTO-OFF function can be selected after 1/5/30 min.
- Automatic reference optimisation
- Programmable acoustic signal on reaching quantity
- Options: Battery operation approx. 70 h without backlight possible

Delivery:
Mains adapter

Technical data:
- Plate size: 294 x 225 mm
- With unit counting: Yes
- Data transmission type: RS232
- Housing dimensions (LxWxH): 350 x 320 x 125 mm

KERN Counting system
CCS

Application:
Counting system consisting of reference scales and quantity weighing platform. Small parts can be weighed using the reference scale. The quantity weighing platform enables very large quantities to be counted in a single step

Execution:
- The highly accurate KERN CCS counting system does the work of a wide range of individual scales cost-effectively and efficiently
- Reference scales KERN CFS: These professional counting scales, which can also be used individually, also meet the highest demands for accuracy by connecting a high-load weighing bridge
- Programmable via keypad: desired reference quantity, known reference weight
- Three displays for weight display, reference weight, total number of pieces
- Memory (PLU) for 100 items with additional text, reference weight and tare weight e.g. of a container
- Fill-to-target function: Programmable target quantity or target weight. Achievement of the target value is indicated by an acoustic and visual signal
- Accurate counting: automatic reference optimisation gradually improves the average part weight
- KFP KERN quantity scales: Quantity counting is performed with high precision on the weighing platform (= weighing bridge). Even the smallest counting parts can be counted in large quantities
- Stainless steel weighing tray, steel base painted
- Aluminium single-point weighing cell (1×3000 e), dust and splash water protection IP65

Delivery:
with power supply unit and work protection hood

Technical data:
- With unit counting: Yes
- Data transmission type: RS232

Prod. Gr. 447

KERN Moisture analyser
Type DBS-60

Application:
The moisture content of the sample is reduce due to drying at higher temperatures. Reducing the liquid content in the sample results in a loss of weight. The device uses the weight loss to determine the original moisture content. Moisture analyser with high-quality single-cell weighing system for outstanding stability, reliability and response speed for samples with low moisture content, e.g. plastics

Execution:
- Halogen quartz glass heater 400 W
- Excellent temperature control thanks to halogen technology, suitable for temperature-sensitive samples
- Internal memory for the automatic execution of 10 drying programmes and 100 drying processes
- The last measured value remains on the display until it is overwritten by a new measurement
- Password protection to avoid tampering with stored settings, data etc.
- Sample description for up to 99 samples, 2 digits, freely programmable, printed in the measurement log
- Date and time display as standard feature
- Drying modes: Standard drying, phase drying, gentle drying, rapid drying
- Switch-off criteria: Automatic unrestricted switch-off (selectable loss in weight 0.01-0.1 % in 30 s), time-controlled switch-off (1 min to 12 h), manual switch-off at the press of a button
- USB data interface for transferring weighing data to PC or printer (only usable in conjunction with KERN DBS-A02 accessories)

Advantage:
- Application handbook: A practical application handbook containing many examples, field reports, settings and tips for each KERN moisture analyser is available online.

Delivery:
Protective cover, 10x sample plates

Notes:
Accessories such as data cables, sample trays etc. can be found in our online shop

Technical data:
- Min./max. humidity (rF) of measuring range: 0-100 %
- Min./max. dry content: 0-100 %
- Resolution humidity (rF): 0.01 %
- Reproduzierbarkeit bei Einwaage 10 g: 0.001 g
- Max. weight measuring range: 60 g
- Digit increment, weight: 0.001 g
- Linearity: 0.003 g
- Min./max. working temperature: 50 to 200 °C
- Temperatur-Intervall: 1 °C
- Data transmission type: RS232 | USB
- Digit height: 15 mm
- Plate diameter: 95 mm
- Housing dimensions (LxWxH): 252 x 162 x 57 mm

Prod. Gr. 447

KERN U-shaped pallet scales
Type UBI

Application:
for versatile use in various locations such as production, warehousing and shipping.

Execution:
- high mobility: battery operation and compact, lightweight design allow use in multiple locations
- load capacity: steel, powder-coated, 4 silicone-coated aluminium load cells
- IP67 dust and splash protection
- combining weight values and numerous parts
- scope of delivery includes protective hood
- 5-m evaluation unit cable length

Advantage:
- scales can easily be stowed and transported by means of rollers and handles

Delivery:
with mains adapter

Technical data:
- Weight: 55 kg

Type description		UIB 1.5T-4	UIB 3T-3	UIB 600K-1
Max. weight measuring range (kg)		1500	3000	600

Prod. Gr. 447

KERN Drive-through scales

Type NIB

Application:
Drive-through-scales for fast weighing of wire cage trolleys, laundry trolleys, shelf trolleys, container trolleys, push carts, transport carts, transport cases, pallet trucks, wheeled containers, waste bins etc. The low platform height and integrated loading ramps on both sides facilitate movement onto the scales. This means that no pit frame installation is necessary, saving money

Execution:
- Weighing bridge: Steel, powder-coated, four silicone-coated aluminium load cells, dust- and splash-proof to IP67. Bubble vial for exact levelling of the scales as standard equipment
- Scales can easily be transported and stowed to save space thanks to castors and handles
- Wall bracket for mounting the evaluation unit on the wall included as standard equipment (only for models without a stand)
- The display device is connected to the weighing bridge via a 5 m cable

Advantage:
- Maximum mobility

Delivery:
in a robust wooden box, incl. protective cover

Max. weight measuring range (kg)		300	600

Prod. Gr. 447

KERN Weighing table for laboratory and analysis scales

Type YPS-03

Application:
For more accurate weighing results - suitable for all KERN analytical scales with overall dimensions ≤W×D 400×450 mm

Execution:
- The KERN YPS-03 weighing table is designed to absorb shocks and vibrations that would otherwise falsify the weighing result
- The YPS-03 weighing table consists of: - a 24 kg polished granite stone plate, which is stored on absorbent rubber elements and serves as a stand for the analytical scales - a workbench whose worktop surrounds the stone plate and offers many storage possibilities. The stable aluminium profile frame has four height-adjustable feet, with the help of which the weighing table can be levelled precisely in case of any ground unevenness
- The weighing table has been ergonomically optimised and can be operated while standing or comfortably sitting. The recess at the front of the table provides enough space for seating and for the operator of the scales without touching the weighing table
- All surfaces are hygienic and easy to clean
- for absorbing shocks and vibrations

Length x width x height		800 x 600 x 785 mm
Weight (kg)		46

KERN Test weights

Single block weights, incl. DAKKS calibration certificate

Application:
For testing, calibrating and adjusting scales

Execution:
- In accordance with OIML class M1
- Made of ground and painted cast iron. With integrated handle for lifting the weight manually or using lifting equipment. Also suitable for suspended and crane scales.
- Incl. DAkkS calibration certificate

Technical data:
- Type description: Block weight

Weight (kg)			5	10	20

Test weights, supporting bar and slot weights

Single weights incl. DAkkS calibration certificate

EXTENDED PROGRAM

Application:
For testing, calibrating and adjusting scales. Intermediate weights may also be realised by combining several weights, e.g. for saving target weights for articles included in the memory of the scales (if so equipped)

Execution:
- In accordance with OIML class M1
- Weights weighing 1 g and above are made of high-grade steel, finely turned, as slotted weights, for fixing onto the supporting bar.
- incl. DAkkS calibration certificate

Notes:
The supporting bar forms the basis for slotted weights and is part of the total weight.

Further information, advice and quotations available on request.

ORION® Temperature measuring instrument with universal sensor

With universal probe

Application:
For simple temperature measurements in industrial applications

Execution:
- Watertight
- HOLD function
- Auto-off
- Switch between °C/°F
- Error limit ± 1% ±1°C

Notes:
Can only be used with supplied sensor up to 550°

Min./max. temperature measuring range		-64 to 1370 °C
Digit increment (measuring instrument for temperature) (°C)		0.1
Length x width x height		78 x 43 x 20 mm
46105...	Ident. No.	200 ●

Prod. Gr. 456

ORION® Temperature measuring instruments

2-channel

Application:
For measuring temperature differences

Execution:
- Displays differential temperature
- 2 simultaneous measurements
- USB interface
- Input for thermocouple, type K
- Digit increment 0.1°C from -199.9°..+199.9°C, otherwise 1.0°C
- Error limit ± 0.1% ±0.7°C

Delivery:
Measuring instrument, battery, 2x type K thermocouple wire, length 90 cm, measuring range -50° to +200°, operating instructions

Min./max. temperature measuring range			-200 to 1370 °C
Length x width x height			184 x 64 x 30 mm
46105...	2-channel	Ident. No.	220 ●

Prod. Gr. 456

Temperature sensor

Application:
Ident. No. 310–320: For measurements in liquid, gaseous and powdery materials
Ident. No. 330–340: For measuring surface temperatures
Ident. No. 350: For measuring temperatures, e.g. in furnaces

Execution:
- NiCr-Ni sensor
- **Ident. No. 310:** Stainless steel
- **Ident. No. 320:** Flexible
- **Ident. No. 330:** Straight
- **Ident. No. 340:** Curved
- **Ident. No. 350:** Glass-fibre-insulated

Technical data:
- Cable length: 1 m

Temperature measuring instrument
Models 905-T1 and 905-T2

Application:
Ident. No. 580: Ideal for temperature measurements in liquids, soft or powdery substances as well as in the air.
Ident. No. 590: Ideally suited for surface temperature measurements even on uneven surfaces.

Execution:
- Measuring range briefly up to 500°C

Advantage:
- Easy read-off of readings due to rotatable display
- High temperature measurement, up to +500°C short term
- Very fast response time

Ident. No. 580 | Ident. No. 590

Prod. Gr. 4CF

Digital 1-channel temperature measuring instrument (EN standard 13485)
Model: testo 110

Application:
The temperature measuring instrument testo 110 is a particularly accurate temperature measuring device suitable for universal use. Ideal for use in harsh environments. Sensor connection for NTC and Pt100 sensors.

Advantage:
- Quick, easy and particularly accurate temperature measurement with NTC or Pt100 sensors
- Fast in-app configuration, graphic progression display, second screen and measurement data memory in the testo Smart App
- HACCP-compliant, certified to EN 13485 for use in the food industry
- Very precise measurements and high system accuracy with digital Pt100 sensors (calibration without measuring instrument)
- 2-line, illuminated display for easy reading

Delivery:
Temperature measuring instrument testo 110, 3x AA batteries, calibration log and transport bag.

Notes:
Required accessories: A sensor is required for commissioning. The measuring accuracy mirrors of the accuracy of the sensor and the accuracy of the device.

Min./max. temperature measuring range		-50 to +150 °C
Digit increment (measuring instrument for temperature) (°C)		0.1
Length x width x height		135 x 60 x 28 mm
Compatible with		Sensor type NTC
46105...	Ident. No.	515 ●

Prod. Gr. 4CF

Digital 2-channel temperature measuring instrument
Model: testo 922

Application:
The temperature measuring instrument testo 922 is especially suitable for fast (differential) temperature measurements. The measuring instrument records the temperature values from two connected thermocouple sensors and displays them and the differential temperature in the display simultaneously.

Execution:
- Incl. 2x thermocouple TE type K sensors (46108195)

Delivery:
Temperature measuring instrument, 2x TE type K sensors, 3x AA batteries, calibration log, transport bag

Min./max. temperature measuring range		-50 to 1000 °C
Digit increment (measuring instrument for temperature) (°C)		0.1
Length x width x height		135 x 60 x 28 mm
46105...	Ident. No.	565 ●

Prod. Gr. 4CF

Digital 1-channel temperature measuring instrument

Model: testo 925

Application:
For fast and precise temperature measurements in industry and trade.

Execution:
- Incl. 1x thermocouple TE type K sensors -50° to +400°C (46108195)
- Sensor accuracy: ±(0.5°C + 0.3 % of measured value) (-50 to +1000°C)
- Sensor resolution: 0.1°C (-50 to +499.9°C), 1°C (residual measuring range)

Advantage:
- Simple, fast and precise temperature measurement with type K thermocouple sensor
- Fast in-app configuration, graphic progression display, second screen and measurement data memory in the testo Smart App
- Wide variety of applications with extensive measuring range from -50°C to 1000°C
- Wide range of sensors optional and compatible with standard TE Type K sensors

Delivery:
Temperature measuring instrument, 3x AA batteries, TE type K sensor, calibration log, carrying case

Technical data:
- Model: testo 925
- Min./max. temperature measuring range: -50 to 1000 °C
- Accuracy temperature: +/- 0.5°C + 0.3 % of measured value at -50 to +1000°C
- Digit increment (measuring instrument for temperature): 0.1 °C
- Length x width x height: 135 x 60 x 28 mm
- Compatible with: Sensor type K (NiCr-Ni)

Prod. Gr. 4CF

DampMaster Compact Pro material moisture measuring device

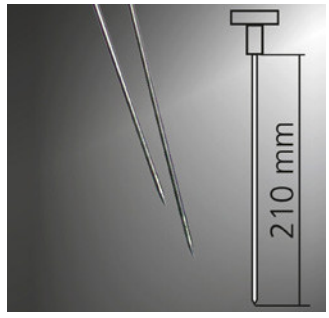
for insertion, with additional deep-insertion electrodes

Application:
Professional measuring instrument for measuring wood, plaster, construction material and material moisture. Can be specifically used in deeper material layers due to depth electrodes.

Execution:
- Resistance measuring method (measuring tips), insertion
- Digital Connection interface and free MeasureNote app for rapid data transfer to a mobile device
- Number of building materials/ percent by weight: 31
- Number of wood types: 108
- Dry/wet moisture indicator
- Protective cap with self-test function
- Depth electrodes for connecting “DampExtensions”
- Accuracy: wood ±0.3 % of final value ±5 digit
- Accuracy: building materials ±0.5 % of final value ±1 digit

Advantage:
- MeasureNote support with integrated material tables
- Wet/dry indicator: Results are evaluated and interpreted in relation to the material
- Reaches depths of up to 210 mm due to “DampExtensions” measurements

Delivery:
incl. battery (4x AAA), protective cap with self-test function, DampExtension set with 4 pairs of depth electrodes and connecting cable, in carry case



Model		DampMaster Compact Pro
Min./max. humidity (rF) of measuring range		0-171.2 %
Min./max. wood moisture		0-60 %
46500...	Ident. No.	020 ●

Prod. Gr. 3EE

Material moisture measuring device MoistureMaster Compact Plus

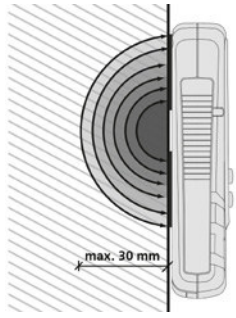
Non-destructive

Application:
Professional, quick and non-destructive material moisture measurement.

Execution:
- Capacitive measuring method (contact surfaces), non-destructive
- Digital Connection interface and free MeasureNote app for rapid data transfer to a mobile device
- Number of building materials/ percent by weight: 6
- Number of building materials/ percent CM: 2
- Number of wood types: 56
- Dry/wet moisture indicator
- Index zoom - Quickly locate moisture in denser building material
- Accuracy: wood +/-2 %; building materials +/-0.2 %

Advantage:
- Wet alarm: When wet material is detected, a warning tone sounds in addition to the red LED display
- 25 languages

Delivery:
incl. battery (1x 9 V block) and carry case



Model		MoistureMaster Compact Plus
Min./max. humidity (rF) of measuring range		0-66.5 %
Min./max. wood moisture		3-56.4 %
46500...	Ident. No.	000 ●

Prod. Gr. 3EE

Laserliner Material moisture measuring device MultiWet-Finder

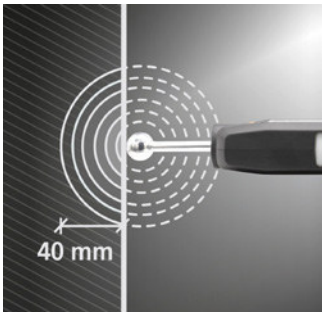
with additional ambient temperature and calculated dew point

Application:
Electronic material moisture measuring instrument for locating and evaluating moisture distribution and moisture damage in walls, floors and ceilings.

Execution:
- Capacitive measuring method (sphere), non-destructive
- Digital Connection interface and free MeasureNote app for rapid data transfer to a mobile device
- Number of building materials/ percent by weight: 3
- Number of building materials/ percent CM: 3
- Dry/wet moisture indicator
- Indoor climate: temperature, humidity, dew point
- Humidity (absolute): 20 % to 80 % (±3 %)
- Humidity (relative): <20 % and >80 % (±5 %)

Advantage:
- Audible alarm and 12-digit LED display with configurable limit value

Delivery:
incl. battery (3x AAA) and carry case



Model		MultiWet-Finder Plus
Min./max. temperature measuring range		-10 to 60 °C
Min./max. air humidity		20-90 %
Digit increment (measuring instrument for temperature) (°C)		0.1
Resolution humidity (rF) (%)		0.1

PCE INSTRUMENTS Humidity detector for measuring water activity

PCE-WAM 10 and PCE-WAT 10 models

Application:
The humidity detector is a mobile measuring instrument for measuring water activity in samples. The water activity indicates the amount of water that is biologically available to bacteria, mould or similar microorganisms. The humidity detector can be used in the food industry, when testing water activity in laboratories, in seed storage and other areas.

Execution:
- Water activity measuring range: 0.01 to 1 aw
- Water activity resolution: 0.01 aw
- **Ident. No. 350:**
  - Water activity accuracy: ±0.03 aw
  - Temperature measuring range: 0 to +50 °C
  - Temperature resolution: 0.1 °C
  - Temperature accuracy: ±1 °C
- **Ident. No. 352:**
  - Water activity accuracy: ±0.02 aw
  - Temperature measuring range: -10 to +60 °C
  - Temperature resolution: 0.01 °C
  - Temperature accuracy: ±0.2 °C
  - Storage for 99 measurements
  - Real-time measurement software

Delivery:
Ident. No. 350: with 3x sample trays, 2x AAA batteries, operating instructions, in case
Ident. No. 352: includes 5x sample trays, 3x AAA batteries, USB cable, software, operating instructions, in case

testo Thermohygrometer

Model testo 608 H1/608 H2

Application:
Ideal for continuously measuring the indoor climate in offices, warehouses, laboratories, plant nurseries or living areas. Determines temperature, humidity and dew point.

Execution:
- Display of maximum and minimum values
- **Ident. No. 050:** Visual alarm when limit is exceeded

Advantage:
- Durable humidity sensor
- Continuous measurement and display of temperature and relative humidity
- Calculation and display of dew point
- Large, easy-to-read display
- **Ident. No. 040:** Hanging and standing device for mounting on a wall or placing on a table
- **Ident. No. 050:** Suspended or stand-alone device for mounting on a wall or placing on a table

Thermohygrometer
Model testo 610

Application:
Ideal for rapid and accurate measurement of temperature and humidity indoors. The compact device can also calculate the dew point and wet bulb temperature.

Advantage:
- Simple temperature and humidity measurement
- Dew point and wet bulb temperature calculation
- Capacitive moisture sensor with long-term stability for precise measurement results
- Illuminated, easy-to-read display

Delivery:
Thermohygrometer testo 610 including protective cap, calibration log, belt pouch and batteries.

Model		testo 610
Min./max. temperature measuring range		-10 to 50 °C
Accuracy temperature		+/- 0.5°C
Digit increment (measuring instrument for temperature) (°C)		0.1

Prod. Gr. 4CF

Digital thermohygrometer
Model: testo 625

Application:
The compact testo 625 thermohygrometer with plug-in humidity sensor is suitable for measuring air temperature and relative humidity and additionally calculates dew point and wet bulb temperature. Ideal for use where climate plays an important role, e.g. in archives, storage rooms, greenhouses, residential buildings and workplaces.

Advantage:
- Simple, rapid and precise measurement of air temperature and relative humidity
- Dew point and wet bulb temperature calculation
- Fast in-app configuration, graphic progression display, second screen and measurement data memory in the testo Smart App
- Audible alarm when limit is exceeded

Delivery:
Humidity/temperature measuring instrument, 3x AA batteries, calibration log, transport bag

Min./max. temperature measuring range		-20 to +60 °C
Accuracy temperature		+/- 0.5°C
Digit increment (measuring instrument for temperature) (°C)		0.1

Infrared thermometer
Model testo 810

Application:
Infrared thermometer for simultaneous, non-contact measurement of surface and air temperature.

Execution:
- Temperature measuring range with NTC sensor: -10°C to +50°C
- Temperature accuracy with NTC sensor: +/- 0.5°C
- Temperature resolution with NTC sensor: 0.1°C

Advantage:
- simultaneous measurement of surface and air temperature
- automatic display of the temperature difference
- adjustable emission level
- Temperature measuring range with NTC sensor: -10°C to +50°C

Delivery:
Infrared thermometer testo 810 with integrated NTC temperature sensor including protective cap, calibration protocol, belt bag and batteries.

Model		testo 810
Measuring rate		2 measurement/s
Min./max. temperature measuring range		-30 to 300 °C
Digit increment (measuring instrument for temperature) (°C)		0.1
Accuracy temperature		+/- 2,0°C at -30 to +100°C | +/- 2 % of measured value (remaining measuring range)
Sensor type		Infrared sensor

Infrared thermometer with 1-point laser marking

testo 830-T1

Application:
Ideal for fast and contactless surface temperature measurement.

Execution:
- clear, illuminated digital display
- 1-point laser spot marker for targeting the measurement point
- 10:1 optics for accurate measurements at smaller to medium distances

Advantage:
- Hold function (for holding a reading)
- comfortable one-handed operation thanks to ergonomic pistol design
- accurate and fast surface temperature measurement (2 measurements per second)
- high resolution processor for high precision (resolution 0.1°C)

Delivery:
Infrared thermometer including batteries and calibration protocol

Notes:
For bare surfaces with low emission levels, it is recommended to use adhesive emission tape

Model		testo 830-T1
Number of laser markings		1-point
Measuring rate		2 measurement/s
Min./max. temperature measuring range		-30 to 400 °C
Digit increment (measuring instrument for temperature) (°C)		0.1
Accuracy temperature		+/- 1,5°C or +/- 1,5 % of measured value +0,1 up to +400°C | +/- 2°C or +/- 2 % of measured value at -30 up to 0°C
Min./max. emission ratio		0.1-1.0
Emissivity adjustable		In steps 0.01

ORION® Video infrared temperature measuring instrument with integrated humidity sensor

Application:

For non-contact measuring of dew points and surface temperatures. Ideal for indoor climate specialists. Indoor climate measurements

Execution:

- Double target laser
- HOLD, MAX, MIN functions
- Switch display between °C/F
- USB port
- Error limit ±2% or ± 2°C

Advantage:

- Large 2.2 inch TFT colour display
- Input for thermocouple sensor NiCrNi (type K)
- Large measured value memory (micro-SD card slot)
- IR temperature measuring device with integrated humidity sensor
- Applications are displayed as JPG images with measured values and date stamps

Delivery:

in robust transport case, USB cable, mains plug with USB connection, incl. type K temperature probe, incl. 3.7 V Li-ion battery pack 1,400 mAh, small three-leg camera tripod

TE Type K - Surface sensor (EN standard 60584-1)

responsive

Application:

Ident. No. 070: The extremely fast surface temperature sensor with spring-loaded thermocouple strip is suitable for versatile applications - even for non-flat surfaces.

Ident. No. 085: Thanks to the angled sensor tube, the responsive surface sensor enables a precise and reliable measurement of the surface temperature even in hard-to-reach areas. Also for non-flat surfaces.

ORION® Temperature/humidity measuring instrument

Application:
For measuring indoor climates

Execution:
- Running display
- Max-hold display
- Min-hold display
- Energy-saving Auto-OFF function

Advantage:
- Handy device size and easy one-hand operation
- Automatic display illumination with brightness sensor
- Large digits for clear view of measured values

Delivery:
Battery (1x 9 V block battery, type 6 LR 61)

Technical data:
- Min./max. temperature measuring range: -20 to 60 °C
- Temperature error limit: 0.5 °C
- Min./max. humidity (rF) of measuring range: 0-99 %
- Humidity (rF) error limit/conditions: 5 % / from 20 to 70%
- Humidity (rF) error limit, residual area: 7 %
- Humidity (rF) error limit (+/-): 5 %

46210...	Ident. No.	010 ●

Prod. Gr. 456

ORION® Flow meter (anemometer)

Application:
For simple measurements of air-conditioning ventilation systems.

Execution:
- Running display
- Max-hold display
- AVG display (average value)
- Switch between units of display: m/s, km/h, ft/min., MPH, knots
- Energy-saving Auto-OFF function

Advantage:
- Handy device size and easy one-hand operation
- Automatic display illumination with brightness sensor
- Large digits for clear view of measured values

Delivery:
Battery (1x 9 V block battery, type 6 LR 61)

Technical data:
- Min./max. current of measuring range: 0.4-25 m/s
- Digit increment, current: 0.01 m/s
- Current error limit (+/-): 0.45 m/s

46210...	Ident. No.	020 ●

Prod. Gr. 456

ORION® Light intensity measuring instrument (luxmeter)

Application:
For monitoring lighting conditions in workplaces, warehouses, industrial buildings and residential buildings.

Execution:
- Automatic zero point calibration
- Max-hold display
- Switch between units of display: LUX Fc
- Energy-saving Auto-OFF function

Advantage:
- Handy device size and easy one-hand operation
- Automatic display illumination with brightness sensor
- Large digits for clear view of measured values

Delivery:
Battery (1x 9 V block battery, type 6 LR 61)

Min./max. illumination of measuring range		0-40000 lx
Digit increment illuminance (lx)		0.01
Illumination error limit (+/-) (lx)		5
Min./max. working temperature		0 to 40 °C

Prod. Gr. 456

testo Digital illuminance measuring instrument

Model: testo 540

Application:
For checking light conditions in workplaces, storage halls, industrial and residential buildings.

Advantage:
- Simple, rapid and precise measurement of illuminance (lux) for all common light sources based on v-Lambda curve
- Wide range of applications thanks to LED compatibility (excluding single-colour blue LED)
- Fast in-app configuration, graphic progression display, second screen and measurement data memory in the testo Smart App
- Audible alarm when limit is exceeded

Delivery:
Lux measuring instrument, 3x AA batteries, calibration log, transport bag

Min./max. illumination of measuring range			0-100000 lx
Digital illuminance measuring instrument	46210...	Ident. No.	160 ●

Prod. Gr. 4CF

ORION® Sound level measuring instrument

Application:
Ideally suited for control measurements in air-conditioning or heating applications, at combustion plants as well as for assessing
noise pollution on machines and at the workplace.

Execution:
- Running display
- Max-hold display
- Min-hold display
- Energy-saving Auto-OFF function

Advantage:
- Handy device size and easy one-hand operation
- Automatic display illumination with brightness sensor
- Large digits for clear view of measured values

Delivery:
Battery (1x 9 V block battery, type 6 LR 61)

Technical data:
- Min./max. sound-pressure-level measuring range: 40-130 dB
- Digit increment, sound-pressure level: 0.1 dB
- Sound-pressure-level error limit (+/-): 3.5 dB
- Min./max. working temperature: 0 to 40 °C

46210...	Ident. No.	040 ●

Prod. Gr. 456

testo Sound level measuring instrument
Model testo 815

Application:
Ideally suited for control measurements in air-conditioning or heating applications, on combustion plants as well as for assessing noise pollution on machines and at the workplace.

Execution:
- Maximum and minimum value memory
- Switchable time evaluation, fast/slow

Advantage:
- Frequency evaluation according to characteristic curve A and C
- Easy to adjust

Min./max. sound-pressure-level measuring range		32-130 dB
Digit increment, sound-pressure level (dB)		1.0
Sound-pressure-level error limit (+/-) (dB)		1.0
Min./max. working temperature		0 to 40 °C

ORION® Data logger for temperature and humidity

Application:
For environmental monitoring, e.g. during transportation and storage

Execution:
- Large display for current value indication and
- External temperature sensor connection
- Battery status indication
- User-friendly Windows software
- Hi-Lo visual and acoustic alarm
- Memory for up to 60,000 measured values with 3 variables
- Measuring interval adjustable from 1 second up to 24 hours
- High accuracy: ±0.5°C/± 3%
- **Ident. No. 020:** Additional measurement of relative air humidity and dew point

Delivery:
USB data cable, Windows software on CD and battery (1x 3 V lithium type CR2032)

2-channel temperature and humidity data logger

Model testo 175 H1

Application:
For monitoring temperature and relative humidity in working and storage rooms.

Advantage:
- Measured data memory for up to 1,000,000 readings
- fast response time thanks to NTC-capacitive stub humidity sensor
- Wall bracket with lock, protects the data logger against unauthorised access
- programmed limits, min and max values, dew point can be read directly on the display

Delivery:
including wall bracket, lock, battery (3 x micro type AAA) and calibration log.

Model				testo 175 H1
Min./max. temperature measuring range				-20 to 55 °C
Digit increment (measuring instrument for temperature) (°C)				0.1
Accuracy temperature				+/- 0,4°C at -20 to +55°C ±1 Digit
Min./max. humidity (rF) of measuring range				0-100 %
IP protection class				IP 54
Number of ducts (PCS)				2
Data transmission type				SD
Interface				Mini-USB | SD card

Data loggers with integrated sensors

for temperature, humidity, air pressure, light and acceleration via vibration sensors

Application:
For storing relevant measured variables such as temperature, relative humidity, atmospheric pressure, light and acceleration over three axes using a vibration sensor. This data logger is therefore excellently suited to monitoring vibrations on machines while simultaneously measuring and recording relevant environmental conditions surrounding the system.

Execution:
- Three-axis acceleration up to 800 Hz
- Measuring range: ±16 g
- Precision: ±0.24 g
- Measuring/storage rate: 1 Hz to 1,600 Hz
- 2.5 million measured values per measurement
- 3.2 billion measured values when using the included 32 GB microSD memory card

Advantage:
- compact design: 87 x 44 x 23 mm

Delivery:
PCE-VDL 16I data logger, USB to Micro USB data cable, 32 GB SD memory card, sliding element for SD card, USB flashdrive with PC software and operating instructions

Type description		PCE-VDL 16I
Min./max. temperature measuring range		-20 to 65 °C
Min./max. humidity (rF) of measuring range		0-100 %
Min./max. illumination of measuring range		0.045-188000 lx
48601...	Ident. No.	**070** ○

Prod. Gr. 4AD

Data logger with integrated sensor

for 3-axis acceleration up to 1,600 Hz

Application:
The PCE-VDL 24I data logger even comes with an acceleration sensor with a sampling rate of 1,600 Hz. The shock and vibration logger is therefore ideal for the fields of fault diagnosis, stress testing, machine inspection, shock measurements and preventive maintenance.

Execution:
- Three-axis acceleration up to 1,600 Hz
- Measuring range: ±16 g
- Precision: ±0.24 g
- Measuring/storage rate: 1 Hz to 1,600 Hz
- 2.5 million measured values per measurement
- 3.2 billion measured values when using the included 32 GB microSD memory card

Advantage:
- compact design: 87 x 44 x 23 mm

Type description		PCE-VDL 24I

Prod. Gr. 4AD

Particle counter

Application:
Particle counters equipped with various sensors for measuring HCHO (formaldehyde), TVOC (volatile organic substances) and for monitoring ambient temperatures and ambient humidity.

Execution:
- Particle concentration: 0 to 2,000 µg/m³
- HCHO measuring range: 0.00 to 5.00 mg/m³
- HCHO resolution/accuracy: 0.01 mg/m³/±5 % of measured value
- TVOC measuring range: 0.00 to 9.99 mg/m³
- TVOC resolution/accuracy: 0.01 mg/m³/±5 % of measured value
- Measuring range, temperature: 0 to 50 °C
- Temperature resolution/accuracy: 0.1 °C/±2 °C
- Measuring range humidity: 0 to 100 % RH
- Humidity resolution/accuracy: 0.1 % RH/±5 % at (0 to 20 %), ±3.5 % at (20 to 80 % RH), ±5 % at (80 to 100 %)
- Storage for 5,000 measured values

Delivery:
PCE-EM 880 particle counter, Micro USB cable, operating instructions

Type description		PCE-EM 880
48603...	Ident. No.	010 ○

Prod. Gr. 4AD

Particle counter with data logger

Application:
This particle counter with data logger is ideal for monitoring air quality in workplaces and for continuously logging air temperature, humidity, CO2, PM2.5 and atmospheric pressure. All of these parameters provide occupational health and safety specialists with information on the air quality. The CO2 data logger stores the measured values on an SD memory card.

Execution:
- PM2.5 fine dust measuring range: 0 to 250 µg/m³
- Humidity measurement range: 5 to 95 % RH
- Humidity resolution/accuracy: 0.1 % RH/> 70 % RH ±3 % of measured value + 1 % RH, < 70 % RH ±3 % of measured value
- Measuring range, temperature: 0 to 50 °C
- Temperature resolution/accuracy: 0.1 °C/±0.8 °C
- CO2 measuring range: 0 to 10,000 ppm
- CO2 resolution/accuracy: 1 ppm/< 1,000 ppm: ± 40 ppm, < 3,000 ppm: ±(50 ppm + 3 % of measured value), >3,000 ppm: ±(50 ppm + 5 % of measured value)
- Atmospheric pressure measuring range: 10 to 1,100 hPa
- Atmospheric pressure resolution/accuracy: 0.1 hPa/±1.5 hPa

Delivery:
PCE-AQD 20 particle counter, 9 V/1 A plug-in power supply, operating instructions

Type description		PCE-AQD 20
48603...	Ident. No.	005 ○

Prod. Gr. 4AD

Hygiene measuring instrument - luminometer
for surfaces and water

Application:
For quick and easy checking of cleanliness using test tubes. The luminometer displays a measurement result on the large LCD display after just 10 seconds. Up to 10,000 measurement data sets with time and date can be stored on the internal memory of the luminometer.

Execution:
- Detection method: analogue integration by photodiodes
- Data output: RLU (relative light unit)
- Measuring range: 0 to 999,999 RLU
- Error limit: ±5 RLU
- Self-diagnosis: Automatic cleanliness check before each use
- **Ident. No. 020:** including 100 test tubes for surfaces
- **Ident. No. 025:** including 100 test tubes for water
- **Ident. No. 030:** including 200 test tubes, 100 for surfaces and 100 for water

Advantage:
- automatic cleanliness check before each use
- HACCP concept implementation
- Data transfer to analysis software via USB or Bluetooth(R)
- automatic self-calibration

Delivery:
PCE-ATP 1 luminometer, 3.7 V/2,300 mAh Li-ion rechargeable battery, USB cable, USB charger, lanyard, PC software (in the manufacturer's download area), test tubes

Multi-parameter photometer series CP

For comprehensive analysis of liquids

Application:
The multi-parameter photometer is a mobile measuring instrument for analysing fluids for various parameters such as pH value, chlorine etc.

Execution:
- selectable units including mg/l, ppm
- Bluetooth(R) data
- 503 nm/570 nm/620 nm LED

Delivery:
with extensive accessories, batteries, operating instructions, in case

Notes:
Some models can evaluate other parameters.

pH value analysis measuring device PCE-PH 228

with standard probe

Application:
pH analyser with GLP data management for measuring pH or redox value and temperature using external sensors.

Execution:
- fast, precise pH and temperature measurement
- Redox measurement (with optional electrode)
- GLP data management
- simple 2-, 3-, 4- and 5-point calibration
- Graphic display of the measurement history
- Data logger for 100 recordings with 100,000 data points each

Advantage:
- 32 GB internal memory
- High accuracy ±0.002 pH + 2 digits
- Users with password protection
- Permanent measurement verification (PMV) with coloured bars, measured value is displayed in relation to the calibration range

Delivery:
with PE-03 pH electrode, temperature sensor, USB-C cable, quick start guide, in service bag

Notes:
Electrode for redox measurement not included in scope of delivery.

Vibration measuring instrument

battery-powered, with measured value storage and data logger

Application:
For the rapid testing of oscillation/vibrations e.g. on machines and systems. This vibration measuring instrument directly displays the vibration acceleration, the vibration velocity and the vibration displacement.

Execution:
- robust plastic housing
- high-contrast, backlit, 2.8 inch colour LCD display
- Measuring functions: RMS, peak, peak-peak, crest factor
- PCE-VT 3xxx SENSOR with spiral cable
- internal memory for 99 folders, each containing 50 measured values
- Data logger with 50 memory locations, each with space for 43,200 measured values
- **Ident. No. 612, 618:** PCE-VT VMH magnetic adapter
- **Ident. No. 615, 621:** PCE-VT NP needle sensor
- **Ident. No. 618–621:** Headphones

Advantage:
- automatic ISO 10816-3 assessment
- easy-to-understand, reliable user guidance

Vibration measuring instrument

battery-powered, with measured value storage and data logger, with FFT analysis and route measurement

Application:
For the rapid testing of oscillation/vibrations e.g. on machines and systems. This vibration measuring instrument directly displays the vibration acceleration, the vibration velocity and the vibration displacement.

Execution:
- robust plastic housing
- high-contrast, backlit, 2.8 inch colour LCD display
- Measuring functions: RMS, peak, peak-peak, crest factor
- PCE-VT 3xxx SENSOR with spiral cable
- internal memory for 99 folders, each containing 50 measured values
- Data logger with 50 memory locations, each with space for 43,200 measured values
- includes FFT analysis and route measurement
- **Ident. No. 624, 630:** PCE-VT VMH magnetic adapter
- **Ident. No. 627, 633:** PCE-VT NP needle sensor
- **Ident. No. 630–633:** Headphones

Advantage:
- automatic ISO 10816-3 assessment
- easy-to-understand, reliable user guidance

Notes:
In FFT mode, the frequency spectrum for the measured vibration velocity or vibration acceleration is calculated and displayed. The calculated FFT lines are displayed in a graphic representation in an overall view for the entire frequency band and in a zoom view to display the individual lines. The route measurement has been specifically designed with recurring measurements at identical measuring points in mind. This enables the organised measurement of different measuring points. For this reason and due to its comprehensive measuring functions, the vibration measuring instrument is used for machine maintenance and repair tasks.

Belt tension measuring instrument

Application:
For fast, accurate measurements of belt tension and belt vibration frequency on e.g. machines and plants.

Execution:
- Belt tension displayed in N
- 6 menu languages: German, English, Spanish, French, Italian, Dutch
- Memory for 750 measured values
- Sensor on goose neck
- Input belt length and weight
- Measuring range: 10 to 900 Hz
- Precision: ± (1 % of measured value + 4 digit)
- Repeat accuracy: ± 1 Hz
- Resolution: <100 Hz: 0.1 Hz, >100 Hz: 1 Hz
- **Ident. No. 050:** Sensor length: 16 cm
- **Ident. No. 055:** Sensor length: 25 cm

Advantage:
- Calculates tensioning force/pre-tension
- internal memory for 750 measured values in 15 folders of 50 measured points each

Delivery:
Belt tension measuring device, standard sensor head, 3x 1.5 V AA batteries, operating instructions, carry bag, software for download

Multi-function vibration measuring device MC 1100

for measuring vibration, speed, temperature and belt tension

Application:
MC 1100 is suitable for measuring vibrations on machines and plants, for assessing the roller bearing state, control of the machine speed, detection of critical operating ranges and for early damage detection. With optional accessories, also for measuring temperature and belt tension.

Execution:
- Robust plastic housing
- High-contrast, backlit LCD display (122x32 pixels)
- 1x BNC measuring input for vibration sensors
- 1x mounting socket, 5-pin for frequency/temperature sensors
- incl. acceleration sensor HMA 1140 (100mV/g) with 1.5m cable length
- Device dimensions (w x h x d): 80x160x40mm

Advantage:
- Ideal for assessing the vibration condition of rotating machines according to ISO 10816 - 1 to 6.
- Easy-to-understand, reliable user guidance
- Collection of key measured variables in one measuring instrument
- Portable and quick to use
- Meter already calibrated at delivery

Delivery:
Measuring instrument, acceleration sensor HMA 1140, sensor tip, magnetic base, charger and transport case

Vibration and balancing machine EasyBalancer EB 3500

without and with roller bearing condition gSP MI/EB function

Application:

EasyBalancer EB 3500 is specially designed for balancing sanding discs and grinding spindles. The positions of the sliding weights for correcting the unbalance are determined automatically. Ideal for field balancing sanding discs or spindles, assessing balancing quality, measuring the overall vibration, measuring unbalancing vibrations, evaluating the machine and plant status, measuring the vibration of bearing and machine housings, measuring speed and measuring the rolling bearing condition.

Execution:

- high-resolution 3.5 inch touchscreen display
- USB interface for data transfer
- two sensor connections: 1x measuring input and 1x speed input
- **Ident. No. 105:** Roller bearing condition gSP MI/EB function is **optional and/or retrofit**
- **Ident. No. 107:** incl. roller bearing condition gSP MI/EB function, software-controlled

Advantage:

- Simple user guidance with high-resolution touchscreen
- Measurement data is transferred via USB interface to the PC
- Create tailored measurement protocols using the PC program
- For mobile use with measurement data memory function

- **Ident. No. 105:** Balance and measure optional vibration in one device
- **Ident. No. 107:** Balance and optionally measure vibration in a single device

Delivery:

Ident. No. 105: EasyBalancer EB 3500, power supply and charging adapter, vibration sensor HMA 1140, cable length 5 m, retaining magnet for vibration sensors, reflective tape 0.5 m, speed sensor A1S30P with magnetic stand and connecting cable 3 m, USB cable, USB stick with PC program and operating instructions, transport case

Ident. No. 107: EasyBalancer EB 3500, power supply and charging adapter, HMA 1140 vibration sensor, cable length 5 m, retaining magnet for vibration sensors, reflective tape 0.5 m, A1S30P speed sensor with magnetic stand and connecting cable 3 m, USB cable, USB flashdrive with PC program and operating instructions, transport case

Notes:

Ident. No. 107: Roller bearing condition gSP MI/EB function: This software extension can be used to assess whether the roller bearings are damaged. The measurement is performed using the vibration sensors that come with the device set. The overall vibration is the basis for assessing the condition of machines and plants in accordance with **DIN ISO 10816_3.**

Scale rings with dual scale

for vibration and balancing machine EasyBalancer EB 3500/MI 2500

Application:

The EasyBalancer displays the position in degrees, at which the balance weights are to be positioned. The scale rings with a degree scale 0-360° serve as a positioning aid.

Execution:

- Scale rings made of aluminium, blue anodized
- Engraving as a double scale 0-360°

hanhart Addition stopwatch

Application:
For timing with interruption options. Can be used universally as a single-stop or double-stop device. Press the right-hand button to start, press the crown to stop as often as required, press the left-hand button to reset

Execution:
- ABS plastic housing
- Shock resistant
- Pin-lever movement
- 1 jewel
- Wind at the rear
- Unbreakable mainspring
- With lanyard

Advantage:
- Universal use as a single-stop and addition stop watch

hanhart Large stopwatches

Application:
For timing when a large display is required.

Execution:
- **No. 39090:**
  - Quartz-controlled analogue stop watch
  - Dial diameter 110 mm
  - Functions: Start/stop, addition function, reset
  - Luminescent pointer
  - Can be used as a table-top or wall-mounted model
- **No. 39092:**
  - Electronic digital stop watch
  - Large 2-row LCD display with 8/22 mm digit size
- Stopwatch function with 4 timers
- Loud alarm signal
- Standard time display
- Programmable sequence
- Switchable time resolution in 1/10 s or 1/100 min.

Delivery:
No. 39090: Battery (1x 1.5 V, type AA)
No. 39092: With battery (1x 1.5 V, type AA)

Handheld stroboscope

Model with white light

Application:
Determining and monitoring rotation speed or oscillation frequency of rotating or vibrating systems without interrupting the production process. In places that are difficult to access, on particularly delicate systems, and for detecting undesirable oscillation resonances. Suitable for inspecting motors, turbines, pumps, ventilators, centrifuges, systems for paper and film manufacturing, vibrating tables, vibrating and oscillating screens. **Measurement principle:** The stroboscope works with an infinitely variable light frequency. For the purposes of the test, the stroboscope is pointed towards the object and the flash frequency is adjusted by actuating the corresponding keys. If the flash frequency of the stroboscope matches the flash frequency of the test object, this object will be displayed as a stationary image. The frequency indicated on the display corresponds to the rotation speed of the object.

Execution:
- Flash frequency adjustable in FPM and Hz
- Digital pulse width modulation
- Phase shift -360° to +360°
- Frequency +60 FPM to 9,999.99 FPM, resolution 0.01 FPM
- Frequency +10,000 FPM to 300,000 FPM, resolution 0.1 FPM
- Frequency +1 Hz to +5,000 Hz, resolution 0.01 Hz
- **Ident. No. 040:**
  - White-light LEDs
  - Brightness: 3 high-power LEDs, light colour 6,500 K
  - 6,160 lux at 30 cm/1,000 Hz
- **Ident. No. 042:**
  - 3 high-power UVA LEDs, flash colour 365 to 370 nm
  - Intensity: 202 µW/cm² at 30 cm
- **Ident. No. 042–044:** UV-light LEDs
- **Ident. No. 044:**
  - 3 high-power UVA LEDs, flash colour 380 to 390 nm
  - Intensity: 317 µW/cm² at 30 cm

Advantage:
- quick adjustment with x2 and ÷2 buttons
- Intuitive control buttons and user-friendly display
- Rechargeable lithium battery

Delivery:
with USB-C cable, quick start guide, in service bag

Technical data:
- Error limit (%): 0.001 %
- Width: 90 mm
- Height: 35 mm
- Depth: 165 mm
- IP protection class: IP 52

Handheld stroboscope

RT Strobe Pocket LED

Application:
determining and monitoring rotation speed or oscillation frequency of rotating or vibrating systems without interrupting the production process. in places that are difficult to access, on particularly delicate systems, and for detecting undesirable oscillation resonances. suitable for inspecting motors, turbines, pumps, ventilators, centrifuges, systems for paper and film manufacturing, vibrating tables, vibrating and oscillating screens. **measurement principle:** the stroboscope works with infinitely adjustable light frequency. for the purposes of the test, the stroboscope is pointed towards the object and the flash frequency is adjusted by actuating the corresponding keys. if the flash frequency of the stroboscope does not concur with the flash frequency of the test object, this object is indicated visually as a stationary image. the frequency indicated on the display corresponds to the rotation speed of the object.

Execution:
- Latest LED technology
- Continuously adjustable light frequency
- High illuminance across the entire frequency range
- High adjustment accuracy and stability
- Adjustable flash duration
- Frequency range 30...300,000 FPM

Delivery:
Stroboscope, batteries 3 x 1.5 V type AA, case

Technical data:

Electronic hand-held tachometer

Application:
For non-contact and contact (mechanical) rotational speed measurements, as well as contact (mechanical) speed and length measurements

Execution:
- Non-contact measurement using red, modulated light beam and reflective markers
- Mechanical measurement using adapter and attachable contact tips (male taper) or hollow measuring tip (female taper)
- For the speed measurement (peripheral speed or belt speed) as well as length measurement, a measuring wheel is placed on the adapter
- 5 digit LCD display
- Error limit: 0.02% of display value (± 1 digit increment)
- Update time: 1 s
- Measuring distance: optical max. 600 mm (non-contact measurement)
- Memory function: last value measured, maximum value, minimum value, mean
- Shutdown: automatically 30 s after last key press, measured value saved
- Housing: Plastic with holster

Delivery:
Case with basic device, adapter, measuring tip, hollow measuring tip, measuring wheels 0.1 m and 6 inch (cylindrical running surface), extension shaft, 10 reflective markers, 2 x 1.5 V AA batteries, calibration certificate, operating instructions

Technical data:
- Max. rotation speed of measuring range (contact): 19999 rpm
- Max. speed measurement of measuring range: 1999 m/min
- Max. measurement distance: 600 mm
- Error limit (%): 0.02 %

Phase tester, single-pole and non-contact voltage tester

with LCD display and glow lamp

Application:
Phase tester with LCD display, single-pole, for 12-230 V AC and 12-48 V DC, as well as non-contact voltage tester for direct voltage (e.g. automotive) and alternating voltage (electrical installations).

Execution:
- Direct or non-contact voltage testing
- Slotted screwdriver for cable terminals and contactor switches

Advantage:
- Direct or non-contact voltage testing
- Suitable for direct voltage (automotive) and alternating voltage (electrical installations)
- No battery required

Technical data:
- Display: LCD | Glow lamp
- Phase sequence test: Yes
- Length x width x height: 130 x 21 x 19 mm
- Overvoltage protection category: CAT II/300 V

Two-pole voltage testers (EN standard 61243-3)

Model testo 750-1/750-2/750-3

Application:
Ideally suited for testing electrical systems and devices for voltage or absence of voltage. Thanks to the LED all-round display and unique fibre-optic light guide technology, the voltage indication is clearly and distinctly visible from any position.

Execution:
- Clear, patented LED all-round display
- Large fibre-optic light guide for optimal voltage indication
- Robust housing with ergonomic handle and anti-slip ring
- **Ident. No. 205–210:**
  - Additionally suitable for single-pole voltage testing for rapid determination of live conductors
  - Additionally suitable as a continuity tester and for rotary field measurements
  - Includes RCCB tripping function for testing fault current circuit breakers
  - Includes vibrating load keys to avert the accidental execution of trigger tests
  - Built-in pocket torch for illuminating measuring points in darkness
- **Ident. No. 210:** LCD display for current measurement display

Delivery:
Voltage tester incl. 2x batteries AAA, test tip protection, measuring tip attachments, calibration log and operating instructions

Current voltage tester (EN standard 61243-3)

Model testo 755-1/755-2

Application:
Voltage tester with current measurement, suitable for testing electrical circuits, voltage or absence of voltage in systems, as well as for current flow or current consumption and continuity testing. The voltage tester automatically detects and selects all electrical parameters.

Execution:
- **Ident. No. 455:**
  - Incl. rotary field test 100 to 690V/ AC at 50/60 Hz
  - Including single-pole phase testing 100 to 690V/ AC at 50/60 Hz

Advantage:
- Suitable for almost all electrical measuring tasks such as DC voltage, AC voltage, **AC current** and ohm resistance
- Simple and safe operation thanks to automatic measured variable detection
- Particularly user-friendly thanks to replaceable test tips
- Built-in pocket torch for illuminating measuring points in darkness
- DIN-EN 61243-3:2014 and DIN EN 61010-1:2011 certified

Delivery:
Current-voltage tester incl. 2x batteries AAA, measuring tips, measuring tip attachments, calibration log and operating instructions.

BENNING Two-pole voltage testers (EN standard 61243-3)

With the VDE mark

Application:

Ident. No. 027–037: for use in all installation fields and renewable energy sectors. CAT IV 690 V, CAT III 1000 V. Tested and approved in line with DIN EN 61243-3(VDE 0682-401):2015.

Ident. No. 056: For checking that cables are de-energised, also suitable for very robust applications up to 600 V AC/DC.

Execution:

- **Ident. No. 027:** Continuity test (acoustic/optical) Cable breakage detector Diode test Voltage indication from 50 V even with empty batteries TRUE RMS high voltage display
- **Ident. No. 032:** Continuity test (acoustic/optical) Cable breakage detector Voltage indication from 50 V even with empty batteries High voltage display
- **Ident. No. 037:**
  - no batteries required
  - displays high voltages
- **Ident. No. 056:**
  - Complies with DIN EN 61243-3:2015 and IEC 61243-3:2014
- Can be used on electric circuits in overvoltage categories up to CAT III 600 V and CAT II 690 V
- tester handle locking mechanism for single-handed operation on sockets and for safe storage
- cable break detector (from an alternating voltage of approx. 200 V)
- external conductor tester (single-pole external conductor test possible in earthed systems)
- fully functional voltage display if batteries are flat or removed

Prod. Gr. 7AH

BENNING Phase, rotational field and magnetic field testers

TRITEST® easy, VT1 and VT2

Application:

For quick and easy phase testing on sockets, branches, switches and lamps

Execution:

- LED blink frequency and signal tone frequency proportional to voltage level
- Capacitive measurement process requires no current flow
- **Ident. No. 110:** Rotational field testing via green/red LED probe tip (right-hand/left-hand)
- **Ident. No. 120–130:**
- Contactless testing, no contact with electrical cables is required
- VT2: Magnetic field test using green LED probe tip (magnet activated)

Advantage:

- **Ident. No. 110:** Simple testing of rotational field direction (L1-L2-L3) in alternating current networks using illuminating green LED probe tip = right-hand field
- illuminating red LED probe tip = left-hand field

Delivery:

Includes Batteries, pen clip

Contactless voltage tester (EN standard 61326-1 | 61010-1 (VDE 0411-1))

Model testo 745

Application:
With the testo 745 non-contact voltage tester, you can quickly and easily determine the voltage or absence of voltage.

Advantage:
- Filters for high-frequency interference signals, thus more reliable voltage indication
- Visual and audible warning signal when AC voltage is detected
- Adjustable sensitivity in two levels: Stage 1 for phase determination, stage 2 for voltage indication
- Built-in pocket torch for illuminating measuring points in darkness
- Waterproof and dustproof according to degree of protection IP 67

Delivery:
Non-contact voltage tester testo 745 including 2x AAA batteries, calibration log and operating instructions.

Model		testo 745
Min./max. voltage range AC		12-1000 V/AC
Overvoltage protection category		CAT III/1000 V | CAT IV/600 V
75018...	Ident. No.	200 ●

Prod. Gr. 4CF

Laserliner Contactless voltage tester

ActiveFinder Pro model

Application:
Professional contactless voltage tester to locate electrical wiring and equipment

Execution:
- For cables, sockets, lamp sockets, fuses, switch cabinet and system parts
- To find live wires
- Finds line breaks in wires and cables
- Displays electrical voltages with two-colour LED signalling and acoustic warning
- Colour differentiates between voltages <100 V (green) and voltages >100 V (red)
- Built-in, bright torch

Delivery:
including batteries (2x AAA), in transport bag

Model		ActiveFinder Pro
Display		Audible | LED
Min./max. voltage range AC		100-1000 V
Overvoltage protection category		CAT IV/1000 V
75019...	Ident. No.	000 ●

Prod. Gr. 3EE

PANCONTROL.at PAN 400FI voltage tester

With LED indicator

Technical data:
- Length x width x height: 241 x 65 x 27 mm
- Overvoltage protection category: CAT III/400 V

75017...	Ident. No.	305 ●

Prod. Gr. 4CG

MV-1000AD voltage/continuity tester

With LED and illuminated digital LCD display

Technical data:
- Display: LED
- Min./max. electrical-resistance measuring range: 1 Ohm-1999 Ohm
- Rotating field test: Yes
- Phase sequence test: Yes
- Length x width x height: 260 x 74 x 34 mm
- IP protection class: IP 64
- Overvoltage protection category: CAT III/1000 V | CAT IV/600 V

75017...	Ident. No.	315 ●

Prod. Gr. 4CG

Electrostatic meter

PCE-SFS 10

Application:
For detecting and measuring electrostatic charges and voltage fields. Non-contact measurement prevents accidental discharges.

Execution:
- Broad measuring range up to ±60 kV DC
- HOLD button for keeping the measured value on the display
- Simultaneous measurement of air temperature and relative humidity
- Two laser points for correcting the measurement distance
- ECO mode for switching off the display illumination
- Battery life of up to 20 hours

Delivery:
with earthing cable, 9 V block battery, operating instructions, in service bag

Technical data:
- Type description: PCE-SFS 10

48406...	Ident. No.	020 ○

Prod. Gr. 4AD

DUTEST pro continuity tester (EN standard 61010)

For high and low resistance measurement

Application:
For detecting wiring faults and cable disruptions.

Execution:
- Acoustic test buzzer
- 3-stage LED display
- Cable break detector

Advantage:
- Buzzer volume (adjustable)
- Powerful high-performance LED pocket torch (adjustable)

Display		LED | Audible
Protected for external voltage up to (V/AC)		400
Min./max. continuity test		0-100 Ohm
Phase sequence test		Yes
Polarity testing		Yes
Overvoltage protection category		CAT III/300 V
75021...	Ident. No.	011 ●

Prod. Gr. 7AH

BENNING TRITEST pro rotation field direction indicator (EN standard 61557-7)

With high-performance LED pocket torch and magnetic hanger

Application:
For testing the rotation field direction in three-phase networks.

Execution:
- Displays “clockwise” or “anticlockwise rotation field” via green/red LED
- Displays phase voltages L1, L2 and L3 via red LED
- Powerful high-performance LED pocket torch
- Integrated magnet holder and belt clip on back of housing

Delivery:
Incl. three attachable 4 mm test tips and an alligator clip

Model		TRITEST Pro
Display		LED
Min./max. voltage range AC		400-500 V/AC
Overvoltage protection category		CAT III/300 V
75021...	Ident. No.	101 ●

Prod. Gr. 7AH

Laserliner CableTracer Pro line detector

with transmitter and receiver

Application:
For locating electrical cables, fuses, circuit breakers, metal pipes, interrupted cables and short circuits in existing installations

Execution:
- Non-contact tracing of the transmission signal by the receiver
- Can be used with or without mains voltage
- High frequency of 125 kHz
- DC and AC voltage display
- Signal coding allows the use of up to seven transmitters and one receiver
- Integrated AC voltage detector
- Permanent AC voltage warning
- integrated illumination of measuring points
- Clearly arranged, illuminated LC displays

Advantage:
- CableTracer RECV receiver with measuring range up to two metres

Delivery:
CableTracer TX transmitter, RECV receiver, connecting lines, measuring tips, measuring clamps, batteries (2x 9 V block), in case

Model		CableTracer Pro
Display		Digital
Overvoltage protection category		CAT II/300 V | CAT III/300 V
75019...	Ident. No.	011 ●

Prod. Gr. 3EE

PCE INSTRUMENTS Electrostatic measuring device

PCE-SFS 10

Application:
For detecting and measuring electrostatic charges and voltage fields. Non-contact measurement prevents accidental discharges.

Execution:
- Broad measuring range up to ±60 kV DC
- HOLD button for keeping the measured value on the display
- Simultaneous measurement of air temperature and relative humidity
- Two laser points for correcting the measurement distance
- ECO mode for switching off the display illumination
- Battery life of up to 20 hours

Delivery:
with earthing cable, 9 V block battery, operating instructions, in service bag

Technical data:
- Type description: PCE-SFS 10

48406...	Ident. No.	020 ○

Prod. Gr. 4AD

Magnetic field measuring device/magnetometer

Application:
For detecting and measuring static and fluctuating magnetic fields. For example, for testing solenoid valves, relays or transformers. Magnetic fields in already assembled systems can be measured through the housing.

Execution:
- Adjustable alarm function
- Data storage with PC connection
- Temperature measurement
- Switch between AC and DC measurement
- Sensor can be aligned using vial

Advantage:
- Very flat blade tip allows measurements to be carried out through small openings.
- Analysis of the measured data, live view and device operation are possible using the PC software.

Delivery:
with sensor, mini USB cable, software CD, 6x 1.5 V AAA batteries, power supply, operating instructions, in device case

Technical data:
- Type description: PCE-MFM 3500

48406...	Ident. No.	004 ○

Prod. Gr. 4AD

MMP3 pocket multimeter (EN standard 61010)

Small digital multimeter in leather case for universal use

Application:
For use in installation fields and simple, industrial fields.

Execution:
- Continuity/diode testing
- resistance/frequency measurement
- measured value storage (HOLD)

Delivery:
Includes leather case, batteries, permanently connected measuring leads

Model		MM P3
Display range		5000 digits
Measuring accuracy		+/- 0.6 %
Min./max. test voltage (DC)		100 µV/DC-600 V/DC
Min./max. test voltage (AC)		100 µV/AC-600 V/AC
Continuity testing		Yes
Diode testing		Yes
Min./max. electrical-resistance measuring range		0.1 Ohm-40 MOhm
Min./max. frequency		0.000000001 / 5 MHz
Volt sensor		No
Memory function		HOLD
Measuring procedure		RMS
Overvoltage protection category		CAT III/300 V

Prod. Gr. 7AH

Digital multimeter (EN standard 61010)

with voltage sensor function

Application:
Ideal for many measuring tasks in electrical trade, industry, service and HVAC engineering.

Execution:
- **Ident. No. 112:** Backlit digital display with 6,000 count resolution
- **Ident. No. 122–132:** TRUE RMS

Advantage:
- TRUE RMS measurement method for measuring non-linear signals
- Robust protective rubber frame for increased grip and impact resistance

Notes:
Ident. No. 122: extra features compared to BENNING MM 2-1: TRUE RMS current measurement (10 A AC/DC) protected via 1 kV HBC fuse and capacity measurement (10 mF)
Ident. No. 132: extra features compared to BENNING MM 2-2: Temperature measurement (-40 °C to +400 °C) incl. temperature sensor

BENNING Digital multimeter (EN standard 61010)

with voltage sensor function

Application:
Ideal for many measuring tasks in electrical trade, industry, service and HVAC engineering.

Execution:
- TRUE RMS

Advantage:
- TRUE RMS, AC and AC+DC measurement method for measuring non-linear signals
- AutoV function for automatic AC/DC switching and measuring range selection
- LoZ function with low input impedance (more than 2 kΩ) for suppressing "reactive voltages"
- Quick continuity testing with visual and acoustic display (less than 100 µs)
- Socket control with warning (optical/acoustic) to protect against incorrect operation

Delivery:
Digital multimeter with integrated protective rubber frame, protective pouch, high-quality silicone test leads with gold-plated 2 mm and screw-on 4 mm measuring tip, temperature probe and battery set

Model		MM 7-2
Display range		6000 digits

BENNING EV 3-2 test adapter/measuring adapter for e-charging stations

for BENNING MM 7-2 digital multimeter

Application:
Measuring adapter with Type 2 plug for simulating charging states and testing the effectiveness of protective measures on 1- and 3-phase e-charging stations. This measuring adapter has been specially designed for testing e-charging stations in combination
with a suitable installation tester such as the BENNING MM 7-2 (75024141).

Execution:
- Test socket and 4 mm sockets for easy connection to an installation tester
- Separate phase indication by three LEDs for easy voltage testing
- Proximity Pilot (PP) checks the charging cable coding for charging current limit
- Control Pilot (CP) simulates vehicle status A, B, C, D and E (short circuit between CP-PE)
- BNC connection for the CP signal output for testing with an oscilloscope
- Check the EVSE locking system from status B (charging cable enabling is blocked)
- Input voltage 1-phase: up to 250 V, 50 Hz-60 Hz/3-phase: up to 430 V, 50 Hz-60 Hz
- Maximum test current: 40 A (10 ms) periodic operation

Delivery:
Measuring adapter, protective pouch, operating instructions

BENNING TRUE RMS multimeter MM 10-PV

Digital multimeter for photovoltaic systems and applications with high system voltages

Application:
Digital multimeter for photovoltaic systems and applications with high system voltages

Execution:
- Data logger, memory function and Bluetooth(R) 4.0 low-energy interface
- Benning MM-CM app link for downloading, saving and sharing measurements using a smartphone/tablet
- Low-pass filter (HFR high frequency suppression) for measurements of clocked motor drives
- Voltage sensor for non-contact phase and cable break testing (red LED)
- Measured value (HOLD) and minimum/maximum value memory (MIN/MAX)
- Measurement category CAT IV 600 V, CAT III 1000 V

Advantage:
- Precise due to TRUE RMS measurement method

Delivery:
Includes protective rubber frame, measuring adapter BENNING TA PV, measuring leads, crocodile clips, pouch, wire temperature sensor and batteries

Notes:
Operating instructions can be downloaded from the HAHN+KOLB online shop

Model			MM 10-PV
Display range			6000 digits
Min./max. test voltage (DC)			0.1 mV-1000 V

BENNING Digital multimeter (EN standard 61010)

With the TRUE RMS effective value measurement method

Application:
Ident. No. 215: for use in industry, service and trade
Ident. No. 231: For use in installation fields/industry.
Ident. No. 245: For demanding measuring tasks in industry and craftsmanship

Execution:
- **Ident. No. 215:**
  - functions: HOLD, MIN/MAX, PEAK, REL
  - microampere measuring ranges (400.0 µA DC/4000 µA DC) for ionisation current measurement on heating systems
  - volt sensor
- **Ident. No. 215, 245:**
  - LCD backlighting
  - continuity/diode testing
- **Ident. No. 231:** Automatic voltage detection (AutoV)
- **Ident. No. 231–245:**
  - bar graph display
  - LoZ voltage measurement with low input impedance
- **Ident. No. 245:**
  - Datalogger function LOG (40,000 measuring points)
  - automatic voltage detection (AutoV)
  - Low-pass filter (HFR) for measurements of clocked motor drives
  - PC software: transfer measured values in real time (USB), sampling rate is adjustable, measured value storage (MS EXCEL)
  - download the free app! Monitor up to five multimeters. Transfer measured values in real time (Bluetooth(R) 4.0). Measured value storage (CSV).
  - interfaces: Bluetooth® Low Energy 4.0, USB

Delivery:
Ident. No. 215: Protective rubber frame, batteries, measuring leads, wire temperature sensor, bag
Ident. No. 231: protective rubber frame, measuring leads, wire temperature sensor with adapter, bag
Ident. No. 245: incl. PC software, serial data cable with USB connection, protective rubber frame, magnetic hanger, case, batteries, test leads, wire temperature sensor and calibration certificate

Digital multimeter (EN standard 61326-1)

Model testo 760-1/760-2/760-3

Application:

For simple and safe measurement of important electrical parameters. Measured variables are automatically detected on the basis of the socket assignment. This eliminates dangerous misconfiguration.

Execution:

- Large, illuminated LCD display
- **Ident. No. 525–530:**
  - Includes TrueRMS effective value measurement and current measurement in the µA range
  - Includes low-pass filter
  - Incl. connection option for TE type K thermocouple probes
- **Ident. No. 530:** Extended measuring ranges for voltage, frequency and capacitance

Advantage:

- Simple and safe operation thanks to automatic measured variable detection
- Convenient one-handed operation by means of function keys
- **Ident. No. 525–530:**
  - Precise measurement results for frequency converter-controlled motors thanks to integrated low-pass filter
  - Connection option for a thermocouple sensor TE type K for additional temperature measurements
- **Ident. No. 530:** Extended voltage range up to 1000V and higher frequency and capacitance measuring ranges for industrial applications such as troubleshooting in large electrical installations

Delivery:

Multimeter including 2x AAA batteries, 1 set of measuring leads (75024478) and operating instructions.

Notes:

Ident. No. 525–530: A thermocouple adapter TE TYPE K (75024540) and a suitable temperature sensor are required for temperature measurement.

BENNING CM 2-1 TRUE RMS digital current clamp meter

Precise current measurement up to 400 A AC/DC

Application:
For measurement in electrical installations/ industry/PV.

Execution:
- Precise current measurement up to 400 A AC/DC
- Measure high currents safely and without contact
- Measurement of small currents (vehicle, photovoltaic, industrial)
- Frequency and capacitance measurement
- Audible and visual continuity test
- Low-pass filter (HFR high frequency suppression, 800 Hz) for measurements of clocked motor drives
- Low input impedance (LoZ) AutoV function for suppressing “reactive voltages”
- Voltage sensor for non-contact phase and cable break testing (LCD/buzzer)

Advantage:
- Several measurement functions in one device
- Robust and ergonomic ABS housing
- Memory functions

Delivery:
Protective case, measuring leads and batteries included in scope of delivery

Model			CM 2-1
Display range			4000 digits
Min./max. test voltage (DC)			100 µV-600 V
Min./max. test voltage (AC)			100 µV-600 V
Min./max. alternating current of measuring range			10 mA-400 A
Min./max. direct current of measuring range			10 mA-400 A
Continuity testing			Yes
Diode testing			Yes
Min./max. electrical-resistance measuring range			0.1 Ohm-40 MOhm
Min./max. frequency			0.00001 / 50 kHz
Max. collet opening (mm)			27
Memory function			SAVE
Measuring procedure			TRUE RMS
Overvoltage protection category			CAT III/300 V | CAT III/600 V
Length x width x height			188 x 56 x 28 mm

BENNING

Digital current clamp multimeters

With TRUE RMS current measurement

Application:

Ident. No. 341: For all demanding measuring tasks in industry and trade

Ident. No. 401: Micro-amp measuring range for testing

flame sensors and sacrificial anodes

on heating systems/reservoirs

Ident. No. 411: Measurements in industrial, electro-technical and photovoltaic sectors

Execution:

- **Ident. No. 341:**
  - with logging function and Bluetooth(R) interface
  - Low-pass filter (HFR) for measurements of clocked motor drives
  - Harmonics measurement (THD) to assess network quality
  - Continuity (30 Ω - 100 Ω), diode (0.8 V) and two-pole rotary field test
  - Auto sense function for automatic measurement range and function selection
  - Integrated voltage sensor signals non-contact phase voltages and cable breaks in cables (red LED)
  - Precise due to TRUE RMS AC, AC+DC measurement method
  - Recording of load profiles on single and three-phase consumers in AC/DC networks
  - Datalogger function LOG (10,000 measuring points, scanning frequency: 1 s-10 min)
- **Ident. No. 401:**
  - Data logger, memory function, Bluetooth(R)
  - App for downloading, saving and sharing measured values via smartphone/tablet
  - INRUSH for measuring switch-on currents (motors etc.)
  - Low-pass filter for measurements of clocked motor drives
  - Frequency/capacitance measurement
  - functions: AutoV, LoZ, Voltsensor, ZERO
- **Ident. No. 411:**
  - Automatic function and measuring range selection
  - Measurement errors due to selecting the incorrect measuring range are ruled out
  - functions: LoZ, ZERO

Delivery:

Ident. No. 341: Includes bag, batteries and measuring leads

Ident. No. 401–411: Includes Accessories: bag, batteries, measuring leads

Notes:

Ident. No. 341: Monitor, store and share your measurements for further evaluation via the free “BENNING MM-CM Link” app within your organisation.

BENNING CM 11 TRUE RMS AC/DC milliampere current clamp multimeter

Precise measurement of low AC/DC currents with a maximum resolution of 100 µA

Application:
Ideal for troubleshooting problems in electrical installations, control systems, devices and motor vehicle electrical systems.

Execution:
- Measures stray, differential, leakage and load currents
- Measures 4 mA - 20 mA process signals without interrupting the current loop
- Standby current measurement for batteries to monitor battery discharge via leakage
- ZERO function

Delivery:
includes accessories: bag, batteries, measuring leads

Model			CM 11
Display range			6000 digits

BENNING CM 1-4 open TRUE RMS current clamp meter

Voltage measurement up to 1,000 V AC/DC

Application:
For measurements in electrical installations, maintenance and service, but also in photovoltaic/wind turbines and hybrid vehicle technology.

Execution:
- LED step display: 12, 50, 120, 230, 400, 690, 1000 V
- Rotary field direction test via green LEDs (right/left)
- Single pole external conductor test (phase) via red LED
- Continuity test via buzzer and red LED
- TRUE RMS

Advantage:
- One-hand operation for voltage measurement at sockets (19 mm)

Delivery:
Includes belt holster, test lead set, tip protector, contact tip enlargement, batteries

Model			CM 1-4
Display range			9999 digits
Measuring accuracy			+/- 0.7 %
Min./max. test voltage (DC)			6 V/DC-1000 V/DC

Current clamp (EN standard 61326-1)

Model testo 770-1/770-2/770-3

Application:
Ideally suited as a measuring instrument for electrical installations and service operations. With its innovative gripping mechanism, the testo 770 is the perfect current clamp for contactless measurements on tight-fitting cables with small diameter. AC/DC and other electrical parameters such as resistance, continuity, diode and capacitance are automatically detected. This makes operation particularly easy.

Execution:
- Large, illuminated two-line LCD display
- **Ident. No. 465–470:**
  - Incl. temperature adapter for thermocouple probe TE type K
  - Including current measurement in the µA range
- **Ident. No. 470:**
  - including Bluetooth(R) and testo Smart App (free)
  - Improved effective value measurement TruRMS

Advantage:
- Fully retractable clamp arm for gripping tightly packed cables
- Auto AC/DC for current, voltage and other parameters
- **Ident. No. 460:** Measuring function for starting current on electric motors
- **Ident. No. 465:** Measuring function for starting current on electric motors and ionisation current testing in the µA range
- **Ident. No. 465–470:** Temperature adapter for type K thermocouple

- **Ident. No. 470:**
  - Measuring function for starting current on electric motors, power measurement and ionisation current testing in the µA range
  - Bluetooth(R) connection to your smartphone (with testo Smart App)

Delivery:
Ident. No. 460, 470: Including battery, 1 set of test leads (75024478), operating instructions.
Ident. No. 465: Incl. batteries, 1 set of test leads (75024478), 1 x adapter for thermocouple type K, operating instructions.

Notes:
Ident. No. 465–470: TE type K temperature sensor available as an option

BENNING IT101 insulation and resistance measuring instrument

TRUE RMS voltage measurement with low-pass filter

Application:
For insulation resistance and low impedance measurement in electrical installations.

Execution:
- R ISO test voltages 50 V to 1000 V
- R PE test current 200 mA
- Polarisation index (PI), dielectric absorption ratio (DAR)
- Switchable probe for triggering measuring procedures

Advantage:
- Selectable limit values for ISO measurement, clear display (green LED for passed, red LED for test voltage/external voltage)
- Internal memory

Delivery:
Includes bag, switchable probe, measuring leads, crocodile clips, protective rubber frame, batteries

BENNING IT 101

Display range		4000 digits
Min./max. low impedance resistance		0.01 Ohm-40 kOhm
Min./max. insulation resistance		50 kOhm-20 GOhm

Laserliner Locating and drilling aligning device CenterScanner Compact

Determination of the entry and exit points of drill holes

Application:
Professional drill aligning device to securely determine entry and exit points on wall and ceiling boreholes

Execution:
- System consists of transmitter and receiver, making it easy to align the drill channel
- Wall thicknesses up to 120 cm
- Precise location of the entry and exit positions using clearly visible LED indicators and acoustic signals
- Easily accessible markers in transmitter and receiver for central orientation
- Determines the required borehole depth with the built-in LCD display up to 150 cm
- Optical and acoustic warning where foreign objects are detected

Delivery:
including batteries (6x AAA), glue kit, 4x slide pads, in case

Model		CenterScanner Compact
75019...	Ident. No.	030 ●

Prod. Gr. 3EE

Laserliner Electronic locating device MultiScanner Plus

Detection of wiring, metal and beams

Application:
Electronic position finder for the detection of wiring, metal objects as well as wall and crossbeams in walls and ceilings

Execution:
- For walls, ceilings and cladding made from stone, concrete, screed, wood, ceramic and mineral materials
- Detection and differentiation of magnetic and non-magnetic metal
- Precise depth display in metal mode for checking the borehole depth
- Precise location of live and non-live electric wiring
- Determining the position of wall and crossbeams in dry walling including the display of the beam centre and edges
- Automatic and manual calibration function for the optimum adaptation to the base material

Advantage:
- Suitable for all non-metallic formwork
- Easy and secure use with operator guidance
- Measurement depths: magnetic metal 120 mm, non-magnetic metal 100 mm, wiring 50 mm, beams 20 mm

Delivery:
including Li-Ion battery pack, USB-C cable, in case

Model		MultiScanner Plus
Max. detection depth of ferrous metals (mm)		120

Elmasonic Easy ultrasonic cleaning device

without heating system

Application:

The entry-level ultrasonic cleaning devices of the Easy model line without heating system are designed as single-frequency devices for gentle cleaning of parts. Ideally suited for removing dust, lint, fingerprints and other dirt that does not require additional heating power.

Execution:

- Stainless steel, deep-drawn cleaning tub
- 2 ultrasonic modes (eco and dynamic), for demand-oriented sound field distribution in the ultrasonic bath
- front side features mounted control elements with simple LED display
- Rotary switch on/off, pre-select cleaning time: Short clean (1 to 30 minutes)

Advantage:

- 2-year warranty from initial commissioning, but no more than 3 years from the date of production
- dynamic mode, automatically set, for more intensive cleaning with higher cleaning performance
- eco mode, switchable, for gentle cleaning in quieter operation

Delivery:

Ultrasonic cleaning device incl. standard plastic lid

Elmasonic Easy ultrasonic cleaning device

with heating system

Application:
The entry-level ultrasonic cleaning devices of the Easy model series with heating system are designed as single-frequency devices for gentle cleaning of parts. Ideal for removing greases, oils, resin deposits, adhesive residue, swarf, flux, paint residue, soot, scale, dust etc.

Execution:
- Stainless steel, deep-drawn cleaning tub
- 2 ultrasonic modes (eco and dynamic), for demand-oriented sound field distribution in the ultrasonic bath
- Temperature control in increments of 5 °C adjustable from 30-80 °C for devices with heating system (temperature tolerance -5/+8 °C)
- Electronic selector switches on a wipeable membrane keypad and LED display showing all operating states
- Cleaning time preselection: Cleaning time can be set between 1 minute and 30 minutes or continuous operation (ultrasonic continuous operation max. 6 hours)
- from model 60H with drain on the back of the device
- Automatic safety cut-off with wake-up function

Advantage:
- 2-year warranty from initial commissioning, but no more than 3 years from the date of production
- dynamic mode, automatically set, for more intensive cleaning with higher cleaning performance
- eco mode, switchable, for gentle cleaning and low-noise operation

Delivery:
Ultrasonic cleaning device incl. standard plastic lid

Prod. Gr. 433

Elmasonic Select ultrasonic cleaning devices

incl. plastic pushdown lid

Application:
The ultrasonic cleaning devices in the Elmasonic Select model series with heating system are designed as single-frequency devices. They are used primarily in the metalworking industry for gentle but intensive cleaning of parts made from a wide variety of materials, such as steel, light metal, non-ferrous base metal, plastic and glass. The temperature-controlled heating system helps dissolve dirt thereby improving cleaning times and cleaning results. Ideal for removing grease, oils, chips, flux, paint and adhesive residues, oxide layers such as rust or verdigris, soot, scale, carbonisation and soldering residues, dust etc.

Execution:
- Includes plastic pushdown lid
- Splashproof housing with front-mounted digital control unit
- Cleaning tub, deep-drawn made from special, highly cavitation-proof stainless steel
- Auto-start function for starting cleaning when a preselected temperature is reached
- Electronic temperature control adjustable from 25 to 80°C in increments of 5°C
- Setup menu for customising the device functions
- Cleaning time preselection: Adjustable cleaning time between 1 minute and 6 hours
- Dry-running safety device
- Side drain and stopcock on the back of the device (Elmasonic Select 60-300)

Advantage:
- Memory for four customisable cleaning programs
- Convenient functions such as adjustable temperature limit, auto-degas and auto-start mode
- Five ultrasonic cleaning modes: degas, eco, sweep, pulse and dynamic for perfect cleaning results
- Very easy to use thanks to the clear, easy-to-read display and easily understandable function keys
- Audible and visual feedback on the operating status

Prod. Gr. 486

Elmasonic Select ultrasonic cleaning devices

incl. pushdown lid and sound-absorbing cover made of stainless steel

Application:

The ultrasonic cleaning devices in the Elmasonic Select model series with heating system are designed as single-frequency devices. They are used primarily in the metalworking industry for gentle but intensive cleaning of parts made from a wide variety of materials, such as steel, light metal, non-ferrous base metal, plastic and glass. The temperature-controlled heating system helps dissolve dirt thereby improving cleaning times and cleaning results. Ideal for removing grease, oils, chips, flux, paint and adhesive residues, oxide layers such as rust or verdigris, soot, scale, carbonisation and soldering residues, dust etc.

Execution:

- Splashproof housing with front-mounted digital control unit
- Cleaning tub, deep-drawn made from special, highly cavitation-proof stainless steel
- Auto-start function for starting cleaning when a preselected temperature is reached
- Electronic temperature control adjustable from 25 to 80°C in increments of 5°C
- Setup menu for customising the device functions
- Cleaning time preselection: Adjustable cleaning time between 1 minute and 6 hours
- Side drain with stopcock
- **Ident. No. 100, 120:** Incl. stainless steel push-down lid
- **Ident. No. 110, 130:** Incl. hinged lid made of stainless steel for noise protection

Advantage:

- Memory for four customisable cleaning programs
- Convenient functions such as adjustable temperature limit, auto-degas and auto-start mode
- Five ultrasonic cleaning modes: degas, eco, sweep, pulse and dynamic for perfect cleaning results
- Very easy to use thanks to the clear, easy-to-read display and easily understandable function keys
- Audible and visual feedback on the operating status

Elmasonic Xtra ultrasonic cleaning device

Single-frequency tabletop devices with heating system for professional cleaning

Application:
The ultrasonic cleaning devices in the Xtra model series are used primarily in the metalworking industry for gentle yet intensive cleaning of parts made from steel, light metal, non-ferrous base metal, plastic and glass. The temperature-controlled heating system helps dissolve stubborn dirt, thereby improving cleaning times and cleaning results. Ideal for removing greases, oils, swarf, flux, paint residue, soot, scale, dust etc.

Execution:
- Single-frequency devices of 37 kHz with a control range of -2.5/+5.5 kHz
- Tabletop device with controls on the front
- Welded ultrasonic bath made from special, highly cavitation-proof stainless steel
- Cleaning time and temperature pre-selection can be set via separate rotary dials
- Temperature regulation from 30 °C to 80 °C in 5 °C increments
- Automatic switch-off when the bath temperature exceeds 90 °C
- Dry-run detection
- Drain ball valve for draining contaminated cleaning fluids
- Base-mounted transducers

Advantage:
- Sweep function ensures homogeneous sound distribution in the cleaning bath and improves cleaning performance
- additional eco function for quiet, energy-saving operation. Increases the service life of the tub.
- additional dynamic function enhances the ultrasonic cleaning performance
- Audible and visual signal when cleaning is complete
- Two-year warranty from initial commissioning, but no more than three years from the date of production

Delivery:
Ultrasonic cleaning device, stainless steel lid, 2 m power cable and operating instructions

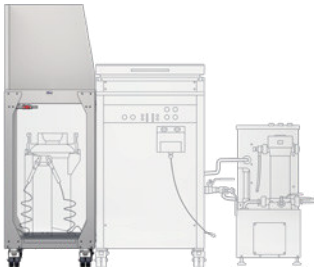
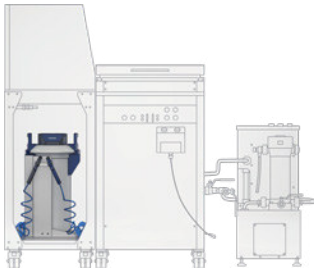
Prod. Gr. 433

Peripheral unit for ATORN ultrasonic cleaning devices

These peripheral accessories for ATORN Professional CLEAN MF ultrasonic cleaning devices take the entire cleaning process to a new level. The unit not only enhances productivity in the cleaning process, but is easy to set up, protects the environment and greatly reduces operating costs with consistent use.

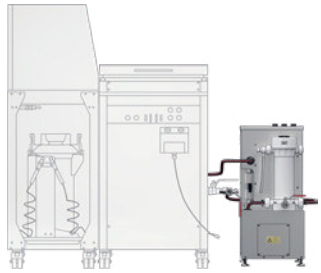


ELMA Table:
After pre-cleaning, the cleaned object can be moved directly from the Elma Table into the ultrasonic bath located at the same working height. Immediately after cleaning in the ATORN ultrasonic cleaning device, the cleaned object can be ergonomically lifted onto the Elma Table for cooling, rinsing or drying.



ELMA Rinse:
The Elma Rinse can be easily integrated into the Elma Table. Alternatively, it can be attached to the wall or table. The two handheld shower heads are each operated with mains water or demineralised water (DM).

ELMA Move:
The cleaning basket moves vertically through the ultrasonic bath at a rate of nine strokes per minute. Areas of irregular ultrasonic exposure alternately occur within the ultrasonic bath for physical reasons. If the object to be cleaned is moved cyclically through these localised areas with Elma Move, a maximum homogeneous cleaning effect is achieved.



ELMA Filter:
The contaminated cleaning bath (including fine particulates) is drawn in and cleaned via the filter. This continuous filtration increases the service life of the cleaning bath. Less frequent replacement of the claning bath is required, allowing considerable savings to be made in regards to water consumption and the purchase of cleaning chemicals.

ATORN ProfessionalCLEAN MF ultrasonic cleaning devices

Multi-frequency stand-alone units with heating system for professional cleaning work

Application:

For cleaning stubborn dirt such as grease, oil, lapping and polishing compounds, swarf, flux, paint residue, soot, scale dust, etc. and for parts with delicate surfaces. The ultrasonic cleaning devices in the Pro MF model series are designed as multi-frequency devices. They are used primarily in the metalworking industry for gentle but intensive cleaning of parts made from steel, light metal, non-ferrous base metal, plastic and glass. These devices are also suitable for cleaning spindle-side tool fixtures and for preliminary cleaning of parts for subsequent surface treatment. **The switchable dynamic, pulse and sweep function improves cleaning performance for removing particularly stubborn dirt. The result is maximum cleanliness even in hard-to-reach spots. 25 kHz ultrasonic frequency for coarse and preliminary cleaning, 45 kHz for fine cleaning.**

Execution:

- multi-frequency devices with 25 and 45 kHz operation for coarse, preliminary and fine cleaning
- heating system with temperature regulation from 30°C to 80°C, short heat-up times
- automatic safety shutdown after 12 hours of operation or at a bath temperature of 90°C
- free-standing device on rollers with controls on front
- ultrasonic bath made from special, highly cavitation-proof stainless steel
- inclined bath floor for improved drainage
- suspension device for cleaning and draining positions
- dynamic mode: automatic alternation between sweep and pulse function
- Base-mounted transducers

Advantage:

- sweep function for homogeneous sound distribution in the cleaning bath
- switchable dynamic and pulse function to improve ultrasonic cleaning performance
- all devices are equipped with multi-frequency operation (25/45 kHz), base-mounted transducers and heating
- temperature-controlled ultrasound activation at pre-heated temperature
- 3-year warranty if used correctly in single-shift operation

Delivery:

Ultrasonic cleaning device without insert basket, without lid

Notes:

Perform cleaning in process steps with optional peripheral units for ATORN ultrasonic cleaning devices, such as washbasins, rinsing units, oscillators and filter units.

ATORN ProfessionalCLEAN S 1900 ultrasonic cleaning device

Multi-frequency stand-alone unit with heating system and side-mounted transducers

Application:
Side-mounted transducers – ideal for cleaning filters, long components and components with complex surfaces. Removes stubborn dirt such as grease, oil, lapping and polishing compounds, swarf, flux, paint residue, soot, scale, dust etc. **The switchable dynamic, pulse and sweep function improves cleaning performance for removing particularly stubborn dirt. The result is maximum cleanliness even in hard-to-reach spots. 25 kHz ultrasonic frequency for coarse and preliminary cleaning, 45 kHz for fine cleaning.**

Execution:
- Multi-frequency device with 25 and 45 kHz operation for coarse, preliminary and fine cleaning
- **side-mounted transducers on two opposite sides**
- heating system with temperature regulation from 30°C to 80°C, short heat-up times
- automatic safety shutdown after 12 hours of operation or at a bath temperature of 90°C
- free-standing device on rollers with controls on front
- ultrasonic bath made from special, highly cavitation-proof stainless steel
- Inclined bath floor for improved drainage

Advantage:
- switchable dynamic and pulse function to improve ultrasonic cleaning performance
- sweep function for homogeneous sound distribution in the cleaning bath
- temperature-controlled ultrasound activation at pre-heated temperature
- 3-year warranty if used correctly in single-shift operation

Delivery:
Ultrasonic cleaning device without insert basket, without lid

Notes:
No noise protection cover is provided for this model!

Elma Sink rinsing unit

as peripherals for ultrasonic cleaning

Application:
For immersion rinsing or rinsing off objects, before or after ultrasonic cleaning.

Execution:
- Stainless steel tub

Advantage:
- Tub sizes are standardised to Elmasonic Easy, Select and P

Delivery:
Elma Sink rinsing unit, installation and operating instructions, L and XL versions additionally with hose nozzle and hose clamp

Notes:
Optional accessories: Modular high-grade steel basket inserts, see 43693605-650 and plastic lid 43693400-425

Elma Dry hot and cold air dryer

for drying after ultrasonic cleaning

Application:
For fast, gentle drying of parts after cleaning or rinsing.

Execution:
- Stainless steel housing, protected against dripping water
- Drying temperature max 70 °C
- automatic safety shut-off if temperature is too high

Advantage:
- generates effective flow turbulence inside the dryer, which dissipates the moist air to the outside
- easy to use with three toggle switch positions: off, warm air and cold air
- removable dust filter on the bottom prevents dust and indoor air from contaminating the items to be dried

Intermediate shelves set for modular basket system

suitable for modular Elmasonic Easy and Select basket inserts

Application:
For horizontal partitioning of modular baskets.

Execution:
- Silicone brackets
- **Ident. No. 700–705:** Stainless steel level plate
- **Ident. No. 710–715:** Stainless steel shelf

Advantage:
- additional insert shelf for modular basket system; provides additional cleaning surface distributed over two levels
- autoclavable, for post-processes after cleaning
- Bayonet openings for mounting brackets such as Elma pins, silicone holder bottom comb etc.

Delivery:
Ident. No. 700–705: 1x level plate, 5x silicone holders
Ident. No. 710–715: 1x shelf, 10x silicone holders

Notes:
Maximum of one horizontal partition allowed per modular basket

Technical data:
- Punched-hole width x punched-hole length: 11 x 15 mm

Application:
For holding different parts in the modular basket system.

Execution:
- 3x ELMA pins (0741) 43693795
- 3x ELMA pins (0772) 43693796
- 2x ELMA pins (0509) 43693791
- 2x ELMA pins (0158) 43693792
- 2x ELMA pins (0767) 43693793
- 2x ELMA pins (0613 and 0614) 43693794
- 2x ELMA pins (0021R) 43693797
- 2x ELMA pins (0001R) 43693798
- 2x ELMA silicone holder lateral combs 43693850
- 2x ELMA silicone holder bottom combs

Advantage:
- simple equipping of parts in one insert basket
- reproducible cleaning results due to equipment system

Delivery:
Set, 22 pieces

High-performance steam jet cleaner

Model series Elmasteam

Application:
For professional steam cleaning in industrial environments. Particularly suitable for pre-cleaning of components with stubborn contamination, cleaning baths and quality improvement when using demulsifying cleaning chemicals.

Execution:
- two selectable pressure ranges: soft 4–6 bar or strong 6–8 bar, adjustable in steps of 0.5 bar
- Housing made from durable stainless steel
- Flexible handle with 1.4 m hose length
- Device and safety equipment TÜV-tested according to DIN EN 61010-1

Advantage:
- 3-year warranty if used correctly
- stable steam availability through strong heating power
- perfect for use even in small spaces
- environmentally-friendly without the use of chemicals
- ECO mode, environmentally friendly, saves energy and costs

Delivery:
tweezers, strainer, maintenance hose, rinsing set; safety screw cap with 3 exchange sealing rings; measuring strip

Type		Elmasteam 8 basic
Pressure reservoir capacity (l)		5
Max. fill capacity (l)		3.8
Min./max. operating pressure		4-8 bar

Test case for measuring fluids

Application:
The standard test case offers everything you need to measure in accordance with TRGS611. Various different versions provide you with even more options. You can also digitally measure conductivity and pH value, testing more quickly and reliably with the digital refractometer. (Options)

Execution:
- **Ident. No. 181: Standard case contents:** 1x analogue refractometer with LED lighting, 0–18% 1x measuring strip pH 7 0–14.0 (100 pieces), 1x measuring strip hardness 0–28°dH (100 pieces), 1x measuring strip nitrite 0–25 mg/l (100 pieces), 2x sample glass 50 ml with wide neck for sampling, 1x plastic measuring cup, 250 ml, 1x digital thermometer, black (-50°C up to +110°C), 1x LED pocket torch titanium, incl. 3 AAA batteries, 1x calculator Solar Mini, 1x safety goggles, one size, 1x nitrile disposable gloves, black – 5 pairs
- **Ident. No. 182: Suitcase contents for Exclusive:** See Standard case, additionally each: 1x conductivity meter, 0–1999 us/cm, 1x pH measuring instrument, 0–14 pH, 1x buffer solution pH 4 and 7, 50 ml (for adjusting pH measuring instrument)
- **Ident. No. 183: Suitcase contents for Premium:** See Standard case, additionally each: 1x conductivity meter, 0–1999 us/cm, 1x pH measuring instrument, 0–14 pH, 1x buffer solution pH 4 and 7, 50 ml (for adjusting pH measuring instrument), 1x digital refractometer, 0–50%

Advantage:
- Robust, high quality and compact
- Conforms to TRSG611
- Improves performance and saves money

Fluids service case

Application:
For testing emulsions in line with TRGS 611.

Execution:
- Thermometer to determine the temperature of the samples
- 100 each of nitrite and nitrate test rods
- 100 each of pH and water hardness test rods
- Plastic cup for sampling
- 3 x plastic bottles for sampling
- Pipette
- Maintenance and service plan for coolants
- Technical regulations TRGS 611

Advantage:
- Reliable detection of emulsion suitability
- Enables early reaction and saves significant costs

ORION® Digital-hand-held refractometer

Application:
The ORION digital hand-held refractometer enables a quick check of emulsion concentrations in coolants and lubricants. The concentration can be read from the hand-held refractometer display.

Execution:
- TFT colour display
- Brix measuring range: 0-45%
- Brix division: 0.1%
- degree of protection IP65

Advantage:
- quick and safe concentration testing
- prevents rust caused by insufficient concentration
- factory-calibrated, for immediate use
- integrated temperature display for reliable determination of the measured value
- long battery life approx. 3750 measurements

Delivery:
incl. calibration solution, pipette, storage case, 2x AAA batteries, leather case, screwdriver and cleaning cloth

YOU MOVE MANKIND.
WE HAVE WHAT IT TAKES.
Do you need more than just a hammer, pair of pliers or a screwdriver?
We have the full range for you. Machining tools, handling systems and
measuring technology. However, we also offer tailor-made system solutions,
large and small machinery and complete factory equipment.
In total, more than 120,000 products.

Engineering vices

On ball joint

Application:

Ident. No. 045–050: Facilitates a range of working processes in precision mechanics, laboratories, testing fields and all electronic/mechanic workshops.

Ident. No. 081–086: Facilitates a range of working processes in precision engineering, laboratories, testing fields and all electronic/mechanic workshops.

Execution:

- **Ident. No. 045–050:**
  - Lightweight design
  - For clamping or screwing on
- **Ident. No. 081:**
  - Table top thickness: up to max. 80 mm, working radius: 330 mm (from centre of ball)
  - Screw-on clamping foot
- **Ident. No. 081–086:**
  - Clamping pressure/clamping force: 12,000 N
  - Cast aluminium with chromed steel parts,
  - Colour: textured powder coat in metallic dark grey
  - With clamping pins, replaceable clamping jaws, centring eye and outstanding ball clamping force
  - The four clamping horns adapt to the shape and size of the product. They can be rotated on their axis and keep a firm grip on every object. The centring eye ensures that the work is perpendicular
- **Ident. No. 086:** For screwing on (base plate 190 x 155 mm, through holes dia. 10 mm), working radius: 330 mm (from centre of ball)

Advantage:

- Vice can be rotated by 360° to all sides and swivelled by 90° thanks to firmly integrated ball joint
- **Ident. No. 045, 081:** Quick, flexible mounting of the vice on the workbench with no damaged sustained
- **Ident. No. 086:** The ball is held and released with a simple lever movement.

Technical data:

- Colour: Grey

Magnetic vice jaws

Application:
For simple and quick attachment to all vices.

Execution:
- With integrated permanent magnet
- **Ident. No. 100–140:**
  - Made from elastic, durable, age-resistant polyurethane
  - Restores the original shape after deformation by pressure
  - The ribbing grips the clamped parts without damaging them
- **Ident. No. 200–250:**
  - One horizontal and three vertical prisms in different sizes allow safe clamping of round and oval components
  - The 90° recess at the top end of the jaws allows easy horizontal clamping of flat material
- **Ident. No. 200–250, 500–550:** Aluminium with a hardness between copper and lead
- **Ident. No. 300–350:**
  - Aluminium body with clamping surfaces consisting of synthetic special rubber
  - The workpiece is held securely even with low clamping pressures
- **Ident. No. 400–450:**
  - Aluminium body with clamping surfaces consisting of fibre with a special layered structure
  - The fibreglass coating does not deform even when clamping heated workpieces
- **Ident. No. 500–550:**
  - Six recessed grooves hold the workpiece securely
  - A deeper groove is used to securely clamp e.g. thin shafts

Advantage:
- Precise and gentle clamping

Delivery:
In pairs

Pipe vice
Hinged, die-forged

Application:
For clamping and machining pipes.

Execution:
- Drop-forged
- Hardened and milled steel jaws
- Spindle with rolled trapezoidal thread
- For screwing onto a table

Advantage:
- Hasp closes automatically when the upper section is shut

Suitable for max. pipe external Ø (mm)		50	75

Prod. Gr. 516

ATORN Malleable iron screw clamp

With anti-slip and spindle safety device

Application:
For rigidly clamping various workpieces together.

Execution:
- Heavy-duty version with groove-reinforced malleable-iron arms
- Profile rail with corrugation, galvanised surface
- Smooth-running, black-oxide steel spindle with trapezoidal thread
- Clamping jaws with plastic protective caps
- Clamping force up to 6000 N

Advantage:
- Ergonomic 2-component handle for optimum power transmission

Technical data:
- Material of handle: 2-component plastic

Max. clamping width (mm)		120	160	200	250	300	400	500	600	800

Prod. Gr. 5HJ

Quick-action screw clamps

With non-slip device from size 160x80 mm, spindle with black oxide finish

Application:
For rigidly clamping various workpieces together.

Execution:
- Upper and lower sections made from high-quality malleable cast iron
- Corrugated section provides additional resistance to torsion
- Galvanised, sturdy, twist-resistant profile rail with 6-ply corrugation
- Burnished spindle
- **Ident. No. 100–400:** With plastic protective caps
- **Ident. No. 420–560:** In accordance with DIN 5117

Advantage:
- **Ident. No. 160–560:** With original Bessey anti-slip protection

ATORN All-steel screw clamp

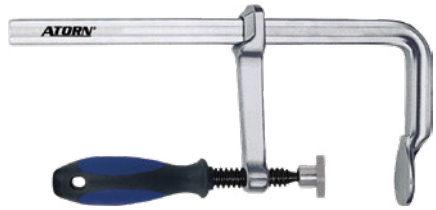
With anti-slip and spindle safety device

Application:
For sprung and elastic clamping of a range of workpieces.

Execution:
- Fixed clamp made of cold-drawn profile steel, hardened and galvanised
- Sliding clamp drop-forged, hardened and galvanised
- Movable pressure plate with integrated spindle safety device
- Smooth-running, black-oxide steel spindle with trapezoidal thread

Advantage:
- Ergonomic 2-component handle for optimum power transmission

Technical data:
- Material of handle: 2-component plastic



Max. clamping width (mm)		120	160	200	250	300	400	500	600

Prod. Gr. 5HJ

All-steel screw clamp

Cold drawn steel

Application:
For sprung and elastic clamping of a range of workpieces.

Execution:
- Fixed and sliding bars made from tempered steel
- Clamping force up to 6,000 N

Advantage:
- Optimised blade profile for 20% more clamping force per spindle revolution
- Force transmitted to the sliding bar in a straight line for optimum safety

Technical data:
- Material of handle: Wood

Prod. Gr. 517

All-steel screw clamps GZ with folding handle

Application:
Quickly and safely generate high clamping forces

Execution:
- The folding handle can be folded down by 90° and turned by 360° without touching the rail
- For fast and comfortable working even in hard-to-reach places.
- Clamping force up to 5,000 N
- Tempered sliding and fixed arms for spring-loaded and elastic clamping
- High-quality 2-component plastic handle
- Folding function for additional lever action when tightening
- Pressure plates can be changed without tools

Technical data:
- Overhang: 120 mm
- Rail cross-section L x W: 24.5 x 9.5 mm
- Material of handle: 2-component plastic

Max. clamping width (mm)		250	300	400	500

Prod. Gr. 517

Gear clamp GearKlamp GK

For use in confined spaces

Execution:
- Patented mechanism that separates the handle from the spindle and positions it around the track
- Secure hold of round, pointy and edgy parts through cross prism at the top
- Glass-fibre reinforced polyamide clamping parts as well as tempered steel in the hollow profile track
- 2-component plastic turning handle for safe handling
- Quick-action slide button on the sliding bar and swivelling pressure plate
- Clamping forces up to 2000 N

Advantage:
- Extremely flexible, can be used even in tight spaces

Technical data:
- Overhang: 60 mm
- Rail cross-section L x W: 25 x 12 mm
- Material of handle: 2-component plastic

Max. clamping width (mm)		150	300	450	600
51110...	Ident. No.	515 ●	530 ●	545 ●	560 ●

Prod. Gr. 517

All-steel lever clamp

Application:
For rapid sprung and elastic clamping of a range of workpieces.

Execution:
- Particularly wear-resistant eccentric guarantees a long service life
- More energy saved thanks to optimised rail section
- Even pressure build up, particularly when the clamping width is fully utilised
- Serrated sliding bracket made from drop-forged, tempered steel
- Clamping force up to 8500 N

Advantage:
- Up to five times quicker than conventional screw clamps
- Resistant to vibrations thanks to release lever with anti-slip protection

Max. clamping width (mm)		120	160	200	250	300	400
Overhang (mm)		60	80	100	120	140	120
Rail cross-section L x W		15 x 6 mm	17.5 x 6.8 mm	22 x 8.5 mm	24.5 x 9.5 mm	28 x 11 mm	28 x 11 mm

Prod. Gr. 517

One-handed clamp

Application:
Quick and simple to fix in place and clamp with just one hand.

Execution:
- Pump lever can be actuated from both sides
- Removable, super-elastic protective caps
- Spring-mounted and elastic clamping
- Fixed arm and pressure plate made from a single piece and tempered
- Clamping force up to 3,500 N

Advantage:
- Ergonomic two-component handle for optimum force transmission
- Quick-action slide button

Max. clamping width (mm)		300	600
Overhang (mm)		100	100
Rail cross-section L x W		19.5 x 9.5 mm	19.5 x 9.5 mm

Prod. Gr. 517

ORION® Parallel clamp

Application:
For clamping a wide variety of workpiece shapes.

Execution:
- With fine-threaded spindle
- Swivel-mounted clamping jaws
- Clamping jaws with four different surfaces: Smooth, ribbed, cross-over and v-block
- Galvanised bar

Advantage:
- Precise and powerful clamping

Min./max. clamping width		0-25 mm	0-50 mm	0-75 mm	0-100 mm	0-150 mm

Prod. Gr. 598

All-steel high-performance clamps

Application:
For powerful clamping of a range of workpieces.

Execution:
- Movable locking handle
- Fixed part in tempered steel
- Sliding bar in forged tempered steel
- Tempered spindle
- **Ident. No. 025–030:** Clamping force up to 12,000 N

Advantage:
- Optimised blade profile, 20% more clamping force per spindle revolution
- Heat-resistant, movable special pressure plate with hardened, oil-soaked sintered steel inlay for a long service life

Max. clamping width (mm)		250	300	500	800
Overhang (mm)		140	140	140	140

Prod. Gr. 517

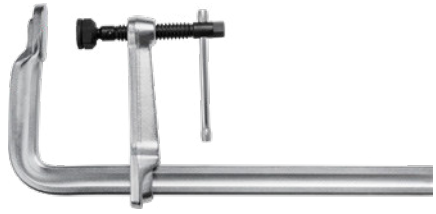
Structural steel bar clamps

Heavy-duty version

Application:
For powerful clamping of a range of workpieces.

Execution:
- Movable locking handle
- Fixed part in tempered steel
- Sliding bar in forged tempered steel
- Tempered spindle
- Clamping force up to 22,000 N

Advantage:
- Heat-resistant, movable special pressure plate with hardened, oil-soaked sintered steel inlay for a long service life



Max. clamping width (mm)		300	400	500	600	800
Overhang (mm)		175	175	175	175	175

Prod. Gr. 517

Assembly clamps
The flexible spring clamp

Application:
For flexible, gentle clamping of a wide range of small workpieces.

Execution:
- Ergonomically shaped two-component handle
- Constant clamping force
- Superpolyamide clamping arms

Advantage:
- Softpads for particularly gentle clamping with delicate surfaces
- **Ident. No. 060–100:** Variable clamping width can be continuously adjusted on one side
- **Ident. No. 110:** Variable clamping width can be continuously adjusted on both sides
- **Ident. No. 120–130:** Long, pointed clamping arms for working in narrow gaps and areas close to edges

ORION® Assembly clamp
For rapid clamping and locking operations

Application:
For simple and rapid clamping of a wide range of workpieces.

Execution:
- Pressed sheet steel, galvanised
- Consistent and constant pressure thanks to in-built spiral spring

Max. clamping width (mm)		30	50
51127...	Ident. No.	010 ●	020 ●

Prod. Gr. 518

All-steel C screw clamps
Die-forged

Execution:
- Very high clamping forces achievable owing to solid design
- Extremely robust and durable
- Spindle with T-handle
- Clamping force up to 22,000 N

Max. clamping width (mm)		40	60	80	100
Overhang (mm)		40	55	65	75

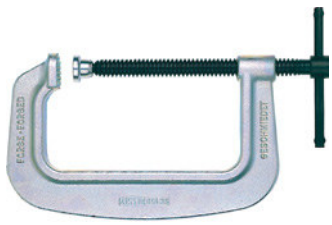
Prod. Gr. 517



EZS one-handed clamp

Execution:
- Ergonomically shaped 2C handle behind the rail
- One-handed clamping and bracing of workpieces with clamping forces of up to 2000 N
- Upper section can be converted from clamping to bracing without tools
- With removable protective caps on clamping surfaces

Max. clamping width (mm)		150	300	450	600
Overhang (mm)		80	80	80	80
Rail cross-section L x W		6 x 19 mm	6 x 19 mm	6 x 19 mm	6 x 19 mm

Prod. Gr. 517

KliKlamp magnesium lever clamp

Application:
Quick and gentle clamping.

Execution:
- Robust fixed and sliding bars in light magnesium
- Clamping force up to 1200 N
- Multi-stage, vibration-proof VIBRAFIX engaging mechanism
- Fixed part with cross-over V-block also holds round, pointed or sharp-edge parts
- Ergonomically shaped, fibre glass-reinforced polyamide clamping arm

Advantage:
- Extremely lightweight yet very strong
- Easy to use and proportion

Ident. No. 112

Max. clamping width (mm)		120	160	200	250	300	400

Angle clamp

Application:
Versatile clamping device for holding, setting and aligning parts at **angles** in relation to one another.

Execution:
- **Ident. No. 020:**
  - Plastic-coated metal jaws
  - Nut and guide joint made from fibre glass-reinforced polyamide
- **Ident. No. 100–120:**
  - Galvanised metal version
  - Copper-plated spindle
- **Ident. No. 120:** Angle range can be adjusted from 5° to 180°

GEDORE Two-legged pullers

Application:
For internal and external extraction of washers, wheels, ball bearings.

Execution:
- Strong, drop-forged design
- For key actuation

Advantage:
- Can be used as external or internal extractor by switching the hooks
- Setting scale for even hook adjustments
- With hook stop to secure against unwanted slippage; pressing the button moves the hook

Max. external clamping width (mm)			100	140	170	210	250	340	520
Max. internal clamping width (mm)			140	180	220	260	340	430	610

GEDORE Two-arm puller set

For various clamping depths

Application:
For internal and external extraction with a range of clamping depths.

Execution:
- For key actuation
- 2 puller hooks with 100, 200 and 250-mm clamping depth

Advantage:
- With extremely narrow, reversible puller hooks for use as external and internal extractor

Delivery:
In cardboard box

Min./max. clamping width		30-130 mm
Min./max. clamping depth		50-250 mm

Two-arm and three-arm universal puller set

For various clamping depths

Application:
For universal pulling tasks for a range of clamping depths.

Execution:
- For key actuation
- Slim S-shaped puller hooks at multiple clamping depths for narrow gaps
- can also be used as internal extractor by reversing the hooks
- Internal clamping width, then 70-180 mm

Advantage:
- With extra-long spindle
- Two legs for especially space-saving working processes
- Three legs for even load distribution and particularly secure hold on the part being removed

Min./max. clamping width		120-130 mm
Min./max. clamping depth		100-350 mm
Max. clamping depth (mm)		350

Prod. Gr. 5JA

Two-arm pullers

With puller hooks in standard lengths

Application:
For universal internal and external extraction of gear wheels, ball bearings, bearings etc.

Execution:
- Strong version, special steel
- Strong spindle and movable spindle tip
- Spindle head with collar (anti-slip protection)
- Sliding puller hooks (that remain parallel) and large contact surfaces for smooth pulling tasks
- **Ident. No. 010–060:** Fixed hook fastening once the screws are tightened

Advantage:
- Tie-bar with hexagonal socket for holding
- Can be used as external and internal extractor
- **Ident. No. 100–230:** Quick to loosen and move the hooks using the manual setting knurl without the need for a screw wrench
- **Ident. No. 200–230:** For narrow gaps

Prod. Gr. 5JA

Slide hammer set

10-piece slide hammer set for internal extractors and needle bearing extractors, in a plastic case

Application:
For extracting close-fitting ball bearings, rings, bushings and parts with centred threaded holes.

Execution:
- Suitable for all hole diameters
- Thread inserts and connectors M3, M4, M5, M6, M7, M8, M10,15.16 G
- Slide hammer with striking weight, 0.9 kg

Advantage:
- Can also be used where a strong shock effect is required
- Can be used anywhere threaded pins can be screwed straight into the part being removed
- Ergonomically shaped slide block for optimum force transmission
- Pinching and deep holes are prevented, as the slide hammer bar completely disappears into the slide block during striking

Impact length (mm)		230
Number of pieces in assortment/set (PCS)		10

ZENTEN Pipe cutter

For thin-walled Al, Cu, stainless steel metal pipes

Application:
For cutting pipes with a clean cut.

Execution:
- For thin-walled metal pipes (aluminium, copper, INOX)
- **Ident. No. 410–450:**
  - With cutting wheel and two guide rollers
  - Die-cast zinc body, carriage and rotary knob
  - Steel-mounted spindle
- **Ident. No. 500:**
  - With cutting wheel and four guide rollers for optimum grip on the pipe
  - Magnesium die-cast body – lightweight yet with identical stress properties
  - Steel-mounted spindle, removable deburring tool.

Advantage:
- Quick cutting wheel replacement without needing tools thanks to Instant Change (IC) system
- **Ident. No. 410:** Compact design allows for considerably smaller working radius
- **Ident. No. 410–450:** Ergonomic rotary knob for optimum force transmission
- **Ident. No. 440, 500:** With spare cutting wheel in rotary knob

RIDGID 2-in-1 miniature pipe cutters

Application:
For particularly easy cutting of pipes with a clean cut.

Execution:
- Robust, lightweight carriage and wheel housing
- Cutting wheel and two guide rollers
- For copper and aluminium pipes
- Not suitable for composite pipes

Advantage:
- The mini pipe cutter can either be used alone or together with the ratchet
- With automatic feed using spring mechanism
- Particularly effective in confined areas thanks to the ratchet

Suitable for min./max. pipe outer Ø		6-28 mm
57019...	Ident. No.	010 ●

Prod. Gr. 5JR

Accessories for		57019 010

ZENTEN Pipe cutter

For plastic and composite pipes

Application:
For cutting pipes with a clean cut.

Execution:
- For synthetic and compound pipes
- Cast aluminium body
- Die-cast zinc slide and rotary knob
- **Ident. No. 101:** With four guide rollers for optimum grip on pipe
- **Ident. No. 102:** With two fixed guide rollers and one adjustable guide roller

Advantage:
- Conical rotary knob for improved force transfer
- Quick cutting wheel replacement without needing tools thanks to Instant Change (IC) system
- Includes fully removable deburring tool
- With quick-action feed system
- **Ident. No. 101:** With spare cutting wheel in rotary knob
- **Ident. No. 102:** PTFE-coated pinion type cutters

Technical data:
- Model: kompakt+ quick

ZENTEN Pipe cutter

For INOX stainless steel pipes

Execution:
- For thin-walled INOX stainless steel pipes
- With needle bearing-mounted cutting wheel with special cutting geometry
- With four needle bearing-mounted guide rollers for easy and quick cuts
- Steel-mounted spindle
- **Ident. No. 035:** Die-cast magnesium body
- **Ident. No. 076:** Cast aluminium body

Advantage:
- Conical rotary knob for improved force transfer
- Quick cutting wheel replacement without needing tools thanks to Instant Change (IC) system
- With spare cutting wheel in rotary knob
- Includes fully removable deburring tool
- **Ident. No. 076:** With quick-action feed system

ZENTEN RAPTOR plastic and composite pipe cutters

Application:
For cutting pipes without warping the pipe.

Execution:
- Made from die-cast magnesium with INOX blade
- Optimum force transmission
- 100% straight cut
- **Ident. No. 110:** With progressive, gear-driven blade feed

Advantage:
- Easy cutting thanks to PTFE-coated blade
- Tools not needed to change blades
- **Ident. No. 110:**
  - Blade quickly retracts at the push of a button
  - Handle with ergonomic rubber inlay

ZENTEN DENAKUT hose and composite pipe cutters

For flexible hoses, thin-walled plastic pipes, composite and corrugated pipes

Application:
Ident. No. 400: For cutting flexible hoses
Ident. No. 410: For cutting flexible hoses and soft plastic tubes
Ident. No. 420: for cutting composite piping and corrugated pipes

Execution:
- **Ident. No. 400–410:**
  - Magnesium die-cast body
  - Blade with optimised cutting geometry and PTFE coating
  - One-handed closure system
- **Ident. No. 410:**
  - Steel bearing axle with needle roller bearings
  - Ergonomic two-component handles with anti-impact absorption
- **Ident. No. 420:**
  - magnesium die-cast body
  - twist and cut system: 4 needle bearing guide rollers make it easy to rotate the pipe when cutting
  - one-handed closure system
  - blade with optimised cutting geometry and PTFE coating
  - steel bearing axle with needle roller bearings
  - with 4 x 3-edged blades on the inside of the handle, protective corrugated pipes from 8 to 35 mm can be cut without damaging the inner tube
  - ergonomic two-component handles with anti-impact absorption

Advantage:
- **Ident. No. 400–410:** Easier, faster and more precise cutting with minimal application of force
- **Ident. No. 420:** easier, faster and more precise cutting with minimal application of force

ATORN Pipe and hose cutters for professional users

With interchangeable blade

Application:
For cutting at right angles without deformation of the pipe

Execution:
- Universal support for right-angled positioning
- Ergonomic handle design
- Automatic opening by spring mechanism
- Low manual force thanks to optimum lever transmission
- Permanently sharp blade with long service life
- Wide range of applications from 4–20 mm diameter
- Suitable for all standard liquid, multi-layer and pneumatic hoses/pipes
- Rectangular blade as spare part - art. no. 53139100, triangular blade for softer materials - art. no. 53139110

Advantage:
- Light and precise cut
- Up to 20,000 cuts through composite pipe without the need to change blades

Delivery:
With rectangular blade

Technical data:
- Suitable for min./max. pipe outer diameter: 4-20 mm
- Length: 185 mm

53139...	Ident. No.	010 ●

Prod. Gr. 520

ZENTEN Pipe deburring tools

Application:
For deburring pipes inside and out.

Execution:
- ABS plastic body with three in-laid Solingen blades
- For hard plastic pipes and soft metal pipes

57033...	Ident. No.	010 ●

Prod. Gr. 580

RIDGID Pipe deburring tools

Application:
For copper and stainless steel pipes

Execution:
- Hardened steel construction, internal/external deburrer
- 46 blades on the hardened cone enable quick and clean deburring from inside and internal chamfering.
- Non-slip external knurling on housing

57033...	Ident. No.	110 ●

Prod. Gr. 5JR

ZENTEN Chalk line reel with coloured powder

Application:
For simple marking of lines.

Execution:
- Lightweight and low-wear die-cast magnesium housing
- When pressure is applied to the axis, the line can be drawn out in idle mode, without the crank rotating
- Storage space for hook integrated in body
- Large inner capacity for colour powder

Advantage:
- Quick-action retraction with 5:1 ratio
- Hardened hook with curved spikes (can be nailed onto edges)
- 3-part set with chalk line roller and 2 x 250-g bottles of colour powder, in blue and red

Technical data:
- Cord length: 30 m
- Contents: 500

57041...	Ident. No.	010 ●

Prod. Gr. 580

KNIPEX Pipe cutter
with interchangeable blade

Application:
Ident. No. 010: For burr-free cutting of thin-walled plastic pipes and hoses (incl. fabric-reinforced) up to 25 mm.
Ident. No. 020: For burr-free cutting of plastic pipes from 6–35 mm

Execution:
- **Ident. No. 010:**
  - Wedge-shaped blade made from special tool steel, oil-hardened
  - Tool body: Plastic, glass fibre reinforced
  - Not suitable for cutting cables
  - With opening spring and catch
- **Ident. No. 020:**
  - Low effort required thanks to special cutting edge geometry and optimum transmission
  - Ergonomic grip design and step-by-step blade feed
  - Blade can be retrieved from any position

Advantage:
- **Ident. No. 010:** Straight and clean cut without deformation

Karnasch angle bender 100 E

Bending machine to meet exacting requirements and for professional applications

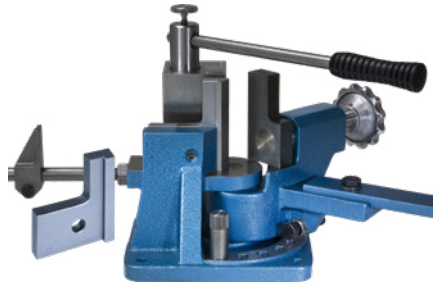
Application:
For cold and warm bending

Execution:
- Basic body and bending arm cast and milled from spheroidal graphite iron (no grey cast iron)
- Bending performance with radius jaw: Flat steel 100 x 6 mm or 50 x 12 mm, hot 100 x 12 mm or 60 x 20 mm
- Round steel: 18 mm, hot: 30 mm
- Using the included sharp-edged jaw: sheets up to maximum thickness of 2 mm
- With holes for workbench mounting
- Can be used immediately with basic equipment provided
- Dimensions: 290 x 260 mm (length x width), bending lever: 710 mm, longitudinal stop: 440 mm

Advantage:
- The low tare weight of the spheroidal graphite iron still allows optimum bending performance
- Using high-grade steel that has undergone subsequent heat treatment,
- it is possible to keep the dimensions of the bending jaws small.
- Tightest Z and U-bends are therefore possible

Delivery:
Bender with bending lever, sharp-edged jaw, radius jaw r = 4 mm, longitudinal stop, bending stop, on-board tool

Technical data:
- Max. flexible cross-section: 100 x 10 mm
- Max. bend angle: 60 Degree
- Weight: 25 kg



57586...	Ident. No.	200 ●

Prod. Gr. 5IF

ORION® Single open-end wrench (DIN 894)

15° jaw angle

Execution:
- Special steel
- Strong shank with double-T profile

Advantage:
- Shaft profile creates excellent bending rigidity
- Good force transfer
- Non-slip feel

Technical data:
- Jaw position: 15 Degree
- Surface: Burnished
- Material: Chrome-vanadium steel

ATORN Double open-end wrench (DIN 3110)

Jaw angle 15° at both ends

Execution:
- With completely new special surface
- Maximum resistance against contact corrosion
- 15x greater corrosion protection against exposure to temperature, road salt and environmental influences compared to conventionally coated keys
- Up to 720 hours in the salt spray test in accordance with DIN EN ISO 9227
- Environmentally friendly chromium-VI-free coating process
- Made from chromium-vanadium steel, die-forged and hardened.

Advantage:
- Extremely durable and robust industrial design

Technical data:
- Jaw position: 15 Degree
- Material: Chrome-vanadium steel
- Surface: Special coating according to specifications

Prod. Gr. 526

ATORN Double open-end wrench sets (DIN 3110)

Jaw angle 15° at both ends

Application:
For tightening and loosening all types of screw connections

Execution:
- With completely new special surface
- Maximum resistance against contact corrosion
- 15x greater corrosion protection against exposure to temperature, road salt and environmental influences compared to conventionally coated keys
- Up to 720 hours in the salt spray test in accordance with DIN EN ISO 9227
- Environmentally friendly chromium-VI-free coating process
- Made from chromium-vanadium steel, die-forged and hardened.

Advantage:
- Extremely durable and robust industrial design

Technical data:
- Jaw position: 15 Degree
- Surface: Special coating according to specifications
- Material: Chrome-vanadium steel
